Chapter 95: TYRANNY

INTRODUCTION

IF any point in political theory is indisputable, it would seem to be that tyranny is the worst corruption of government—a vicious misuse of power and a violent abuse of the human beings who are subject to it. Aristotle's remark that "no freeman, if he can escape from it, will endure such government," would seem to express the sentiments of all who, loving liberty and abhorring slavery, look upon tyranny as destroying the one and establishing the other.

Certainly the word "tyranny" is seldom if ever used eulogistically. Such phrases as "a just tyranny" or "a good tyrant" are at once seen to be as self-contradictory as "a round square." The great books of history give the impression that tyrants and despots, who vastly outnumber good rulers, are always objects of hate and fear, never of love and admiration. If there are exceptions, if there are peoples who willingly submit to or even deserve the yoke of despotism and tyranny, they are, in the judgment of ancients and moderns alike, politically primitive.

The traditional association of the word "despotism" with "tyranny" requires us to consider whether our understanding of these terms is as uniformly clear as the denunciation of what they denote seems to be universal. Are despotism and tyranny the same? It may be thought that the tyrant must always have despotic power at his disposal, power unlimited by law, so that the lawless ruler is at once both despot and tyrant. But need the despot, the absolute ruler, always rule tyrannically?

The familiar phrase, "benevolent despotism," at once suggests the negative answer, and also some line of distinction between despotism and tyranny. Tyranny can never be benevolent. But despotism may be no worse than paternalism. While its injustice may consist in treating adults, able to govern themselves, as if they were children, it may also derive an air of jus-

tice from the fact that the despot, like the father, rules his subjects for their own good. If he treats them like slaves rather than children, exploiting them to serve his own interests, then he is not a benevolent but a tyrannical despot.

This understanding of the meaning of "despotism" and "tyranny" seems to be only partly supported by their etymology. The Greek word from which "despot" comes signifies the head of a household, the *paterfamilias* (as he is called by the Romans) who exercises the absolute authority of a master over chattel slaves, and of a parent over his children. In contrast, the Greek word *tyrannos* refers to the ruler of a state rather than a family, and is sometimes used as if it were equivalent in meaning to "king." Yet both words carry the connotation of absolute power, and when, in addition, the subjects of a tyrant are considered to be no better off than slaves, the difference in the meaning of the two words almost disappears.

The difficulty of grasping what is essential to the nature of tyranny and despotism seems to be complicated by certain criteria, originally proposed by the Greeks, for distinguishing between king and tyrant, or between royal and despotic rule. Both Plato and Aristotle speak of the king as a good monarch and the tyrant as a bad one. Both say that monarchy, or rule by a single man, is royal when it is for the welfare of the ruled and tyrannical when it serves only the interests of the ruler. Both make lawlessness—either a violation of existing laws or government by personal fiat without settled laws—a mark of tyranny.

Yet, for Aristotle at least, some of these criteria also apply to despotism, and even to royal government, insofar as these are distinguished from political or constitutional government—government by law rather than by men. Furthermore, the association of either tyranny or

despotism with monarchy—rule by *one* man, whether just or unjust—seems to be counterbalanced by Aristotle's discussion of the tyranny of the *few* and of the *many*. In a monarchy, the king can turn tyrant; but so can the wealthy become despotic in an oligarchy, or the poor in a lawless democracy.

The nature of tyranny thus seems to be more difficult to define precisely than would at first appear from the almost universal condemnation of it as the worst perversion of government.

To some extent, the difficulties may be verbal. The word "tyranny" is used with many meanings, not only by the Greeks, but throughout the tradition of the great books. Some writers identify tyranny and despotism; some distinguish the two sharply. Some writers consider tyranny and despotism only in connection with monarchy; some extend the consideration to other forms of government. The words are sometimes used descriptively, without the connotation of good or evil; and sometimes they are more derogatory than descriptive.

Even when the necessary verbal clarifications are achieved, genuine issues still remain. Conflicting accounts are given of the causes of tyranny or the circumstances from which it develops. Concerning despotism, some writers take the position that it may be justified by conquest, or by the need of a people for absolute government, or, in the form of a temporary dictatorship, by emergency conditions. Not even the condemnation of tyranny seems to be unanimous, if the views of Hobbes are to be reckoned with; nor, among those who condemn tyranny, is the fairly general approval of tyrannicide free from the strong dissenting voice of Kant.

THE FOREGOING INDICATES how the notions of tyranny and despotism are involved in other chapters dealing with the various forms of government and, in addition, such chapters as JUSTICE, LIBERTY, and SLAVERY. The distinction, for example, between domestic and political slavery bears on one of the ways in which despotism and tyranny are distinguished; and the discussion in the chapters on MONARCHY and CONSTITUTION concerning absolute and limited government raises a question which must also be considered here, namely, whether absolute

monarchy can be distinguished from despotism and whether it has an inveterate tendency to become tyrannical.

That question deserves immediate attention, because its answers are connected with opposed views of the justice or defensibility of tyranny and despotism. Plato and Aristotle, for example, treat tyranny as the prototype of political injustice, and the tyrant as the extreme case of the vicious man; yet there are passages which appear to have a contrary tenor. In the *Laws*, the Athenian Stranger proposes a good tyrant as the best means for establishing the laws. To the question, "What are the conditions which you require in a state before you can organize it?" he thinks the legislator's answer should be: "Give me a state which is governed by a tyrant, and let the tyrant be young and have a good memory; let him be quick at learning and of a courageous and noble nature"—in short, let him have temperance and every other virtue.

More readily than monarchy, democracy, or oligarchy, tyranny is the stepping stone to the best state, according to the Athenian Stranger, because it involves the greatest power concentrated in a single man. The combination of virtue and power may rarely be found, but, he says, "when the supreme power in man coincides with the greatest wisdom and temperance, then the best laws and the best constitution come into being, and in no other way."

Aristotle's classification of the types of kingship, or the forms of royal government, seems to include tyranny among them. He refers to the kind of monarchy which prevails among the barbarians who, "being more servile in character than Hellenes . . . do not rebel against a despotic government. Such royalties," he goes on, "have the nature of tyrannies because the people are by nature slaves, but there is no danger of their being overthrown, for they are hereditary and legal." Even among the Hellenes in ancient times, Aristotle points out, there was a form of monarchy or "dictatorship" that may be defined "as an elective tyranny, which like the barbarian monarchy, is legal, but differs from it in not being hereditary."

These two forms of tyranny, Aristotle says elsewhere, "are both according to law, and therefore easily pass into royalty." The line be-

tween king and tyrant is not, however, as shadowy as might first appear. "Kings rule according to law over voluntary subjects, but tyrants over involuntary; and the one are guarded by their fellow citizens, the others are guarded against them." The forms of monarchy which Aristotle also calls "tyrannies" seem to him to have a mixed character. "They are royal," he says, "in so far as the monarch rules according to law over willing subjects; but they are tyrannical in so far as he is despotic and rules according to his own fancy." But there is also a kind of tyranny which, being unmixed, is "the counterpart of perfect monarchy. This tyranny is just that arbitrary power of an individual which is responsible to no one, and governs all alike, whether equals or better, with a view to its own advantage, not to that of its subjects, and therefore against their will."

Aristotle explains his association of tyranny with monarchy on the ground that "both are forms of one-man rule, but," he adds, "there is the greatest difference between them; the tyrant looks to his own advantage, the king to that of his subjects." Tyrannical government is "monarchy exercising the rule of a master over political society," and therefore deserves to be called "despotic" as well as tyrannical. When it has no admixture of royalty, tyranny is not only self-serving but lawless rule. It is "the very reverse of a constitution," or rule by law. Except for the hypothetical case in which the truly superior, the almost god-like man is king, Aristotle seems to identify absolute or unconstitutional monarchy with tyranny and despotism, and he condemns both for violating the very nature of the state conceived as "a community of free men."

THE LINE BETWEEN KING and tyrant is similarly drawn by Plato. Monarchy for him "divides into royalty and tyranny" according as one man rules by law or lawlessly, over voluntary or involuntary subjects. If the one man were like a god in relation to other men, it would be fitting for him to rule the state by his wisdom or science and without recourse to laws. "If there could be such a despot," the Eleatic Stranger says in the *Statesman*, "he alone would be the happy ruler of a true and perfect state," but men "can never be made to believe that

any one can be worthy of such authority." (History suggests the contrary in such cases as Caesar, Napoleon, and Hitler.)

Giving the name of "king" to the monarch who abides by and maintains established laws, the Stranger gets Socrates to agree that the ruler should be called a "tyrant" when he "governs neither by law nor by custom, but, imitating the true man of science, pretends that he can only act for the best by violating the laws, while in reality appetite and ignorance are the motives of the imitation."

In the *Republic*, Socrates refers to Euripides' praise of "tyranny as god-like," and gives, as another reason for excluding the poets from the state, the fact that "they are the eulogists of tyranny." Far from being god-like, the tyrannical man is described by Socrates as "drunken, lustful, passionate." Tyrants "are always either the masters or servants and never the friends of anybody; the tyrant never tastes of true freedom or friendship." Oriental despotism, Hegel later writes, appears to give freedom to one man, but "the freedom of that one is only caprice, ferocity--brutal recklessness of passion. . . . That *one* is therefore only a despot; not a *free man*."

According to Plato, tyranny is not only the greatest evil a state can suffer, but the tyrant is also the unhappiest of men. "Will not he who has been shown to be the wickedest," Socrates asks, "be also the most miserable?" Polus, in the *Gorgias*, tries to prove that, like the successful criminal who goes unpunished, the tyrant who does injustice to everybody, but suffers none, achieves more happiness than other men. But Socrates, taking the position that it is better to suffer than to do injustice, argues to the contrary that the tyrant is more miserable than those whom he oppresses.

If this is true, the confirmed tyrant is probably the man least able to perceive or acknowledge it. Plutarch reports the story of Plato's first meeting with Dionysius, the tyrant of Syracuse. When Plato tried to prove to him that "tyrants, of all men, had the least pretence to virtue," and that, since they lacked justice, they suffered "the miserable condition of the unjust," Dionysius would not hear the argument out. "He asked the philosopher in a rage," Plutarch relates, "what business he had in Sic-

ily. To which Plato answered, 'I come to seek a virtuous man.' 'It seems, then,' replied Dionysius, 'you have lost your labor.'" According to Plutarch, Dionysius tried to have Plato killed on his return voyage to Greece; or failing that, to have him sold into slavery. He would not be harmed by that, Dionysius reasoned, because, "being the same just man as before, he would enjoy his happiness, though he lost his liberty."

ON THE WHOLE, THEN, Aristotle's and Plato's disapproval of tyrants and tyranny seems to be unequivocal. The passages which might cause this to be questioned can perhaps be accounted for by the ancient tendency to use the word "tyrant" descriptively to denote the possessor of absolute power. Yet even in the *Laws*, where such usage occurs, Plato observes that kings, unable "to sustain the temptation of arbitrary power," tend to overthrow the laws and so become tyrannical in the invidious sense of the word.

With the exception of Hobbes, mediaeval and modern writers are no less disapproving than the ancients. "Tyrannical government," according to Aquinas, "is altogether corrupt" and completely lawless. It is the tyrant himself, rather than those who may rebel against a government so lacking in justice, who is "guilty of sedition, since he encourages discord and sedition among his subjects, that he may lord over them more securely." When a king, by becoming a tyrant, "has dethroned himself and put himself in a state of war with his people, what shall hinder them" asks Locke, "from prosecuting him who is no king, as they would any other man who has put himself in a state of war with them?"

In Locke's view, it is a mistake to think that the fault of tyranny "is proper only to monarchies. For wherever the power that is put in any hands for the government of the people and the preservation of their properties is applied to other ends, and made use of to impoverish, harass, or subdue them to the arbitrary irregular commands of those that have it, there it presently becomes tyranny, whether those that thus use it are one or many. . . . Wherever law ends, tyranny begins, if the law be transgressed to another's harm."

Tyranny is thus defined by Locke as "the

exercise of power beyond right, which nobody can have a right to." Such "absolute arbitrary power, or governing without settled standing laws, can neither of them consist with the ends of society and government." Tyranny so defined may not be limited to monarchies; but, according to Locke, absolute monarchy is always tyrannical. For that very reason it is, he writes, "inconsistent with civil society, and so can be no form of civil government at all."

What Locke calls "tyranny" or, without change of meaning, "absolute monarchy," Kant calls "autocracy." But Kant distinguishes the monarch "who has the *highest* power" from the autocrat "who has *all* power." Hegel calls "despotism" that "state of affairs where law has disappeared and where the particular will as such, whether of a monarch or a mob, counts as law or rather takes the place of law." The writers of the *Federalist* use the words "tyranny" and "despotism" interchangeably, but do not vary from the definition which Montesquieu gives of despotic government as "that in which a single person directs everything by his own will and caprice." In all other governments, even in monarchy when it is constitutional, the separation of powers puts some limitation on the power entrusted to the offices of state.

Following Montesquieu's doctrine, Madison declares: "The accumulation of all powers, legislative, executive, and judiciary, in the same hands, whether of one, a few, or many, and whether hereditary, self-appointed, or elective, may justly be pronounced the very definition of tyranny." He reinforces his point by quoting Jefferson's dictum that concentrating "all the powers of government . . . in the same hands, is precisely the definition of despotic government."

HOBBS SEEMS TO BE the one exception in the great books to this variously expressed opinion of the evil of absolute power. Locke may have him in mind when he says that absolute monarchy is "by some men . . . counted the only government in the world." Certainly Hobbes would not repudiate the charge that he thinks none but absolute government feasible; nor is he dismayed by the tendency of other writers

to call absolute government "tyrannical" or "despotic." On the contrary, he dismisses this as so much empty name-calling.

In every form of government, according to Hobbes, the sovereign power must be absolute to be effective. "Though of so unlimited a power, men may fancy many evil consequences, yet the consequences of the want of it, which is perpetual war of every man against his neighbor, are much worse." Describing the absolute dominion of the father over his children, and the equally absolute dominion of the master over his slaves, Hobbes says that "the rights and consequences of both paternal and despotic dominion are the very same with those of a sovereign by institution," for unless the sovereign is also absolute, "there is no sovereignty at all."

To the cry "Tyranny," Hobbes replies that just as men who "find themselves grieved under a *Democracy*, call it *Anarchy*," or those who "are displeased with *Aristocracy*, call it *Oligarchy*, so "they that are discontented under *Monarchy*, call it *Tyranny*." He holds Aristotle's *Politics* responsible for spreading the fallacy of regarding anything except popular government as tyrannical; and in general he blames the Greek and Roman writers for fomenting sedition against kings by treating tyrannicide as lawful.

Hobbes offers an historical explanation of the origin of these confusions. "A *Tyrant*," he writes, originally signified no more simply, but a *Monarch*. But when afterwards in most parts of Greece that kind of government was abolished, the name began to signify, not only the thing it did before, but with it the hatred which the popular states bore towards it; as also the name of King became odious after the deposing of the Kings of Rome."

A word like "tyranny" carries only emotional force. Used descriptively, Hobbes declares, "it signifies nothing more nor less than the name of Sovereignty, saving that they that use the former word are understood to be angry with them they call Tyrants." He is willing to make himself the object of that anger by identifying "a professed hatred of Tyranny" with "hatred to Commonwealth in general," and by regarding the toleration of both hatreds alike as evil seeds of sedition.

IN ONE NEGATIVE RESPECT, Rousseau seems to agree with Hobbes. Not that the man who holds that only republican institutions are legitimate, in any way accepts the identification of either prince or popular government with sovereign power. But he, like Hobbes, rejects Aristotle's distinction between the king and the tyrant as good and bad monarchs, the one governing for the good of his subjects, the other in his own interest. Rousseau contends not only that most Greek authors used "the word *tyrant* in a different sense . . . but also," he adds, "it would follow from Aristotle's distinction that, from the very beginning of the world, there has not yet been a single king."

It is only according to a vulgar usage that a tyrant is conceived as "a king who governs violently and without regard for justice or law." The more precise conception, Rousseau insists, defines the tyrant as "an individual who arrogates to himself the royal authority without having a right to it. This is how the Greeks understood the word 'tyrant'; they applied it indifferently to good and bad princes whose authority was not legitimate. *Tyrant* and *usurper* are thus perfectly synonymous terms."

The usurpation of power is, according to Rousseau, the root of both tyranny and despotism, but they are not for that reason to be confused. "I call him who usurps the royal authority a tyrant," Rousseau writes, "and him who usurps the sovereign power a *despot*. The tyrant is he who thrusts himself in contrary to the laws to govern in accordance with the laws; the despot is he who sets himself above the laws themselves. Thus the tyrant cannot be a despot, but the despot is always a tyrant."

Other writers distinguish between tyranny and despotism on different principles. They accept, where Rousseau rejects, the notion that tyranny is not merely a usurpation of power, but always a self-serving or unjust use of that power. They reject Rousseau's conception of despotism as inseparable from usurpation. Absolute power can be gained and held in other ways.

Locke, for example, conceives despotical dominion as the rule of a master over slaves, or the government of a vanquished people by their conquerors in a just war. "Despotical power," in his opinion, "is an absolute arbitrary power

one man has over another to take away his life whenever he pleases." Unlike tyranny, it is not "power beyond right," for "the conqueror, if he have a just cause, has a despotical right over the persons of all that actually aided and concurred in the war against him." Since, in Locke's view, "a usurper can never have right on his side," despotic dominion, when justified, is not achieved by usurpation.

For Montesquieu, despotisms constitute one of the three major forms of government, the other two being republics (aristocratic or democratic) and monarchies. Though he regards despotism as an intrinsically corrupt form of government, in which the rulers wield personal power without the restraint of law, he also judges it to be appropriate to the servile natures or temperaments of certain peoples. Like Aristotle and Hippocrates before him, he attributes to the climate and disposition of the Asiatic peoples their submissiveness to the worst excesses of despotism.

Montesquieu does not so much condemn despotism as he deplores the conditions which seem to render it necessary or natural for a large part of mankind. He does not suggest, as Mill does, that despotic government can and should serve to civilize those who are as yet unprepared for self-government. Despotism is benevolent, according to Mill, only if it prepares a people for freedom; if it tries to perpetuate itself, it is tyrannical or enslaving.

Though Mill holds the view that, relative to a free society, there cannot be a "good despot" no matter how benevolent his intentions, he also thinks that, in dealing with barbarians, "despotism is a legitimate mode of government . . . provided the end be their improvement, and the means justified by actually effecting that end. Liberty, as a principle, has no application to any state of things anterior to the time when mankind has become capable of being improved by free and equal discussion. Until then, there is nothing for them but implicit obedience to an Akbar or a Charlemagne, if they are so fortunate as to find one."

Under certain "conditions of society . . . a vigorous despotism," according to Mill, "is in itself the best mode of government for training the people in what is specifically wanting to render them capable of a higher civilization."

In his opinion, still other conditions justify despotism. "I am far from condemning," he writes, "in cases of extreme exigency, the assumption of absolute power in the form of a temporary dictatorship." In another place, he says that "the establishment of the despotism of the Caesars was a great benefit to the entire generation in which it took place" because "it put a stop to civil war, and abated a vast amount of malversation and tyranny by praetors and proconsuls."

But in all these cases the essential point is that the despotic rule should be temporary. Mill applies the same criterion to the despotism which occurs in the government of colonial dependencies. It should aim to benefit a subject people by training them in the arts of government, and it should not seek to outlast the conferring of this benefit. "The ruling country," he thinks, "ought to be able to do for its subjects all that could be done by a succession of absolute monarchs, guaranteed by irresistible force against the precariousness of tenure of barbarian despotisms. . . . Such is the ideal rule of a free people over a barbarous or semi-barbarous one."

This may be the ideal, but critics of imperialism, like Swift or Marx, think that colonial policies are in fact otherwise motivated - by land-grabbing, by the desire for national aggrandizement, and by the profits to be made from the economic exploitation of colonies or subject peoples. Throughout the pages of Thucydides and Tacitus, the spokesmen for empire dwell upon the blessings which Athenian or Roman rule bestows, only to be answered by the protests of the colonists or the conquered, who seem to prefer the insecurities and uncertainties of liberty to the mixed motives of even the best despot.

AS ALREADY INDICATED, the political significance of tyranny and despotism is broader than the conception of the tyrant as an unjust king or of the despot as an absolute monarch. The reign of the Thirty Tyrants at Athens and of the Decemviri at Rome are classical examples of oligarchical tyranny. Advocates of republican or democratic institutions, like the writers of the *Federalist* or J. S. Mill, are as much concerned to safeguard constitutional or representative government from the tyranny of special interests—whether of a dominant majority or

of concentrated wealth—as they are to protect the rule of law from the encroachments of despotism which begin with usurpations of power by elected officials.

Moderns and ancients alike fear the susceptibility of the mob to the wiles of the demagogue, who encourages their lawlessness in order to take the law into his own hands. Both Hegel and Plato see in the alliance between a scheming demagogue and an unruly populace the step by which a corrupt democracy turns into a tyranny. Though Aristotle disagrees with what he takes to be the theory of Socrates in the *Republic*, that tyranny normally arises from democracy in the progressive degeneration of the state, his own opinion seems to be that “tyranny is a compound of oligarchy and democracy in their most extreme forms” and that “almost all tyrants have been demagogues who gained the favor of the people by their accusation of the notables.”

These aspects of tyranny are discussed in the chapters on DEMOCRACY and OLIGARCHY. The traditional emphasis, however, is on the individual tyrant, whether he is an hereditary prince who misuses his autocratic power, the usurper of an established throne, or the demagogue who makes himself dictator. However tyranny arises, monarchy is the form it usually takes in the pages of history or poetry—the domination of the state by one man. But while the great political philosophers offer conflicting theories of the origin of tyranny, there seems to be remarkable agreement concerning the methods the tyrant uses to maintain himself in power.

Other political practices may vary greatly from one historical epoch to another, but the devices of tyranny seem to have a certain timelessness. When they are describing the actions of the tyrant, Herodotus, Plutarch, Tacitus, and Gibbon tell stories of iniquity, of cruelty, of cowardly and unscrupulous stratagems, so alike in detail that the reader loses all sense of time and place. Nor need he exert any effort of imagination to place the figure of the tyrant thus delineated in the setting of contemporary events.

The past also speaks with contemporary relevance in Plato's enumeration of the tyrant's desperate measures, his stirring up of foreign

wars to smother domestic discord, his assassination of enemies, his purging of friends or followers, and his confiscation of property as well as his generally indiscriminate blood-letting. The resort to unwarranted searches and seizures, the creation of *ex post facto* crimes, the arrest and punishment of men without trial “have been,” writes Hamilton, “in all ages the favorite and most formidable instruments of tyranny.” So, too, in all ages, the tyrant, fearing reprisal and revenge, lives in a state of war, turns his palace into an armed camp, and goes nowhere without a numerous bodyguard which, as both Aristotle and Machiavelli suggest, functions most efficiently when composed of hirelings or mercenaries.

The great books contain not only the record of tyrannical perfidy and violence, but also recommendations to the would-be tyrant of the best means to use for his nefarious purposes. Though Rousseau refers to Machiavelli's *Prince* as “the book of Republicans,” and thinks that “the choice of his detestable hero, Caesar Borgia, clearly enough shows his hidden aim,” the rules which Machiavelli formulates for the prince seem, on the surface at least, to be essentially similar to the advice Aristotle gives the tyrant.

The end in both cases is the same—success in the effort to gain and keep power. The means, in general, are force and fraud or, as Machiavelli phrases it, the methods of the lion and the fox. Machiavelli counsels the prince “to inspire fear in such a way that, if he does not win love, he avoids hatred.” He tells him that he should appear to keep faith without hesitating to break his promises, that he should avoid flatterers and sycophants, and that he should acquire a reputation for liberality without cost to himself. Not very different is Aristotle's advice to the tyrant—to lop off the heads of those who are too high and to humble all the rest, to sow discord among his subjects, to impoverish the people by multiplying taxes, to employ informers, and to encourage the betrayal of one faction by another.

But in his suggestion of another course for the tyrant to take—the policy of not merely pretending, but of actually trying, to conduct himself like a just king—Aristotle seems to deviate from the spirit of Machiavelli's maxim that

the appearance of virtue is profitable so long as it does not interfere with doing whatever is expedient, however vicious. Yet even here Aristotle says that "the tyrant must be careful . . . to keep power enough to rule over his subjects, whether they like him or not, for if he once gives this up he gives up his tyranny."

The best commentary on these recommendations seems to be indirectly expressed by their

authors. Both Aristotle and Machiavelli draw one striking conclusion from the history of those—call them princes or tyrants—who have tried to put such rules into practice. Whether its collapse is due to the inherent weakness of might without right, as Aristotle suggests, or, in Machiavelli's terms, to the unforeseeable mishaps of fortune, tyranny, of all forms of government, seems to be the shortest-lived.

OUTLINE OF TOPICS

1. The nature and origin of tyranny	PAGE 947
1a. The lawlessness of tyrannical rule: might without right	
1b. The injustice of tyrannical government: rule for self-interest	948
1c. Usurpation: the unauthorized seizure of power	
1d. The character of the tyrannical man: the friends of the tyrant	949
2. Tyranny as the corruption of other forms of government	
2a. The perversion of monarchy: the tyrannical king	
2b. The degeneration of oligarchy: the tyranny of the wealthy	950
2c. The corruption of democracy: the tyranny of the masses or of the majority; the rise of the demagogue	
3. The choice between tyranny or despotism and anarchy	
4. The nature and effects of despotism	951
4a. The relation of despotism to tyranny and monarchy: the benevolence of despots	
4b. The comparison of paternal and despotic dominion: the justification of absolute rule by the incapacity of the ruled for self government	
5. The contrast between despotic and constitutional government: government by men and government by laws	952
5a. Despotic and constitutional government with respect to political liberty and equality: the rights of the governed	
5b. Despotic and constitutional government with respect to juridical defenses against misgovernment, or redress for grievances through due process of law	953
5c. The location of sovereignty in despotic and constitutional government: the sovereign person, the sovereign office, the sovereign people	
5d. The analogues of despotic and constitutional rule in the relation of the powers of the soul: the tyranny of the passions	
6. Imperial rule as despotic, and as tyrannical or benevolent: the government of conquered peoples or colonies	954
7. The ways of tyrants or despots to attain and maintain power	
8. The fate of tyrants: revolutions for liberty and justice against tyranny and despotism; tyrannicide	955

REFERENCES

To find the passages cited, use the numbers in heavy type, which are the volume and page numbers of the passages referred to. For example, in **4** HOMER: *Iliad*, BK II [265-283] 12d, the number 4 is the number of the volume in the set; the number 12d indicates that the passage is in section d of page 12.

PAGE SECTIONS: When the text is printed in one column, the letters a and b refer to the upper and lower halves of the page. For example, in **53** JAMES: *Psychology*, 116a-119b, the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns, the letters a and b refer to the upper and lower halves of the left hand side of the page, the letters c and d to the upper and lower halves of the right-hand side of the page. For example, in **7** PLATO: *Symposium*, 163b-164c, the passage begins in the lower half of the left-hand side of page 163 and ends in the upper half of the right-hand side of page 164.

AUTHOR'S DIVISIONS: One or more of the main divisions of a work (such as PART, BK, CH, SECT) are sometimes included in the reference; line numbers, in brackets, are given in certain cases; e.g., *Iliad*, BK II [265-283] 12d.

BIBLE REFERENCES: The references are to book, chapter, and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses, the King James version is cited first and the Douay, indicated by a (D), follows; e.g., OLD TESTAMENT: *Nehemiah*, 7:45—(D) *II Esdras*, 7:46.

SYMBOLS: The abbreviation "esp" calls the reader's attention to one or more especially relevant parts of a whole reference; "passim" signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references, see the Explanation of Reference Style; for general guidance in the use of *The Great Ideas*, consult the Preface.

Chapter 96: UNIVERSAL AND PARTICULAR

INTRODUCTION

ON such speculative problems as the existence of God, the immortality of the soul, the infinity of time and space, or the limits of human knowledge, the conversation of philosophers seems to make contact with the discourse of scientists, the language of poets, and the speech of ordinary men. The philosophers usually begin at least by propounding questions which correspond to those asked by men who do not profess to be philosophers. But throughout the tradition of western thought, the problem of the universal, unlike these others, seems to have the character of a professional secret.

The various solutions of the problem of the universal are so many esoteric doctrines, each with its own sectarian name. The initiated can distinguish themselves from the novices by their proficiency in this area; and the outsider who overhears the discussion of professionals may be completely left behind, wondering as much about how the question arose as about the meaning of the conflicting answers.

No genuine philosophical problem, it seems reasonable to suppose, can be so remote from questions intelligible to common sense. If it is not just a specious riddle to amuse the experts, the problem of the universal, despite its technical appearance, should raise issues from which, in some form or other, no one can escape. Whether or not this is so can be tested by considering the various ways in which the problem occurs in other chapters under different guises and in different contexts.

In the chapter on *SAME AND OTHER*, we find the question how two individuals can be the same in some particular respect--how in spite of their separate existence they can share in the possession of a common nature or attribute. Anyone who classifies things or tries to make definitions may be led to wonder whether clas-

sifications are entirely verbal and definitions fictions of the mind, or whether things themselves belong together in some real community based upon an inherent sameness or similarity.

In the chapter on *ONE AND MANY*, the question takes the form of asking how two or more things can be one in any way. Again, both science and common sense seem able to deal with an infinite number of individuals by applying a single name to them or apprehending them all under a single concept or notion. But it may be asked what justifies the denomination of many things by one name. What unity in the things verifies the tendency of thought to unify them conceptually? Does a real unity exist in things, by virtue of their being somehow one as well as many, or as a result of the many somehow participating in a one which exists separately from them?

In the chapters on *DEFINITION* and *SIGN AND SYMBOL* the same questions are at least implicit. In connection with the object of definition, one issue is whether what Aristotle calls "the formulable essence" exists as the common nature of many individuals, or whether, as Locke suggests, definitions formulate only the nominal, not the real, essences of things. As that and related issues are faced, anyone who acknowledges the familiar distinction between proper and common names may become involved in questioning what common or general names signify and how they get the meanings with which they are used in everyday discourse.

The problem of the sameness of things distinct from one another, the problem of the one *in* the many or the one *and* the many, the problem of essences and common names, are other statements of the problem of the universal and the particular. Attention to the words themselves confirms this. The word "*universal*" connotes a unity--the one as opposed to the many,

the common as opposed to the unique or special. The word "*particular*" connotes participation—the part as opposed to the whole, the member as opposed to the class. As the reference already made to essence and individual indicates, these are not the only pairs of terms which somehow correspond in significance to universal and particular, but others, like model and imitation, form and matter, abstract and concrete, are more obscure in meaning. The discussion of universal and particular throws light on them rather than gains clarity from them.

THE READER OF THE great books can witness the origin of the problem of the universal and particular as it occurs in a conversation, not between technical philosophers, but between Socrates and his friends. In the *Meno*, Socrates and Meno get into a discussion of how virtue is acquired. Socrates thinks it is necessary to inquire first what virtue is. Meno responds by enumerating different virtues, but Socrates is not satisfied. He wants a definition which will cover all the virtues. Even if Meno could say what justice or temperance is, that would not do, for each of these is, as Socrates says, a virtue, not *virtue*—a particular virtue or a part of virtue, not the whole of it.

"In searching after one virtue," Socrates tells Meno, "we have found many . . . but we have been unable to find the common virtue which runs through them all." To help Meno, who claims he is not able to follow Socrates in his "attempt to get at one common notion of virtue," Socrates shifts the discussion to colors and figures. He warns Meno that color cannot be defined by naming colors, and that, even if he could define a square, a circle, and all other figures, he would not be saying what *figure* is. To proceed in this way is to be "landed in particulars."

"Tell me then," Socrates says, "since you call them by a common name, and say that they are all figures, even when opposed to one another, what is that common nature which you designate as figure?"

If Meno were to reply, "I do not know what you want," not much further explanation could be given. To someone who remained perplexed at this point, we could only say, Socrates sug-

gests, "Do you not understand that we are looking for the same in the many?" Or, put in another form, we might ask, he says, "What is that [one in many] which you call figure, and which includes not only the round and straight figures, but all?"

Thus stated, the problem of the universal seems inescapable—a problem for everyone, not just for philosophers. But the philosophers complicate the problem almost as soon as it is stated. Giving his version of the history of philosophy, Aristotle offers an explanation of how the problem shifted to another level. Socrates, he writes, "was busying himself about ethical matters" and, "seeking the universal in these ethical matters, [he] fixed thought for the first time on definitions. Plato accepted his teaching, but held that the problem applied not to sensible things, but to entities of another kind—for this reason, that the common definition could not be a definition of any sensible thing, as they were always changing. Things of this other sort he called Ideas, and sensible things, he said, were all named after these, and in virtue of a relation to these; for the many existed by participation in the Ideas that have the same name as they."

It is at this point, according to Aristotle, that the great philosophical controversy begins. Whereas "the thinkers of old ranked particular things as substances, e.g., fire and earth, not what is common to both, body," the Platonists or idealists—"the thinkers of the present day"—"tend to rank universal as substances, for genera are universal." Aristotle repeatedly tries to distinguish between the Socratic inquiry and what he regards as the Platonic doctrine—the theory of Ideas. "The first to raise the problem of universal definition . . . Socrates," he writes, "did not make the universals or the definitions exist apart; they, however,"—the Platonists—"gave them separate existence, and this was the kind of thing they called Ideas."

As between Socrates and his disciple, Aristotle does not hesitate to take sides. "Socrates gave the impulse to this theory of ideas . . . but he did not *separate* universals from individuals; and in not separating them," Aristotle adds, "he thought rightly." The issue between Aristotle and his own teacher, Plato, cannot, how-

ever, be stated by so simple an affirmation and denial.

On Aristotle's side, it involves the fundamental principles of his metaphysics, especially his doctrine of substance, as well as his theory of what and how the intellect knows, as contrasted with the perceptions of the senses. On Plato's side, it involves many questions concerning the intelligible and the sensible, being and becoming, the one and the many—questions the Aristotelian answers to which would not satisfy Plato.

Wherever the truth lies, Aristotle recognizes that on this issue, perhaps more than on any other, he is most sharply opposed to Plato. It is the one matter wherein he feels a conflict between devotion to his teacher and to the truth as he sees it. The consideration of the universal good, he declares in the *Ethics*, is made difficult "by the fact that the Forms have been introduced by friends of our own," but "while both are dear, piety requires us to honor truth above our friends."

THE HISTORIANS OF PHILOSOPHY, beginning with Aristotle, attribute one solution of the problem of universals to Plato. That solution comes to be called "realism" because it affirms the independent reality of universals as separately existing Ideas or Forms. But all the commentators do not, like Aristotle, dissent from Plato's solution. In our own time, for example, Bertrand Russell, treating of "the world of universals" in the *Problems of Philosophy*, says, "the problem with which we are now concerned is a very old one, since it was brought into philosophy by Plato. Plato's 'theory of ideas' is an attempt to solve this very problem, and in my opinion it is one of the most successful attempts hitherto made. The theory to be advocated in what follows is largely Plato's, with merely such modifications as time has shown to be necessary."

For one thing, Russell thinks "the word 'idea' has acquired in the course of time many associations which are quite misleading when applied to Plato's 'ideas.' We shall, therefore," he writes, "use the word 'universal' instead of the word 'idea' to describe what Plato meant. . . . We speak of whatever is given in sensation . . . as a *particular*; by opposition to this, a

universal will be anything which may be shared by many particulars. . . . Broadly speaking, proper names stand for particulars, while other substantives, adjectives, prepositions, and verbs stand for universals."

Russell here calls attention to another point which he thinks has too seldom been observed, namely, that universals are not exclusively signified by common nouns and adjectives, but that, in addition, there are relational universals signified by prepositions and verbs. This sort of universal, according to him, most readily shows that universals have being apart from particulars. It can also be shown, he argues, "that their being is not merely mental . . . that whatever being belongs to them is independent of their being thought of or in any way apprehended by minds."

If the word "existence" implies definite location in time and space, then, Russell concludes, in the sense in which "thoughts and feelings, minds and physical objects *exist*. . . universals do not exist." We must say instead that "they *subsist* or *have being*, where 'being' is opposed to 'existence' as being timeless. The world of universals, therefore, may also be described as the world of being. The world of being is unchangeable. . . . The world of existence is fleeting. . . . According to our temperaments, we shall prefer the contemplation of the one or the other. The one we do not prefer will probably seem to us a pale shadow of the one we prefer, and hardly worthy to be regarded as in any sense real. But the truth is that both have the same claim on our impartial attention, both are real, and both are important to the metaphysician. Indeed no sooner have we distinguished the two worlds than it becomes necessary to consider their relations."

IT IS THIS CONSIDERATION which seems to be for Plato *the* problem of the universal—the central difficulty in the theory of Ideas or separate Forms. As indicated in the chapters on FORM and IDEA, the separation of the two worlds—the sensible world of becoming and the intelligible world of being—always calls for some explanation of their resemblance.

Socrates sometimes refers to the doctrine of Ideas as if its truth could be assumed, and sometimes argues the necessity of a realm of immu-

table and intelligible being as the object of thought, comparable to sensible, changing things as the object of perception. In the *Phaedo*, for example, he gets Cebes to admit that the ideas, "which in the dialectical process we define as essences or true existences," are not subject to change, but that they are "always what they are, having the same simple self-existent and unchanging forms." In contrast to absolute beauty or goodness, the many beautiful or good things "are always in a state of change." These, Socrates says, "you can touch and see and perceive with the senses, but the unchanging things you can only perceive with the mind. Let us suppose then," he adds, "that there are two sorts of existences—one seen, the other unseen."

Later in the same dialogue, Socrates repeats the assumption that "there is an absolute beauty and goodness and greatness and the like." No other assumption seems to him to provide as satisfactory an explanation of how particular things can be beautiful or good or have any other characteristics. "Nothing makes a thing beautiful," he declares, "but the presence and participation of beauty in whatever way or manner obtained; for as to the manner I am uncertain, but I stoutly contend that by beauty all beautiful things become beautiful."

In later Platonic dialogues, the question of the manner comes to the fore. Though the Eleatic Stranger in the *Sophist* refers to the "endless conflict raging" between the materialists and the idealists concerning the existence of the unseen world of ideas, he himself seems to be doubtful only on the point of how the changing things of sense participate in the immutable forms. One answer is suggested in the *Timaeus*. According to the story of creation which Timaeus tells, the artificer of the world made its sensible particulars copy an eternal pattern. When many things seem to be of one nature or to share the same quality, they are so by virtue of imitating the eternal forms, which are not only absolute essences in themselves, but are also the models for created or generated things.

But in the *Parmenides* Socrates seems unable to defend the view that "the ideas are, as it were, patterns fixed in nature, and other things are like them, and resemblances of them—for what is meant by the participation of other

things in the ideas, is really assimilation to them." Nor can he meet other objections which Parmenides raises, such as the difficulty of two or more individuals participating in one idea; for if the idea is wholly in one individual, it cannot be in another, and if each of the many partake of the idea only in part, then the idea cannot be one and indivisible. "In what way, Socrates," Parmenides asks, "will all things participate in ideas, if they are unable to participate in them as parts or wholes?"

In the course of the discussion Parmenides rebukes Socrates for being squeamish about positing absolute essences for "such things as hair, mud, dirt, or anything else which is vile and paltry," as well as for things which are beautiful and good. But his main intention seems to be to leave Socrates with an unresolved dilemma. On the one hand, the difficulties with the theory of Ideas make the denial of their separate existence reasonable; on the other, the denial of their existence seems to make thought and reasoning impossible, because it deprives the mind of its proper objects.

SOME OF ARISTOTLE'S arguments against the separate existence of universals repeat the objections raised by Parmenides, to which no answer is given in the dialogues of Plato. If it were not for the fact that Aristotle attributes to Plato himself the theory he criticizes, the dialogues would leave us in some doubt as to whether it is Plato or his followers, the Platonists, who hold that theory. But whether or not Aristotle's criticisms apply to Plato—and even if they involve some misunderstanding of his doctrine—the objections Aristotle raises help define his own position.

To say that the Forms "are patterns and that other things share in them," Aristotle writes, "is to use empty words and poetical metaphors." In his view, "the most paradoxical thing of all is the statement that there are certain things besides those in the material universe, and that these are the same as sensible things except that they are eternal while the latter are perishable." To posit the separate being of the forms of things seems to him a useless multiplication of existences. To say that "there must be Ideas of all things that are spoken of universally" is to make substances of ideas.

Those who say the Forms exist would be right, Aristotle concedes, "if they are substances." He does not think it is impossible to establish the existence of imperishable and insensible substances, but such substances, if they exist, would not stand in relation to sensible substances as universal to particular, or as one to many. His objection to the theory of Ideas is that, in speaking of absolute beauty or beauty-itself, of the idea Man or man-itself, the Platonists do no more than add words like "absolute" or "itself" to the names of sensible things, and posit the existence of these absolutes or universals over and above the existence of the sensible particulars having the same name.

Aristotle's own position seems to be that only individual substances exist, whether they are sensible or intelligible, perishable or eternal, and that "no universal can be a substance" or exist separately in and of itself. He does not thereby deny the reality of the universal. On the contrary, he holds that "without the universal it is not possible to get knowledge," *i.e.*, scientific knowledge in distinction from mere sense-perception. "All knowledge is of the universal and of the 'such,'" he writes; yet in adding that "substance is not a universal, but is rather a 'this,'" Aristotle indicates what is for him the central problem of the universal.

Aristotle's theory that the mind abstracts universal concepts from the particulars of sense-experience, and that such concepts are the terms of the universal propositions constituting scientific knowledge, leaves a question concerning the object of science. If science is knowledge of real existence, not of our own concepts, and if only individual things really exist, then how can the object of science be the universal, not the individual? What is the object apprehended by the universal concept 'man' or 'horse'?

Aristotle's answer seems to be that if the universal term 'man' can be truly predicated of an indefinite number of individuals, it must signify something common to them all. The common nature or properties shared by a number of individuals cannot be actually universal, however, since, in Aristotle's opinion, whatever exists in the individual—the form as well as the matter of the concrete substance—is itself individual. He finds it necessary to say, therefore, that the universal exists potentially, not actual-

ly, whenever a number of individuals have something in common.

The form which constitutes human nature, for example, is an individual form in Socrates and Callias; but it has the potentiality of being universal insofar as it is capable of being separated from the individual matter of these two men by the abstractive power of the mind. When the abstraction takes place and results in the universal concept 'man,' the form thus received in the mind becomes actually universal and enables the mind to apprehend the nature common to all individual men.

ARISTOTLE'S DOCTRINE THAT the universal exists potentially in individual things and actually in the abstract concepts of the mind, later comes to be called "moderate realism," in contrast to the extreme realism of the position which asserts the actual subsistence of universals, outside of minds as well as apart from individual things. It affirms that the universal has what Russell calls "extra-mental reality," even though it severely qualifies the real being of the universal by saying it is neither actual nor subsistent.

As Aristotle denies unqualified reality to universals, later philosophers deny that they have any reality at all. Those who are sometimes called "conceptualists" admit the existence of universals only as abstract ideas in the mind. The "nominalist" position, taken by Hobbes and Berkeley, goes further and even denies abstract ideas or universal notions in the mind. It holds that universality is a property of words alone, which manifests itself in the meaning of general or common names.

In the progressive complication of the controversy, each of the theories which has acquired a traditional title undergoes modification as it is reformulated in different contexts. This is especially true of the two middle positions which tend to lean toward one or the other of the extremes.

Locke, for example, may be called a conceptualist because he thinks that general names derive their universal significance from the abstract ideas they signify. But though he denies that by means of our universal notions or abstract ideas we can know the real essences of things, he does not deny real essences. To this

extent, he may lean toward moderate realism more than a philosopher like William of Ockham, or a psychologist like William James who says, "*We must decide in favor of the conceptualists, and affirm that the power to think things, qualities, relations . . . isolated and abstracted from the total experience in which they appear, is the most indisputable function of our thought.*" Similarly, the development which Aquinas gives to Aristotle's views, especially in the point he adds concerning ideas in the mind of God—the "eternal exemplars"—may be a form of moderate realism which, more than Aristotle's, has some affinity with the theory of self-subsistent ideas as the eternal archetypes for sensible particulars.

Aquinas presents his own theory in the context of stating his understanding of the issue between Plato and Aristotle. "Plato supposed," he declares, "that the forms of natural things subsisted apart from matter, and consequently that they are intelligible, for a thing is actually intelligible from the very fact that it is immaterial. And he called such forms *species* or *ideas*. From a participation in these, he said that even corporeal matter was formed, in order that individuals might be naturally established in their proper genera and species. . . . But since Aristotle did not allow that the forms of natural things exist apart from matter, and since forms existing in matter are not actually intelligible, it follows that the natures or forms of the sensible things which we understand are not actually intelligible."

Aquinas speaks of the forms (which exist only in union with matter in individual things) as "universal forms," even though they are not actually intelligible. "We abstract universal forms from their particular conditions," he says, and by doing so we "make them actually intelligible." The Platonic error, in his opinion, consists in thinking that "the form of the thing known must be in the knower in the same manner as in the thing known." From the fact that "the form of the thing understood is in the intellect under conditions of universality, immateriality, and immobility," Plato concluded, erroneously, according to Aquinas, "that the things which we understand must subsist in themselves under the same conditions of immateriality and immobility."

As Aquinas states what he takes to be Aristotle's correction of this error, it consists in distinguishing two ways in which the universal can be considered. "First, the universal nature may be considered together with the intention of universality. And since the intention of universality—*viz.*, the relation of one and the same to many—is due to intellectual abstraction, the universal thus considered is subsequent, in our knowledge. . . . Secondly, the universal can be considered according to the nature itself (for instance, *animality* or *humanity*) as existing in the individual." In the order of generation and time, the potential universal precedes the actual universal; that is, the universal form or common nature exists in individual things under conditions of particularity before it exists in the human mind under conditions of abstraction.

Even as forms exist in things (though they are not actually universal prior to their existence as universal concepts of the mind), so they have a mode of being prior to their existence in things. Here Aquinas attributes to Augustine the correction of a pagan error and the substitution for it of a Christian truth. "Whenever Augustine, who was imbued with the doctrines of the Platonists," he writes, "found in their teaching anything consistent with the faith, he adopted it; and those things which he found contrary to faith, he amended."

Plato, positing "the forms of things subsisting of themselves apart from matter," had supposed that, "just as corporeal matter, by participating in the Idea of stone, becomes a stone, so our intellect, by participating in the same Idea, has knowledge of the stone." But, according to Aquinas, "it seems contrary to faith that the forms of things should subsist of themselves without matter outside the things themselves. . . . Therefore, in place of the Ideas defended by Plato, Augustine said that the exemplars of all creatures existed in the divine mind. It is according to these that all things are formed, as well as that the human soul knows all things."

THE SOLUTION TO THE problem of universals which Aquinas proposes seems to involve a threefold distinction with respect to the being of forms: they are (1) in the human mind by

abstraction from our experience of sensible particulars; (2) in individual things; and (3), prior to their existence in things, in the divine mind.

But Aquinas himself says that in God there is no distinction between universal and particular; nor does knowledge "exist in God after the mode of created knowledge, so as to be universal or particular." The divine ideas, whether considered as the exemplars by which God creates things or as the types and likeness by which God knows them, are not abstractions and so do not have the universality characteristic of human concepts. Whereas our abstract universals do not give us knowledge of individual things in their singularity, the divine ideas, according to Aquinas, are the principles whereby God at once knows the singular and the universal.

If the universal *as such* is not in the divine mind, neither, in Ockham's opinion, is it really in things—not even potentially. Everything that exists in an individual—its form and matter, all its parts and properties—is the unique and singular possession of that individual. If there were something common to two things, it would have to be one and two at the same time. As common to both, it would have to be somehow one and the same in both, yet as existing in each, it would have to be distinct in each; it would have to be as singular in each as each individual thing in which it existed. But since Ockham regards this as impossible, he concludes that "no universal really exists outside the soul in an individual substance; nor is it of the substance or the being of things, but is only in the soul."

The old riddle thus returns in another form. If abstract concepts are in the mind—or if, as Ockham suggests, the logical "terms 'animal' and 'man' are universals because predicable of many, not through themselves, but for the things they signify"—then what in reality is the object signified by the universal term or concept? It cannot be the many unless the numerically distinct individuals are also alike as men or animals; and how can they be really alike, as opposed to being merely conceived as such, unless they have a common nature or attribute and to that extent are one and the same?

Locke puts the question another way. "Since

all things are only particulars," he asks, "how come we by general terms, or where find we those general natures they are supposed to stand for?" He answers that "words become general, by being made the signs of general ideas; and ideas become general by separating from them the circumstances of time and place, and other ideas that may determine them to this or that particular existence. By this way of abstraction, they are made capable of representing more individuals than one; each of which having in it a conformity to that abstract idea is (as we call it) of that sort."

But if, as Locke goes on to say, general natures (or genera and species) are "nothing else but abstract ideas, more or less comprehensive, with names annexed to them," then in what way do the many individuals represented by one abstract idea have in them "a conformity to that abstract idea"? Locke's position seems to avoid this problem. "Abstract ideas," he writes, give us "no knowledge of existence at all." Only particular propositions are about real existences. "Universal propositions, of whose truth or falsehood we can have certain knowledge, concern not existence." Such propositions express nothing but "the agreement or disagreement of our abstract ideas."

In addition to denying their reference to reality, Locke regards abstract ideas as "fictions or contrivances of the mind," which are imperfect precisely to the extent that they succeed in being universal. The general idea of triangle, he observes, must be neither equilateral, isosceles, nor scalene, "but all and none of these at once. In effect, it is something imperfect, that cannot exist." Where Locke seems to mean only that there can be no counterpart in reality to our general ideas, Berkeley, observing the same "imperfection" in what are supposed to be abstract ideas, denies that they can exist even in the mind. "I deny," he writes, "that I can abstract from one another, or conceive separately, those qualities which it is impossible should exist so separated, or that I can frame a general notion by abstracting from particulars."

Berkeley admits that "a man may consider a figure merely as triangular, without attending to the particular qualities of the angles or relations of the sides. So far he may abstract; but

this will never prove that he can frame an abstract, general, inconsistent idea of a triangle." He recognizes also that all our common names have general significance, but he rejects Locke's explanation of their general meaning. "A word becomes general," he says, "by being made the sign, not of an abstract general idea, but of several particular ideas, any one of which it indifferently suggests to the mind."

Does a nominalist like Berkeley escape the persistent riddle? Does it not reappear in the question which must be asked: what is there in this set of particular ideas, as opposed to some other set, which makes it possible for a general name to signify any one of them indifferently? If each particular idea were absolutely unique and had nothing in common with any other, would the universal have any truth even on the level of names?

James thinks the nominalists are somehow forced to "admit a *quasi*-universal, something which we think *as if it were* universal, though it is not; and in all that they say about this something which they explain to be 'an indefinite number of particular ideas,' the same vacillation between the subjective and objective points of view appears. The reader never can tell," James continues, "whether an 'idea' spoken of is supposed to be a knower or a known. The authors themselves do not distinguish. They want to get something in the mind which shall *resemble* what is out of the mind, however vaguely, and they think that when that fact is accomplished, no farther questions will be asked."

SOME PHILOSOPHERS DEAL with the universal and particular in a manner which leads away from rather than into the traditional problem.

To Spinoza, for example, universal terms, such as *man*, *horse*, *dog*, represent confused images drawn from sense-experience. They provide us with an inadequate knowledge of things. To know things adequately we must proceed "from an adequate idea of the formal essence of certain attributes of God to the adequate knowledge of the essence of things." Quite opposite to the abstract universal (or indeterminate image from experience), the adequate idea is universal in the totally different sense of comprehending an infinite whole.

Hegel also distinguishes between abstract universality and "true infinity or concrete universality." The former is "something determinate; *i.e.*, being abstraction from all determinacy, it is itself not without determinacy; to be something abstract and one-sided constitutes its determinacy, its defectiveness, its finitude." The antithesis of the abstract universal is the particular, the determinate content implicitly contained in an abstract universal. The synthesis is the individual; not the particular individual, but the infinite individual which is the concrete universal.

The concrete universal is neither "the universal as a common characteristic, nor the abstract universality which stands outside and over against the individual, the abstract identity of the Understanding." It is "the universality which has the particular as its opposite, but the particular which by its reflection into itself has been equalized with the universal. This unity is individuality, not individuality in its immediacy as a unit . . . but individuality in accordance with its concept." For Hegel, the concrete universal is the immanent Idea itself. It is the manifestation of the Absolute Spirit or God.

HOWEVER IT IS formulated and whether or not it is or can be solved, the problem of the universal seems to have a critical bearing on the discussion of many other great ideas. In addition to the chapters enumerated at the beginning, we can now see that the universal, the particular, and the individual are implicated in the consideration of BEING and INFINITY, FORM and IDEA, MATTER and MIND, EXPERIENCE, INDUCTION, JUDGMENT, and SCIENCE. These chapters, in turn, do more than throw light on the various solutions proposed to the problem of the universal. They help us understand the importance of the problem—certainly to the philosophers of the western tradition. If in the broader context of connected issues, it is discovered that the proof of man's distinctive rationality, or even the possibility of an immortal soul, may depend on the affirmation or denial of universals, at least as concepts in the mind, then, perhaps, some tolerance and patience may be won for the burdensome technicalities of the problem.

OUTLINE OF TOPICS

	PAGE
1. The distinction and relation between universal and particular: essence and individual, whole and part, class and member, one and many, same and other, the common and the unique	966
2. The problem of the universal	967
2a. The reality of universals: their actual existence as separate forms, or their potential existence in the forms of things	
2b. Universals as abstractions or concepts in the human mind	
2c. The reduction of universals or abstractions to the meaning of general or common names	968
3. The problem of the individual: the principle of individuality; the concrete universal	
4. Universals and particulars in the order of knowledge	
4a. Universals as objects of knowledge: the intuitive or reflexive apprehension of universals	
4b. Universals in relation to the angelic intellect and the divine mind	
4c. The abstraction of universal concepts from the particulars of sense	969
4d. The distinction between particular and universal in relation to the distinction between percept and concept, or between image and idea	
4e. The inadequacy of our knowledge of individuals: their indefinability	
4f. The generality of science: the universality of its principles	
5. Universal and particular in relation to grammar and logic	970
5a. The distinction between proper and common names	
5b. The classification of universals: their intension and extension; their degrees of generality	
5c. Particulars and universals in predications or judgments: the quantity of propositions; the universal, the particular, and the singular judgment	
5d. Rules concerning the universality and particularity of premises in reasoning; the quantity of the conclusion in relation to the quantity of the premises	971
6. Applications of the distinction between universal and particular	
6a. Particular and universal in the analysis of matter and form	
6b. Universal and particular causes	
6c. The universality of law and particular dispensations of equity	
7. Universality and particularity in relation to the distinction between the objective and the subjective, the absolute and the relative	
7a. The issue concerning the universality of truth	
7b. The issue concerning the universality of moral principles	972
7c. The issue concerning the universality of aesthetic standards: the subjective universal	

REFERENCES

To find the passages cited, use the numbers in heavy type, which are the volume and page numbers of the passages referred to. For example, in 4 HOMER *Iliad*, BK II [265-283] 12d, the number 4 is the number of the volume in the set; the number 12d indicates that the passage is in section d of page 12.

PAGE SECTIONS: When the text is printed in one column, the letters a and b refer to the upper and lower halves of the page. For example, in 53 JAMES *Psychology*, 116a 119b, the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns, the letters a and b refer to the upper and lower halves of the left-hand side of the page, the letters c and d to the upper and lower halves of the right-hand side of the page. For example, in 7 PLATO *Symposium*, 163b 164c, the passage begins in the lower half of the left-hand side of page 163 and ends in the upper half of the right-hand side of page 164.

AUTHOR'S DIVISIONS One or more of the main divisions of a work (such as PART, BK, CH, SECT) are sometimes included in the reference, line numbers, in brackets, are given in certain cases; e.g., *Iliad*, BK II [265-283] 12d.

BIBLE REFERENCES The references are to book, chapter, and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses, the King James version is cited first and the Douay, indicated by a (D), follows; e.g., OLD TESTAMENT *Nehemiah*, 7 45—(D) *II Esdras*, 7 46.

SYMBOLS The abbreviation "esp" calls the reader's attention to one or more especially relevant parts of a whole reference, "passim" signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references, see the Explanation of Reference Style; for general guidance in the use of *The Great Ideas*, consult the Preface.

Chapter 97: VIRTUE AND VICE

INTRODUCTION

IN their currently popular connotations, the words "virtue" and "vice" have extremely limited significance. Virtue tends to be identified with chastity or at least with conformity to the prevailing standards of sexual behavior. The popular notion of vice retains a little more of the traditional meaning, insofar as it implies injury to a person's character or health as the result of strong *habitual* addictions. But, as in the case of virtue, the things which are popularly called "vices" are largely concerned with pleasures or sensual indulgences.

In the tradition of the great books, however, the scope of these terms and the range of the problems in which they are involved seem to be co-extensive with morality; or, in other words, with the broadest consideration of good and evil in human life, with what is right and wrong for man not only to do, but also to wish or desire, and even to think. For some of the great moral philosophers, other terms—such as duty for Marcus Aurelius and Kant, or pleasure and utility for Mill—seem to be more central. But for Plato, Aristotle, and Aquinas virtue is a basic moral principle. By reference to it they define the good man, the good life, and the good society. Yet even for them it is not the first principle of ethics. They define virtue itself by reference to a more ultimate good—happiness. For them the virtues are ordered to happiness as means to an end.

THE ANCIENT ENUMERATION of particular virtues may show the range of things comprehended under the notion of virtue generally. It may also further sharpen the contrast with the contemporary tendency to use the words "virtue" and "vice" as if they applied only to matters which fall within the sphere of one of the virtues. That one is the virtue which both Plato and Aristotle call "temperance," and which they

conceive as concerned chiefly with the bodily appetites and pleasures. Plato and Aristotle give somewhat different enumerations, but courage and justice are as fundamental for them as temperance; and when certain virtues come later to be classified as the cardinal or principal virtues, these three are always named together. In that classification, there is a fourth—prudence or, as it is sometimes called, "practical wisdom."

Plato's enumeration of the virtues in the *Republic* also adds wisdom to temperance, courage, and justice. This indicates at once that the ancient conception of virtue as the quality which makes a man good, extends to his mind as well as to his character—to the sphere of thinking and knowing as well as to desire, emotion, and action. Aristotle makes this explicit by dividing all the virtues into moral and intellectual, or excellences of character and of mind. He names five intellectual virtues: in addition to wisdom and prudence (which he distinguishes as speculative and practical wisdom), he lists art, science, and what he calls "intuitive reason," which Aquinas later calls "understanding."

The division of the virtues into moral and intellectual leads, in Aristotle's analysis, to the further distinction between those intellectual virtues—understanding, science, wisdom—which represent the possession of speculative insight or theoretic knowledge, and those—art and prudence—which represent skill in practical thinking or in the application of knowledge to production and action respectively. Because it is concerned with action, or moral conduct, the virtue of prudence is most closely associated with the moral virtues of justice, courage, and temperance. The grouping together by Aquinas of these four as the cardinal virtues carries the implication that the remaining four (*i.e.*, art and the three virtues of the speculative rea-

son) play a secondary role. The implication is simply that a man may be made good as a scientist or good as an artist by the acquisition of these virtues, but he is not made good as a man by these virtues, nor do they enable him to lead a good life and achieve happiness, as do the moral virtues accompanied by prudence.

In line with the principle by which he regards certain virtues as cardinal or indispensable for human rectitude and welfare, the Christian moralist goes further than the moral philosopher in developing the theory of virtue. Considering man's limitations and his fallen nature, he holds that more than all the natural virtues (*i.e.*, the virtues which men can attain by their own effort) is required for salvation—for the supernatural end of eternal happiness. Faith, hope, and charity, according to St. Paul, are indispensable to lift man's life to a plane, and direct it to a goal, which exceed his nature. These gifts of God's grace are subsequently treated by Augustine and Aquinas as virtues—supernatural, not natural virtues. Aquinas specifically calls them "theological virtues" to distinguish them from other supernatural endowments, such as the infused moral virtues and the gifts of the Holy Ghost.

THE READER MAY OBSERVE that of all the virtues so far named, only the three theological virtues are not the subject of separate chapters in this collection of great ideas. The chapters on COURAGE, JUSTICE, TEMPERANCE, PRUDENCE, WISDOM may include discussions of these qualities which do not specifically treat them as virtues. Certainly that is true of the chapters on ART and SCIENCE, and the chapter on PRINCIPLE, wherein the virtue of intuitive reason or the understanding of first principles is considered. Nevertheless, that all but one of these chapters bear the name of the traditionally recognized virtues indicates how widely and variously they make their appearance throughout the great books—by example and comment in poetry and history as well as by definition and analysis in the ethical and political treatises. In contrast, the theological virtues appear only in Christian, not pagan literature, and then mainly in religious rather than secular writing.

It is also of interest to note the relation which this chapter bears to those dealing with other

fundamental concepts of moral philosophy or theology. Some of the terms mentioned in the foregoing paragraphs—duty, pleasure, happiness, good—name chapters which are co-implicated with this one in the problem of how men should live and what they should seek. The Outline of Topics will reveal still others—knowledge, desire, emotion, reason, will, wealth, honor, friendship, teaching, family, state, citizen, law, sin, and grace—each of which is (or indicates) the title of a chapter that treats of matters related to virtue as cause or consequence, as psychological factor or external condition.

One chapter not yet mentioned has maximum relevance for most of the authors who offer some analysis of virtue. The chapter on HABIT treats an idea that is crucial to the definition of virtue. Aquinas, for example, allocates the discussion of virtue and vice to his Treatise on Habit in the *Summa Theologica*. He divides this treatise into questions concerning habits in general and questions concerning good and evil habits—or virtues and vices—in particular. But the notion that virtue combines the elements of habit and goodness is not peculiarly his. With varying degrees of emphasis and explicitness, it appears in Plato and Aristotle, in Augustine, Bacon, Hegel, and James. Kant alone expressly dissents, declaring that virtue "is not to be defined and esteemed merely as *habit*, and . . . as a long *custom* acquired by the practice of morally good actions."

THE DISCUSSION OF VIRTUE originates in the dialogues of Plato and the *Ethics* of Aristotle with a number of related questions. Meno's opening question—"Can you tell me, Socrates, whether virtue is acquired by teaching or by practice; or if by neither teaching nor practice, then whether it comes to man by nature, or in some other way?"—requires, in the opinion of Socrates, other questions to be faced: what virtue is, how virtue is related to knowledge, whether virtue is one or many, and if many, how the several particular virtues are related to one another.

In the course of the dialogue, each of the alternatives is considered. If virtue were identical with knowledge, it could be taught and learned just as geometry is. If virtue were simply a hab-

it, it could be acquired by practice, that is, by the repetition of similar acts. But neither practice nor teaching seems by itself to explain how men come by virtue, and even less why virtuous fathers should so often fail to produce virtue in their sons. Yet Socrates does not completely dismiss these possibilities or the possibility considered at the end, that "virtue comes to the virtuous by the gift of God." What truth there is in each of them, he concludes, cannot be determined until we know precisely what virtue is.

Another dialogue, the *Protagoras*, pursues a similar inquiry and seems to reach a similarly indeterminate conclusion. The relation of virtue to knowledge here leads to the question whether "wisdom and temperance and courage and justice and holiness" are "five names of the same thing." To the extent that each depends on knowledge of what is good and evil, they would seem to be, if not identical, at least inseparable aspects of the same thing. Protagoras objects on the score that a man may be courageous and at the same time "utterly unrighteous, unholy, intemperate, ignorant." But Socrates finally gets him to admit reluctantly that courage consists in knowledge, and cowardice in ignorance, of what is and is not dangerous.

It was Protagoras, however, who originally contended against Socrates that virtue can be taught. The reduction of all the virtues to some form of knowledge would therefore seem to confirm his opinion. Socrates, in winning the argument about virtue and knowledge, seems to overthrow his own view that virtue cannot be taught. "The result of our discussion," Socrates says at the end, "appears to me to be singular. For if the argument had a human voice, that voice would be heard laughing at us and saying: 'Protagoras and Socrates, you are strange beings; there are you, Socrates, who were saying that virtue cannot be taught, contradicting yourself now by your attempt to prove that all things are knowledge, including justice and temperance and courage—which tends to show that virtue can certainly be taught. . . . Protagoras, on the other hand, who started by saying that it might be taught, is now eager to prove it to be anything rather than knowledge.'"

The only way "this terrible confusion of our

ideas" might be cleared up, Socrates suggests, is for the conversation to go on "until we ascertain what virtue is." But that particular conversation does not go on; nor do the definitions of virtue which are proposed in other Platonic dialogues seem to be decisive on the point whether virtue is knowledge or whether it can be taught. In the *Laws*, for example, the Athenian Stranger, saying that "harmony of the soul, taken as a whole, is virtue," proposes that education should consist in training "the first instincts of virtue in children" by producing suitable habits in them. But his training does not seem to be, like ordinary teaching, the inculcation of knowledge. It is "training in respect of pleasure and pain," whereby we are led to hate what we ought to hate and love what we ought to love.

In the *Republic*, Socrates compares the harmony produced by virtue in the soul with the harmony of the parts in a healthy body. "Virtue is the health and beauty and well-being of the soul," he declares, "and vice the disease and weakness and deformity of the same." Though wisdom consists in the rule of the other parts of the soul by reason in the light of "knowledge of what is for the interest of each of the parts and of the whole," it does not seem to be the whole of virtue, nor does Socrates suggest that men become virtuous simply by becoming wise. On the contrary, he intimates that "good practices lead to virtue, and evil practices to vice," and that, like certain bodily qualities, the "virtues of the soul . . . can be implanted by habit and exercise."

IT IS SOMETIMES SUPPOSED that Aristotle differs from Plato on fundamental points in the theory of virtue. The fact that Aristotle criticizes Socrates for "thinking that all the virtues are forms of practical wisdom," seems to imply a basic disagreement on the relation of virtue to knowledge. But Aristotle also remarks that Socrates was right "in saying they implied practical wisdom." His own view that the moral virtues of courage, temperance, and justice are inseparable from the intellectual virtue of prudence does not seem to differ substantially from the statements of Socrates that "virtue must be a sort of wisdom or prudence" and that "virtue is either wholly or partly wisdom." Such differ-

ence as there is appears to be not so much in what is being affirmed or denied as in the manner of statement or analysis, and beyond that, perhaps, in a method of exposition which permits Aristotle to give definite answers to questions Plato's dialogues often leave unanswered.

Aristotle's analysis, of course, sometimes changes the questions themselves to make them answerable, but this is not always so. His summary of existing opinions concerning the acquisition of virtue—that "some think we are made good by nature, others by habituation, others by teaching"—is nearly equivalent, as an enumeration of the possibilities, to Meno's opening question. But where Socrates in answering Meno contents himself with suggesting that there may be some truth in each possibility as against the others, Aristotle definitely affirms that the whole truth about the matter combines all three factors. "There are three things," he writes, "which make men good and virtuous: these are nature, habit, rational principle." Even Socrates' final point, that virtue may be a gift of God, seems to be affirmed by Aristotle's comment that, in effecting virtue, "nature's part evidently does not depend on us, but as a result of some divine causes is present in those who are truly fortunate."

But in the case of two Platonic questions—the one about the relation of virtue to knowledge and the other about the unity of virtue—Aristotle's analysis transforms the problem. His basic distinction between moral and intellectual virtue turns the question about virtue and knowledge into one concerning the role which one very special kind of knowledge, represented by the virtue of prudence, plays in the formation and operation of good moral habits—habits in the sphere of action and passion, or of the will and the emotions. By substituting a number of distinct intellectual virtues for the single term 'knowledge,' Aristotle can definitely answer both Yes and No to the question. Not all the intellectual virtues, not art and science, or even speculative wisdom, are needed for courage, temperance, and justice; but if by "knowledge" is meant nothing more than prudence, then Aristotle affirms these moral virtues to involve knowledge of a sort.

The distinction between moral and intellectual virtue also enables Aristotle to reformulate

the problem of the unity of virtue. Instead of asking whether there is only one virtue, having many aspects, or many distinct virtues, he considers which virtues are interdependent and which can exist separately from one another. Virtue has unity in the inseparability of the moral virtues from one another and from prudence. The sailor who appears to be courageous without being temperate, or the thief who appears to be prudent without being just, has only the appearance of these virtues. But though Aristotle uses the phrase "perfect virtue" to signify both the integration of these virtues and the perfection of each when it is integrated with the others, he does not include all the particular virtues in the unity of virtue. Some, like art and science, can exist apart from prudence or the moral virtues, and they from it.

By showing how all of the moral virtues depend upon prudence or practical wisdom, Aristotle thinks he is able to "refute the argument . . . that the virtues exist in separation from each other." But he does not find any greater unity of the virtues than is involved in their inseparability as a result of their common dependence on prudence. Following Aristotle, Aquinas criticizes those who assert a more profound unity by claiming that prudence, temperance, fortitude, and justice signify "only certain general conditions . . . to be found in all the virtues." This, according to Aquinas, is tantamount to denying that they are distinct habits.

Insisting that they are really distinct as habits, Aquinas nevertheless suggests that "these four virtues qualify one another by a kind of overflow. For," he explains, "the qualities of prudence overflow into the other virtues in so far as they are directed by prudence. And each of the others overflows into the rest, for the reason that whoever can do what is more difficult, can do what is less difficult." The man who "can curb his desires for the pleasures of touch, which is a very hard thing to do . . . is more able to check his daring in dangers of death . . . which is much easier"; the man who can withstand the "dangers of death, which is a matter of great difficulty, is more able to remain firm against the onslaught of pleasures."

As for justice, Aquinas holds that legal justice, "by commanding the other virtues . . . draws

them all into the service of the commonweal." Aristotle also sees a certain unification of the virtues, at least all the moral virtues, in terms of justice—the kind of justice he calls "general" to distinguish it from the special virtue of justice. He conceives general justice as comprising all the moral virtues, including special justice, insofar as all these virtues are directed toward the welfare of society and the good of other men. "Justice in this sense," he writes, "is not a part of virtue, but virtue entire." Holding that it "is complete virtue, not absolutely, but in relation to our neighbor," he also adds that "it is complete because he who possesses it can exercise his virtue not only in himself, but towards his neighbor as well."

Some writers tend in the opposite direction toward a greater separation of the virtues. Justice, according to Marcus Aurelius, is prior to the other virtues, for "in justice the other virtues have their foundation." In suggesting that a man can secure "a favorable and commodious interpretation of his vices" by coloring them in the light of his virtues, Bacon seems to accept the conjunction of virtue with vice which is expressed in the familiar phrase "the defects of one's virtues." That a gentleman may with honor be permitted certain failings is similarly implied by Dr. Johnson's reference to "the genteel vices."

This comfortable doctrine that a man can be truly virtuous in some aspects of character while vicious in others seems, however, to be rejected by Montaigne and Kant, as well as by Plato and Aristotle. The standard of Christian virtue is even more stringent. What may appear to be virtues are, according to Augustine, "rather vices than virtues so long as there is no reference to God in the matter. For although some suppose that virtues which have a reference only to themselves, and are desired only on their own account, are yet true and genuine virtues, the fact is that even they are inflated with pride, and are therefore to be reckoned vices."

The theological virtue of charity—the love of God—is held by the theologians to be indispensable to the perfection of all the other virtues in a Christian life. Not only, according to Aquinas, do faith and hope lack "the perfect character of virtue without charity," but all

the other virtues are imperfect in its absence.

"It is possible by means of human works," he writes, "to acquire the moral virtues in so far as they produce good works that are directed to an end not surpassing the natural ability of man. And when they are acquired thus, they can be without charity, even as they were in many of the pagans. But in so far as they produce good works in relation to a supernatural last end, thus they have the character of virtue truly and perfectly, and cannot be acquired by human acts, but are infused by God. Such moral virtues cannot be without charity. . . . Only the infused virtues are perfect, and deserve to be called virtues absolutely. . . . The other virtues, those, namely, that are acquired, are virtues in a restricted sense."

THAT VIRTUE IS GOOD and vice evil seems to go undisputed in the tradition of the great books, even by Machiavelli who bemoans the "necessity" of vice in a successful prince. But unanimity on this point does not preclude a variety of answers to the question, What is the good of virtue?

Is it an end in itself, or a means, and if a means, what end does it serve? Moreover, what is the principle of goodness in the virtues? Does it lie in the rule of reason, in conformity to nature, in obedience to the moral law and the imperative of duty, in submission to God's will? Or are the virtues good only to the extent that they are useful and profitable? To the individual alone or to society as well? As these questions are differently answered, different conceptions of virtue appear.

Marcus Aurelius gives the simplest and most familiar answer. Virtue is its own reward. "What more dost thou want," the Stoic asks, "when thou hast done a man a service? Art thou not content that thou hast done something conformable to thy nature, and dost thou seek to be paid for it?" The virtues are not only self-rewarding but they are the only things in which a good man can take delight. "When thou wishest to delight thyself," Aurelius says, "think of the virtues of those who live with thee . . . For nothing delights so much as the examples of the virtues."

Locke seems to make profit or utility the source of goodness in the virtues. "God, hav-

ing, by an inseparable connexion, joined virtue and public happiness together," Locke writes, "and made the practice thereof necessary to the preservation of society, and visibly beneficial to all with whom the virtuous man has to do, it is no wonder that everyone should not only allow, but recommend and magnify those rules to others, from whose observance of them he is sure to reap advantage to himself."

The virtues seem to become conventional in Locke's view. They are whatever the members of a particular society deem advantageous. "Virtue and vice are names pretended, and supposed, everywhere to stand for actions in their nature, right and wrong; and as far as they are really so applied, they are so far co-incidental with the divine law . . . But yet, whatever is pretended," Locke adds, "this is visible, that these names, virtue and vice, in the particular instances of their application, through the several nations and societies of men in the world, are constantly attributed only to such actions as, in each country and society, are in reputation or discredited. . . . Thus, the measure of what is everywhere called and esteemed virtue and vice, is the approbation or dislike, praise or blame," which establishes itself in a society "according to the judgment, maxims, or fashion of that place. . . . That this is the common measure of virtue and vice, will appear," Locke thinks, "to anyone who considers, that though that passes for vice in one country, which is counted a virtue, or at least not a vice, in another; yet everywhere, virtue and praise, vice and blame, go together."

Hobbes also regards the names of the virtues as "inconstant names" varying according to "the nature, disposition and interest of the speaker . . . for one man calleth *wisdom*, what another calleth *fear*; and one *cruelty*, what another *justice*; one *prodigality*, what another *magnanimity*." Yet this does not prevent Hobbes from proposing a list of virtues which derive their goodness from the natural law. "All men agree on this," he writes, "that peace is good; and therefore also the ways or means of peace, which . . . are *justice, gratitude, modesty, equity, mercy*, and the rest of the Laws of Nature, are good; that is to say, *Moral Virtues*; and their contrary *Vices*, evil."

Moral philosophy, according to Hobbes, is

"the science of Virtue and Vice" and "therefore the true doctrine of the Laws of Nature is the true moral philosophy." Though other writers of moral philosophy "acknowledge the same virtues and vices," Hobbes thinks they do not see "wherein consisted their goodness; nor that they come to be praised as the means of peaceable, sociable, and comfortable living."

Like Kant, he criticizes Aristotle's doctrine of the mean; or, as Hobbes refers to it, the notion that virtue consists in "a mediocrity of the passions; as if not the cause, but the degree of daring, made *fortitude*; or not the cause, but the quantity of a gift, made *liberality*." The cause of virtue, according to Hobbes, is the natural law, commanding men to do whatever is required for peace and self-preservation. In terms of a quite different conception of law and duty, Kant also says that "the difference between virtue and vice cannot be sought in the degree in which certain maxims are followed, but only in the specific *quality* of the maxims. In other words, the vaunted principle of Aristotle, that virtue is the *mean* between two vices, is false."

It is not Kant but Spinoza who seems to bear an affinity to Hobbes in the theory of virtue. Both make self-preservation the end which determines the direction of virtuous conduct. Both consider civil peace or the good of others in relation to self. Both draw up lists of moral virtues from their enumeration of the passions, Hobbes by reference to natural law, Spinoza in terms of adequate ideas of God's nature. Spinoza identifies virtue with power and holds that "the more each person strives and is able to seek his own profit, that is to say, to preserve his own being, the more virtue does he possess." But though he makes "the endeavor after self-preservation . . . the primary and only foundation of virtue," he conceives self-preservation itself to have its foundation in knowledge of God.

"To act in conformity with virtue," Spinoza maintains, "is to act according to the guidance of reason, and every effort which we make through reason is an effort to understand, and therefore the highest good of those who follow after virtue is to know God, that is to say, it is a good which is common to all men, and can be equally possessed by all in so far as they are of the same nature." In direct consequence, he

declares that "the good which everyone who follows after virtue seeks for himself, he will desire for other men; and his desire on their behalf will be greater in proportion as he has greater knowledge of God."

ALL THOSE WHO RELATE virtue to happiness do not do so in the same way. "The multiplication of happiness," writes Mill, "is, according to the utilitarian ethics, the object of virtue." He attributes to "a very imperfect state of the world's arrangements" the fact that "anyone can best serve the happiness of others by the absolute sacrifice of his own; yet so long as the world is in that imperfect state," he goes on to say, "the readiness to make such a sacrifice is the highest virtue which can be found in man."

But Mill repeatedly insists that only an increase of happiness justifies sacrifice, and only its contribution to happiness makes virtue good. He criticizes the Stoics for striving "to raise themselves above all concern about anything but virtue" and for supposing that "he who has that has everything. . . . No claim of this description is made for the virtuous man by the utilitarian doctrine."

While admitting that virtue may come to be desired disinterestedly, as an ingredient of happiness rather than as a means to it, Mill does not regard virtue as a natural and necessary condition of happiness. "Virtue, according to the utilitarian doctrine, is not naturally and originally part of the end, but it is capable of becoming so." If there are some who do not desire virtue, either because it gives them no pleasure or because the lack of it causes them no pain, they can be happy without it.

The view taken by Plato and Aristotle seems to be directly contrary. All things which have ends appointed by their nature, Socrates argues at the beginning of the *Republic*, must also be capable of virtues or excellences whereby to achieve their ends. If happiness is the end of the soul or of human life, then we must look to such excellences as the virtue of justice and temperance to provide the means. When Glaucon and Adeimantus ask Socrates to prove that only the virtuous man can be happy, he undertakes the long analysis of the parts of the soul and the parts of the state to discover the virtues appropriate to each and to the whole.

When the virtues are defined, Glaucon admits that the question he originally asked "has now become ridiculous."

The answer to the question is evident as soon as virtue and happiness are seen to be reciprocal notions, like cause and effect. Yet Aristotle's definition of moral virtue as a habit of choice, consisting in a mean—a mean relative to ourselves, determined by reason or as the prudent man would determine it—does not immediately explain why happiness is defined as "the realization and perfect exercise of virtue." The connection between virtue as means and happiness as end becomes apparent only in terms of the conception that happiness is the ultimate end *because* it includes all good things and leaves nothing to be desired.

As an object of desire, as something worth having in itself, virtue is only one type of good. It does not constitute happiness. Happiness, according to Aristotle, includes as well such bodily and external goods as health and pleasure, friendship and wealth. But unlike these other goods, the virtues alone are capable of producing happiness because, in Aristotle's view, they are the causes of our thinking and acting well with respect to all other goods.

"We do not acquire or preserve virtue by the help of external goods," Aristotle says, "but external goods by the help of virtue." This applies to health and pleasures, no less than to wealth and friends. Because the moral virtues, together with prudence, direct our desires, determine our choices, and govern our actions in accordance with reason's discrimination between real and apparent goods, the exercise of these habits results in happiness or living well. But since external goods are goods of fortune and not entirely within our control, Aristotle finds it necessary to qualify the definition of happiness. To the statement that the happy man is one "who is active in accordance with complete virtue," he adds that he is one "who is sufficiently equipped with external goods, not for some chance period, but throughout a complete life."

According to Kant, "the connexion of virtue and happiness may be understood in two ways: either the endeavor to be virtuous and the rational pursuit of happiness are not two distinct actions, but absolutely identical . . . or the con-

nexion consists in this, that virtue produces happiness as something distinct from the consciousness of virtue, as a cause produces an effect." Kant thinks that both the Stoic and Epicurean doctrines choose the first of these alternatives. They differ from each other, in his opinion, only in the way they conceive the identity of virtue and happiness. "The Epicurean notion of virtue," he writes, "was already involved in the maxim: to promote one's own happiness. According to the Stoics, on the other hand, the feeling of happiness was already contained in the consciousness of virtue."

Kant's own resolution of what he calls "the antinomy of practical reason" seems to depend on his conception of the *summum bonum*. For him it is not happiness; it consists rather in being worthy of happiness through doing one's duty. "Morality," he says, "is not properly the doctrine how we should *make* ourselves happy, but how we should become *worthy* of happiness." Under the moral law, to be happy is not a duty, but to be worthy of happiness is. In Kant's view, therefore, virtue is related to happiness through the medium of duty. Virtue, he declares, is "a coincidence of the rational will with every duty firmly settled in the character." It is "the moral strength of a man's will in his obedience to duty."

But in addition to being the will's strength in overcoming obstacles—"the natural inclinations which may come into conflict with the moral purpose"—virtue, or rather "the imperative, which commands the duty of virtue," includes "besides the notion of constraint, that of an end." Not an end that we have, Kant explains, but one that "we ought to have," an end "which, therefore, pure practical reason has in itself, whose highest, unconditional end (which, however, continues to be a duty) consists in this: that virtue is its own end, and by deserving well of men is also its own reward."

THE ISSUE BETWEEN KANT and Aristotle concerning the good of virtue, as a means or an end, involves the whole of their moral philosophy. It goes to the central conflict between their fundamental principles, which is discussed in the chapters on DUTY and HAPPINESS. Fundamental differences in political philosophy also arise from different views of virtue in relation to the

forms of government and the ends of the state.

The ancients, for example, define aristocracy in terms of virtue. The point is not only that aristocracy is a form of government in which the few who are most virtuous rule; it is also that form of government the principle of which is virtue, as liberty is the principle of democracy, and wealth of oligarchy. Montesquieu makes virtue the principle in republican government, in contrast to honor as the principle in monarchies and fear in despotism. "What I distinguish by the name of virtue, in a republic," he explains, "is the love of one's country—that is, the love of equality. It is not a moral, nor a Christian, but a political virtue; and it is the spring which sets republican government in motion, as honor is the spring which gives motion to monarchy." Since for Montesquieu both democracy and aristocracy are forms of republican government, the former rests on virtue as much as the latter.

Agreeing that the conditions Montesquieu sets for republican government "could not exist without virtue," Rousseau criticizes him for failing to see that, "the sovereign authority being everywhere the same, the same principle should be found in every well-constituted state, in a greater or less degree, it is true, according to the form of government." So for Mill, virtue defines the aim of good government itself, without respect to particular forms. "The most important point of excellence which any form of government can possess," he writes, "is to promote the virtue and intelligence of the people themselves."

The virtues which a government promotes, however, may be those of the good citizen rather than the good man. This distinction between civic and moral virtue occupies the ancients, related as it is to the problem of the virtuous man living in a bad society—a problem which Socrates actually faces, as well as discusses, in the *Apology* and the *Crito*.

"The virtue of the citizen," Aristotle writes, "must be relative to the constitution of the state of which he is a member. . . . Hence it is evident that the good citizen need not of necessity possess the virtue which makes a good man." Yet "in some states, the good man and the good citizen are the same."

In this vein Aquinas, considering whether the laws should try to make men good, says of a tyrannical or unjust law that "in so far as it has something of the nature of law, its aim is that the citizens be good." At least "it aims at being obeyed by them, and this," he adds, "is to make them good, not absolutely, but with respect to

that particular government." But Aquinas also contemplates the need for disobeying a civil ordinance if it demands too great a sacrifice of virtue by requiring the citizen to violate the natural or the divine law. As Rousseau later says, "a man's duty" takes precedence over "that of a citizen."

OUTLINE OF TOPICS

	PAGE
1. Diverse conceptions of virtue	985
1a. The relation between knowledge and virtue	986
1b. The unity of virtue and the plurality of virtues	
1c. The doctrine of virtue as a mean between the extremes of vice	987
1d. Virtue as an intrinsic good: its relation to happiness	
1e. The distinction between virtue and continence: the consequences of the theory of virtue as habit	988
2. The classification of the virtues: the correlative vices	
2a. The division of virtues according to the parts or powers of the soul: the distinction between moral and intellectual virtue, the theory of the cardinal virtues	
(1) Enumeration and description of the moral virtues	
(2) Enumeration and description of the intellectual virtues	
2b. The distinction between natural and supernatural virtues	989
2c. The appearances of virtue: imperfect or conditional virtues; the counterfeits of virtue, natural or temperamental dispositions which simulate virtue	
3. The order and connection of the virtues	
3a. The equality and inequality of the virtues: the hierarchy of virtue and the degrees of vice	
3b. The independence or interdependence of the virtues	
4. The natural causes or conditions of virtue	990
4a. Natural endowments: temperamental dispositions toward virtue or vice; the seeds or nurseries of virtue	
4b. The role of teaching in the spheres of moral and intellectual virtue	
4c. Training or practice as cause of virtue or vice: the process of habit formation	991
4d. The role of the family and the state in the development of moral virtue	
(1) The influence of parental authority on the formation of character	
(2) The moral use of rewards and punishments: the role of precept and counsel, praise and blame	992
(3) The guidance of laws and customs: the limits of positive law with respect to commanding virtue and prohibiting vice	
(4) The influence on moral character of poetry, music, and other arts: the guidance of history and example	993

	PAGE
4c. The moral quality of human acts	993
(1) The distinction between human or moral acts and the nonvoluntary or reflex acts of a man	
(2) The criteria of goodness and evil in human acts	994
(3) Circumstances as affecting the morality of human acts	
5. Psychological factors in the formation of moral virtue	995
5a. The emotions and pleasure and pain as the matter of virtue: the role of desire or appetite	
5b. Deliberation and judgment in the formation of virtue: the role of reason	
5c. Intention and choice as conditions of virtue: the role of will	996
6. Virtue in relation to other moral goods or principles	
6a. Duty and virtue	
6b. The relation of virtue to pleasure	
6c. The relation of virtue to wealth	997
6d. Virtue and honor	998
6e. Virtue in relation to friendship and love	
7. The role of virtue in political theory	999
7a. The cultivation of virtue as an end of government and the state	
7b. Civic virtue: the virtue of the good citizen compared with the virtue of the good man	
7c. The aristocratic principle: virtue as a condition of citizenship or public office	1000
7d. The virtues which constitute the good or successful ruler: the vices associated with the possession of power	
8. The religious aspects of virtue and vice	1002
8a. The moral consequences of original sin	
8b. The influence of religion on moral character: the indispensability of divine grace for the acquisition of natural virtue by fallen man	
8c. The divine reward of virtue and punishment of vice: here and hereafter	1003
8d. The theory of the theological virtues	1004
(1) Faith and disbelief	
(2) Hope and despair	1005
(3) Charity and the disorder of love	
8e. The infused virtues and the moral and intellectual gifts	1006
8f. The qualities which flow from charity: humility, mercy, chastity, obedience	
8g. The vows and practices of the monastic life in relation to virtue	1007
9. The advance or decline of human morality	

REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and page numbers of the passages referred to. For example in 4 HOMER *Iliad* BK II [265 283] 12d the number 4 is the number of the volume in the set the number 12d indicates that the passage is in section d of page 12.

PAGE SECTIONS. When the text is printed in one column the letters a and b refer to the upper and lower halves of the page. For example in 53 JAMES *Psychology* 116a 119b the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns the letters a and b refer to the upper and lower halves of the left hand side of the page the letters c and d to the upper and lower halves of the right hand side of the page. For example in 7 PLATO *Symposium* 163b 164c the passage begins in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 164.

ARTICLE DIVISIONS. One or more of the main divisions of a work (such as PART BK CH, SECT) are sometimes included in the reference line numbers in brackets are given in certain cases, e.g. *Iliad* BK II [265 283] 12d.

BIBLICAL REFERENCES. The references are to book chapter and verse. When the King James and Douay version differ in title of books or in the numbering of chapters or verses the King James version is cited first and the Douay indicated by a (D) follows e.g. OLD TESTAMENT *Nehemiah* 7 45—(D) *II Esdras* 7 46.

SYMBOLS. The abbreviation esp calls the reader's attention to one or more especially relevant parts of a whole reference. passim signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references see the Explanation of Reference Style for general guidance in the use of *The Great Idea* consult the Preface.

Chapter 98: WAR AND PEACE

INTRODUCTION

THE twentieth century may go down in history as the century of war and peace—the first in which world wars were fought, the first in which men established world peace, and so, perhaps, the last in which peace among nations was merely an armed truce, a breathing spell between wars. Even if world peace is not actually begun in our time, we may prove to be the first generation of men on earth who, under the impact of world wars, have made a firm attempt to draw a decisive conclusion from all the accumulated wisdom concerning war and peace.

It may be thought that antiquity anticipates, and that at all times the tradition contains, the fundamental notions which have recently gained so wide a currency. Socrates and Epictetus, for example, speak of world citizenship. Marcus Aurelius and Zeno the Stoic even more explicitly envision a world community. Alexander tries to conquer the world to make it one; Virgil proclaims a peace which will be as universal as the Roman empire, and Dante, recasting Virgil's vision, advocates the re-enactment of that empire and with it monarchy—by which he means *one* government—to give all Christendom political as well as spiritual unity.

To neglect these anticipations would be to overlook wisdom's perennial aspirations for unity. But if, because of their significance for peace, they should not be neglected here, neither should their importance be exaggerated. For one thing, man has always acted at variance with his wisdom, nullifying the hope of peace by preparing always for the next war. For another thing, it is doubtful that peace by conquest or by empire—the only ways in which the past could conceive the world's coming to the unity of peace—would be a peace perpetual as well as universal. The latter without the former is but a fraction of the ideal.

Even when in modern times the ideal is at last stated in terms of peaceful methods for achieving peace—by law, not by force, by consent, not by imposition—something less than the whole world in its global reality is the object of consideration. William Penn and Rousseau, for example, state the indispensable legal conditions for turning Europe from a continent perpetually wracked by wars into a society able to perpetuate peace—but their historical location causes them to limit their proposals to Europe.

Kant alone first makes the generalization which lies dormant in their reasoning and which almost begs to be inductively drawn from the conceptions of war and peace so plainly stated by Hobbes and Locke. He conceives the possibility of a peace not only perpetual but truly world wide. Yet for all the rightness he perceives in what he calls "the cosmopolitical ideal," it seems to remain for him an ideal—not attainable except by approximation. Yet because it is right, he holds that it must be pursued even though it is impossible. We are the first generation to argue for world peace as a conclusion on the level of reality and to conclude that it is possible because it is necessary.

The argument is not yet won, nor the conclusion enacted, but henceforth the problem of war and peace can hardly be discussed without stating the issue as a choice of world government and peace, or of world anarchy and war. If it does no more than seriously face that choice for the first time, the twentieth century makes a signal advance in understanding one of the great ideas—an advance which can change the course of history and the life of man more than the discovery of atomic fission, which is only an instrument of war or a tool of peace. But just as the release of heat and energy from nuclear combustion has its prototype in ordinary fire, which the ancients associate with the beginning

of civilization, so the insight which may exert a new civilizing force has its origin in the fundamental thinking man does about war and peace as soon as he begins to think about society.

IN THE TRADITION OF the great books, war and peace are usually discussed in political terms, or at least in terms of the relation of men to one another, individually or in groups. But the psychologist, the moralist, and the theologian sometimes use the word "peace" in another sense to signify the absence of conflict within the individual or to signify an inner harmony—peace of mind on earth or the heavenly rest of the blessed in the presence of God.

In their spiritual meanings, war and peace are considered in other chapters; *e.g.*, interior conflict is a topic in the chapter on OPPOSITION and interior peace is discussed in the chapter on HAPPINESS. We shall not treat these matters here except in their bearing on the social or political discussion; nor shall we consider civil war except for the light it throws on the nature of war and peace in general. The special problem of discord and strife within a single community belongs to the chapter on REVOLUTION.

Certain attitudes toward war between states seem to recur in every century. In the face of the ever-present fact of war, men deplore its folly or find some benefit to compensate for its devastation. But throughout most of the tradition, those who see only suffering, no less than those who celebrate the martial spirit, seem to accept the necessity of war. Good or bad, or a mixture of the glorious and the horrible, war seems, to most of those who write about it, an inevitable thing—as ineradicable as disease and death for the living body, as inescapable as tragedy. Only in recent times has the inevitability of war been questioned, and the possibility of lasting peace proposed.

The two books which look most steadily and searchingly on the face of war—Homer's *Iliad* and Tolstoy's *War and Peace*—seem to behold it as a mixed thing. Battle with sword and javelin on the plains of Troy or with musket and howitzer on the Russian steppes lets loose a fury which sweeps human nature to extremes of nobility and baseness, to actions of heroic strength and cringing weakness. To both Homer and

Tolstoy, war is the realm of force and chance, and though both see in it occasions for courage and magnanimity and even for a kind of charity or at least compassion, the whole spectacle is one of agony, pervaded by darkness and dismay, torn bodies and ruined minds. "Grievous war" is Homer's repeated epithet. "Pale fear" and "black death" are the colors of battle. They are everywhere that Ares reigns, "Ares, blood stained bane of mortals," "stubborn god of war."

To the poet of any century, Homer or Tolstoy, Virgil or Shakespeare, war's human features appear to be unchanged even if its mechanical dress and physical lineaments are altered—its weapons and armor, its organization of men and materials, its scope of operations in space and time. The historian who measures the contestants and keeps the score of victories and defeats takes a different view. He dwells on all the differences which mark progress in the art of war, or which enable wealthier and more advanced societies to wage wars of greater magnitude. To Herodotus, no military undertaking ever assumed the proportions of Xerxes' army on the march, raising a cloud of dust from horizon to horizon. Yet Thucydides says that before the Peloponnesian War "there was nothing on a great scale either in war or in other matters."

The historian is attentive not only to weights and numbers, to the changing accoutrement of war and its mechanical elaboration, but also to inventions in the sphere of strategy and tactics. The Alexandrian phalanx, the patience of Fabius, the forced marches of Caesar, Hannibal's outflanking and enveloping movements at the battle of Cannae, the deployment in depth of the Roman legions on the Rhine—these are but a few of the inventions of military genius which, as Plutarch, Tacitus, and Gibbon recognize, have an effect far beyond the advantage that novelty initially gives them. They become the classical models of war's art and the principles of its science.

Tolstoy may scoff at the historians who stand in awe of military genius. He may be right that Kutuzov's lack of plans rather than Napoleon's air of outwitting all contingencies is the essence of great generalship. Nevertheless Tolstoy magnifies the campaign of 1812 as beyond comparison the greatest mass movement of humanity,

from west to east and then from east to west, just as Herodotus apotheosizes the movement of the Persian horde from east to west and Thucydides the rise of Athenian naval power.

Writing from the center of a whole continent in arms a century later, Freud in 1915 gives his impression of what was yet to become the first world war. A war of such proportions and ferocity was almost incredible before it happened. "Then the war in which we had refused to believe broke out," and, Freud writes, "not only is it more sanguinary and more destructive than any war of other days, because of the enormously increased perfection of weapons of attack and defense; but it is at least as cruel, as embittered, as implacable as any that preceded it. . . . It tramples in blind fury on all that comes in its way, as though there were to be no future and no goodwill among men after it has passed. It rends all bonds of fellowship between the contending peoples, and threatens to leave such a legacy of embitterment as will make any renewal of such bonds impossible for a long time to come."

THE ENEMIES OF WAR use a variety of weapons in their attack. The *Trojan Women* of Euripides cries out with the bitterness of Andromache and Hecuba against the misery of war's innocent victims—the women and children who are left to mourn the vanquished or to become the victors' spoils. Aristophanes turns laughter rather than pity and fear against the waste of war. Such comedies as the *Peace*, the *Acharnians*, the *Lysistrata* make light of the issues over which men fight, and give war the aspect of a wearisome business, preposterous in its motives and hollow in its victories.

The genial satire of Rabelais exposes the impostures of war, but beneath the horseplay which deflates by its exaggerations, there is the earnest, serious note of Grangousier's resolution not to "undertake war until I have first tried all the ways and means of peace." Swift's satire is not so amiable. In the eyes of the truly rational Houyhnhnms, war appears to be as senseless and despicable as the Yahoos who wage it. Gulliver tries to tell the Houyhnhnm who is his master about the wars of Europe, their causes and their cost. "I was going on to more particulars," he relates, "when my master com-

manded me silence. He said whoever understood the nature of the Yahoos might easily believe it possible for so vile an animal to be capable of every action I had named, if their strength and cunning equalled their malice. . . . When a creature pretending to reason could be capable of such enormities, he dreaded lest the corruption of that faculty might be worse than brutality itself. He seemed therefore confident that, instead of reason, we were only possessed of some quality fitted to increase our natural vices."

According to Augustine, it is not man's nature but his sinfulness which degrades him below the beasts "devoid of rational will," who "live more securely and peaceably with their own kind than men. . . . For not even lions or dragons have ever waged with their kind such wars as men have waged with one another." Calling it "the greatest and most pompous of human actions," Montaigne asks whether war is not "the testimony of our weakness and imperfection; for, in truth the science of undoing and killing one another, and of ruining and destroying our own kind, has nothing in it so tempting as to make it coveted by beasts who have it not."

But in his essay *Of Ill Means Employed to a Good End*, Montaigne also quotes Juvenal's remark that "we suffer the ills of a long peace; luxury is more pernicious than war." He seems to approve the Roman policy of maintaining wars "not only to keep their own men in action, for fear lest idleness, the mother of corruption, should bring upon them some worse inconvenience; but also to serve for a blood-letting to their Republic, and a little to evaporate the too vehement heat of their youth." War as a purgative is a familiar theme. Hobbes, like Malthus later, suggests that "when all the world is overcharged with inhabitants, then the last remedy of all is war; which provideth for every man, by victory or death."

Many writers seem to be ambivalent about war. Plato, for example, seems to see both sides of the question though he does not give them equal weight. In the *Republic*, Socrates proclaims the discovery that war is "derived from causes which are also the causes of almost all the evils in states, private as well as public." In the *Laws*, the Athenian Stranger admits to Cleinias the Cretan that the laws of his city, devised

primarily with a view to war, can be justified insofar as they aim at courage; but he reminds him later that insofar as such laws "regarded a part only, and not the whole of virtue, I disapproved of them."

That he regards permanent peace as the ideal toward which the moral law commands us to strive, does not prevent Kant from saying that "a prolonged peace favours the predominance of a mere commercial spirit, and with it a debasing self-interest, cowardice, and effeminacy, and tends to degrade the character of the nation." Nor is war to be absolutely condemned. "Provided it is conducted with order and a sacred respect for the rights of civilians," war itself, says Kant, "has something sublime about it, and gives nations that carry it on in such a manner a stamp of mind only the more sublime the more numerous the dangers to which they are exposed, and which they are able to meet with fortitude." Yet even while thinking that war can be a "spur for developing to the highest pitch all talents that minister to culture," Kant reflects that the underlying purpose of war may be "to prepare the way for a rule of law governing the freedom of states, and thus bring about their unity in a system established on a moral basis."

Hegel alone is not ambivalent. Not only is war not "to be regarded as an absolute evil," but it is, according to Hegel, a necessary corrective for the corrosive influence of peace. "War is a state of affairs," he writes, "which deals in earnest with the vanity of temporal goods and concerns—a vanity at other times the common theme of edifying sermonizing. . . . War has the higher significance that by its agency, as I have remarked elsewhere, 'the ethical health of peoples is preserved in their indifference to the stabilization of finite institutions; just as the blowing of the winds preserves the sea from foulness which would be the result of a prolonged calm, so also the corruption in nations would be the product of prolonged, let alone "perpetual," peace.'"

Far from agreeing with those who advocate "perpetual peace . . . as an ideal towards which humanity should strive," Hegel points out that "in peace civil life continually expands; all its departments wall themselves in, and in the long run men stagnate. . . . As a result of war, na-

tions are strengthened, and people involved in civil strife also acquire peace at home through making wars abroad."

To Prince Andrew in *War and Peace* who says that "the aim of war is murder; the methods of war are spying, treachery, and their encouragement"; or to Freud who says that "the warring state permits itself every such misdeed, every such act of violence, as would disgrace the individual man," Hegel has an answer. "States are not private persons," he says, "but completely autonomous totalities in themselves, and so the relation between them differs from a moral relation and a relation involving private rights. . . . The relation between states is a relation between autonomous entities which make mutual stipulations, but which at the same time are superior to these stipulations."

Self-interest, or "a will for its own welfare pure and simple," is, according to Hegel, "the highest law governing the relation of one state to another." Therefore, "when politics is alleged to clash with morals . . . the doctrine propounded rests on superficial ideas about morality, the nature of the state, and the state's relation to the moral point of view."

IN HEGEL'S VIEW, "wars occur when the necessity of the case requires." He is not alone in thinking war inevitable, but others who think the same do not do so in the same mood, or with the same opinion of the reason for its inevitability. "Drain the blood from men's veins," declares Prince Andrew's father, "and put in water instead, then there will be no more war!" It is an illusion, Freud thinks, to suppose that civilization so transforms human nature as to lift it above the impulses of war. In war, he says, "our fellow-citizens have not sunk so low as we feared, because they have never risen so high as we believed." The sad fact, he concludes, is that "war is not to be abolished; so long as the conditions of existence among the nations are so varied, and the repulsions between peoples so intense, there will be, there must be, wars."

William James finds the human race as bellicose as its individual members are instinctively pugnacious; and Alexander Hamilton says that if we "judge from the history of mankind, we shall be compelled to conclude that the fiery

and destructive passions of war reign in the human breast with much more powerful sway than the mild and beneficent sentiments of peace, and that to model our political systems upon speculations of lasting tranquility, is to calculate on the weaker springs of human character."

To the extent that even those who deplore war despair of lasting peace, Machiavelli may not be too cynical a realist when he advises the prince that he "ought to have no other aim or thought, nor select anything else for his study, than war and its rules and discipline. When princes have thought more of ease than of arms, they have lost their states." The prince "ought never, therefore, to have out of his thoughts this subject of war, and in peace he should addict himself more to its exercise than in war." The prince who delays in order to save himself from war makes a serious mistake. War Machiavelli tells him, "is not to be avoided, but is only deferred to your disadvantage."

Like Machiavelli, Cleinias the Cretan in Plato's *Lysis* justifies his city's constant preoccupation with war or preparation for war. The world is foolish, he thinks, "in not understanding that all men are always at war with one another. For what men in general term peace [is] only a name, in reality every city is in a natural state of war with every other, not indeed proclaimed by heralds, but everlasting."

Both Plato and Aristotle seem to agree that war is somehow rooted in the nature of things—in the nature of men and the nature of cities. Yet both also look upon war as transitory, even if recurrent. "No one can be a true statesman," the Athenian Stranger tells Cleinias, "who looks only, or first of all, to external warfare, nor will he ever be a sound legislator who orders peace for the sake of war, and not war for the sake of peace." The whole of life, according to Aristotle, is "divided into two parts, business and leisure, war and peace. . . . There must be war for the sake of peace, business for the sake of leisure, things useful and necessary for the sake of things honorable. Men must be able to engage in business and go to war, but leisure and peace are better; they must do what is necessary and indeed what is useful, but what is honorable is better."

But how does war produce peace? One an-

swer may be Tristram Shandy's, that "as war begets poverty, poverty peace." Another may be Virgil's. In the opening book of his *Aeneid*, Jove predicts the coming of a Caesar "destined to bound with ocean his domain, as with the stars his glory." When at last Rome has conquered the world, the golden age of peace—or at least the *pax Romana*—will supplant war's age of iron. "Then war shall be laid aside, and the harsh world soften to peace: the accursed gates of Battle shall be shut with iron bar and clenching bolt, and godless Frenzy shall sit within upon the weapons of savagery."

In accordance with this heaven-laid destiny, Anchises bids his son Aeneas to make war for the sake of peace. "Roman, be this thy care—these thine arts—to bear dominion over the nations and to impose the law of peace to spare the humbled and to war down the proud! But some of the proud who are subjugated by Rome's legions take a different view of the peace that is imposed by force of arms. Tacitus reports the speech of the British chieftain Calgacus in which he refers to those "terrible Romans from whose oppression escape is vainly sought by obedience and submission. To robbery, slaughter, plunder, they give the lying name of empire; they create a wilderness and call it peace."

Augustine more soberly reflects on the inevitable frustration of the Roman kind of peace. "The imperial city," he writes, "has endeavored to impose on subject nations not only her yoke, but her language as a bond of peace. How many great wars, how much slaughter and bloodshed, have provided this unity. And though these are past, the end of these miseries has not yet come. For though there have never been wanting, nor are yet wanting, hostile nations beyond the empire, against whom wars have been and are waged, yet supposing there were no such nations, the very extent of the empire itself has produced wars of a more obnoxious description—social and civil wars—and with these the whole race has been agitated, either by the actual conflict or the fear of a renewed outbreak."

DESPITE HIS PERCEPTION of war's failures, despite his enjoining the wise men, not merely to wage, but "to lament the necessity of just wars," Augustine holds that it is "with the desire for

peace that wars are waged. . . . Every man seeks peace by waging war, but no man seeks war by making peace. For even they who intentionally interrupt the peace in which they are living have no hatred of peace, but only wish it changed into a peace that suits them better. . . . Even those whom they make war against they wish to make their own, and impose on them the laws of their own peace."

Peace, according to Augustine, consists in harmony and concord. "Peace between man and man is well-ordered concord. Domestic peace is the well-ordered concord between those of the family who rule and those who obey. Civil peace is a similar concord among the citizens. . . . The peace of all things is the tranquillity of order." Without disagreeing essentially, Aquinas explains that peace involves more than concord. "Wherever peace is," he says, "there is concord, but there is not peace wherever there is concord, if we give peace its proper meaning." The peace between men may consist in concord, "not indeed any kind of concord, but that which is well-ordered, through one man agreeing with another in respect of something befitting to them both. For if one man agree with another, not of his own accord, but through being forced . . . such concord is not really peace."

For men to be at peace with one another, Aquinas believes, each must be at peace with himself, but "man's heart is not at peace, so long as he has not what he wants, or if, having what he wants, there still remains something for him to want." This, according to Aquinas, explains why Augustine defined peace not simply as concord, but as *the tranquillity of order*. for by "tranquillity" is meant all the desires of each individual man "being set at rest together." It also explains why "those who seek war and dissension, desire nothing but peace, which they deem themselves not to have. For," Aquinas reminds us, "there is no peace when a man enters into concord with another counter to what he would prefer. Consequently men seek by means of war to break this concord, because it is a defective peace, in order that they may obtain peace, where nothing is contrary to their will. Hence all wars are waged that men may find a more perfect peace than that which they had heretofore."

The fundamental insight here seems to be that, though charity or love produces the unity of peace, peace is also "the work of justice"—indirectly, as Aquinas says, "insofar as justice removes the obstacles to peace." Thucydides gives us an historian's confirmation of the theologian's point. He tells us why he considers the long truce or armistice—a period of no actual fighting—to be a part of the war. "Only a mistaken judgment," he writes, "can object to including the interval of treaty in the war. Looked at by the light of facts it cannot, it will be found, be rationally considered a state of peace, where neither party either gave or got back all that they had agreed upon."

To the same effect is the speech of Hermocrates the Syracusan, which Thucydides reports. "That war is an evil is a proposition so familiar to everyone that it would be tedious to develop it. No one," he declares, "is forced to engage in it by ignorance, or kept out of it by fear, if he fancies there is anything to be gained by it. . . . I suppose that no one will dispute that we went to war at first, in order to serve our several interests; that we are now, in view of the same interests, debating how we can make peace; and that if we separate without having as we think our rights, we shall go to war again."

THUCYDIDES' OBSERVATION THAT periods of armistice or truce are part of war, and the remark of Cleinias in Plato's *Laws* that "every city is in a natural state of war with every other," may anticipate Hobbes, but full clarity on the point is not reached until Hobbes explicitly distinguishes between war as battle and the state of war which always prevails between men or nations when they do not live together under a common government.

"War consisteth not in battle only," Hobbes explains, "or in the act of fighting; but in a tract of time, wherein the will to contend by battle is sufficiently known; and therefore the notion of time is to be considered in the nature of war, as it is in the nature of weather. For as the nature of foul weather lyeth not in a shower or two of rain, but in an inclination thereto of many days together, so the nature of War consisteth not in actual fighting but in the known disposition thereto, during all the time there

is no assurance to the contrary. All other time is Peace."

Hobbes does not exclude from the condition of peace differences between men or even discord, but only fighting or the need to resort to fighting as a way of settling differences or resolving conflicts. He is cognizant of the distinction which Machiavelli paraphrases from Cicero. "There are two ways of contesting," Machiavelli writes, "the one by law, the other by force; the first method is proper to men, the second to beasts." Here Machiavelli adds the comment that "because the first is frequently not sufficient, it is necessary to have recourse to the second." But Hobbes does not think it is always necessary. At least there is a cure for "the war of every man against every man." That cure is the formation of a commonwealth and the institution of government with sufficient coercive force to maintain law and secure peace. "Anarchy and the condition of war," according to Hobbes, are one and the same, a condition in which each man, being a law unto himself and judge in his own case, must of necessity resort to force if he would impose his will upon, or resist the will of, another.

Since men are everywhere found in societies, living under law and government, it might seem that the universal state of war to which Hobbes refers is now abolished. Not so, according to Hobbes, for "though there had never been a time wherein particular men were in a condition of war one against another; yet," in his opinion, "in all times, kings and persons of sovereign authority, because of their independency, are in continual jealousies, and in the state and posture of gladiators; having their weapons pointing, and their eyes fixed on one another; that is, their forts, garrisons, and guns upon the frontiers of their kingdoms, and continual spies upon their neighbors; which is a posture of War."

This notion that sovereigns are always in a state of war with one another—because being sovereigns they are autonomous, *i.e.*, not subject to any superior government—seems to be accepted by most of the great political writers who come after Hobbes. The point is sometimes differently formulated, but the basic insight remains essentially the same.

Locke, for example, makes a threefold dis-

inction between the state of nature, which is anarchy or complete independence; the state of war, in which force without authority is resorted to by men to settle their differences; and the state of civil society which provides law and government for the arbitration of disputes. "Civil society," he writes, is "a state of peace amongst those who are of it, from whom the state of war is excluded by the unipirage which they have provided in their legislative for the ending all differences that may rise amongst any of them."

Since Locke holds that "want of a common judge with authority puts all men in a state of nature," it follows for him that, though the state of nature and the state of war may not be identical, the state of nature, unlike that of civil society, inevitably lapses into the state of war. If in a state of nature men fail to settle their differences by reason, they enter into the state of war which is the realm of force "or a declared design of force . . . where there is no common superior on earth to appeal to for relief."

With these qualifications, Locke not only agrees with Hobbes that "all princes and rulers of independent governments all through the world are in a state of nature," but also draws from this the same implication for war and peace. Since "the whole community is one body in the state of nature in respect of all other states or persons out of its community," Locke argues that the government of each state must have "the power of war and peace, leagues and alliances," in relation to everything external to itself.

Montesquieu and Rousseau slightly alter Hobbes' point by attributing the origin of war itself to the existence of separate societies. War, writes Rousseau, "is a relation, not between man and man, but between State and State." Because they are "in a state of nature among themselves," bodies politic experience, in his opinion, "the inconveniences which had obliged individuals to forsake it. . . . Hence arose national wars, battles, murders and reprisals, which shock nature and outrage reason."

Hegel's ultimate reason for thinking that war is ineradicable seems to be not merely that sovereign states are "in a state of nature in relation to each other," but that they must always re-

main so. "There is no Praetor to judge between states," he writes; "at best there may be an arbitrator or a mediator, and even he exercises his functions contingently only, *i.e.*, in dependence on the particular wills of the disputants."

That is why Hegel dismisses Kant's idea "for securing 'perpetual peace' by a League of Nations to adjust every dispute. . . . This idea," Hegel writes, "presupposes an accord between states; this would rest on moral and religious or other grounds and considerations, but in any case would always depend ultimately on a particular sovereign will and for that reason would remain infected with contingency." Hence, he concludes, "if states disagree and their particular wills cannot be harmonized, the matter can only be settled by war."

KANT AGREES THAT, in the absence of what he calls a "cosmo-political constitution" or world state, "war is inevitable." In their external relations to one another, states, "like lawless savages, are naturally in a non-judicial condition," and this, according to Kant, "is a state of war, in which the right of the stronger prevails; and although it may not in fact be always found as a state of actual war and incessant hostility . . . yet the condition is wrong in itself in the highest degree, and the nations which form States contiguous to each other are bound mutually to pass out of it."

How shall this be accomplished? Is Kant's idea the one Hegel attributes to him? Is the "alliance of nations," of which he speaks, to be a "league of nations" or does he have something more than that in mind when he says that "this mutual connection by alliance" must "take the form of a Federation"?

On the one hand, he calls for "a universal Union of States analogous to that by which a Nation becomes a State," and argues that "it is only thus that a real *state of Peace* could be established." But on the other, he explains that he means "only a voluntary combination of different States that would be *dissoluble* at any time, and not such a union as is embodied in the United States of America, founded upon a political constitution, and therefore indissoluble."

The arguments for the federal constitution of the United States help to make this issue

clear. The authors of the Constitution regard it as providing "a more perfect union" than the Articles of Confederation under which the thirteen separate colonies are banded together by little more than treaties or alliances. To the writers of *The Federalist*, who advocate the adoption of a federal union to replace the loose confederacy or league of states, there is no middle ground between the establishment of peace through federal union and the continuation of the state of war between separate states.

"A man must be far gone in Utopian speculations," Hamilton declares, "who can seriously doubt that, if these States should either be wholly disunited, or only united in partial confederacies, the subdivisions into which they might be thrown would have frequent and violent contests with each other. . . . To look for a continuation of harmony between a number of independent, unconnected sovereignties in the same neighborhood, would be to disregard the uniform course of events, and to set at defiance the accumulated experience of ages." In another paper, Hamilton admits that "there is nothing absurd or impracticable in the idea of a league or alliance between independent nations for certain defined purposes precisely stated in a treaty," but he thinks that Europe has taught "an instructive but afflicting lesson to mankind, how little dependence is to be placed on treaties which have no other sanction than the obligations of good faith."

He returns therefore to attack the "visionary or designing men, who stand ready to advocate the paradox of perpetual peace between the States, though dismembered and alienated from each other." What reason have we to expect, he asks, "peace and cordiality between the members of the present confederation, in a state of separation"? It seems to him "an established truth that the several states, in the case of disunion . . . would be subject to those vicissitudes of peace and war, of friendship and enmity with each other, which have fallen to the lot of all neighboring nations not united under one government."

The Federalists do not seriously recommend their prescription for peace as a plan for the whole world. Yet they see the generalization that is implicit in all their reasoning. "Happy would it be," Madison says, "if such a remedy

for its infirmities could be enjoyed by all free governments, if a project equally effectual could be established for the universal peace of mankind!"

John Stuart Mill, writing somewhat later and in the light of the experience of American federation as a peace plan, seems to be even less ready to propose world federal government as the indispensable condition of world peace. He has no doubt that federal union "puts an end to war and diplomatic quarrels." But he does not think that abrogating the distinction between fellow countrymen and foreigners by making them all fellow citizens of an encompassing state—an object which is "one of the worthiest to which human endeavor can be directed"—can, "in the present state of civilization, be promoted by keeping different nationalities of anything like equivalent strength under the same government."

Not only does Kant definitely dismiss the notion of a world union formed along American lines, but even that less perfect union of states which would have the form of a "*Permanent Congress of Nations*," seems to him an impracticable idea in the world as it is at the end of the eighteenth century. "With the too great extension of such a Union of States over vast regions," he writes, "any government of it, and consequently the protection of its individual members, must at last become impossible, and thus a multitude of such corporations would again bring round a state of war."

Nevertheless, Kant refuses to yield completely to this conclusion. "The morally practical reason," he affirms, "utters within us its irrevocable *Veto*: '*There shall be no War*.'" Hence the question no longer is as to whether Perpetual Peace is a real thing or not a real thing, or as to whether we may not be deceiving ourselves when we adopt the former alternative, but we must *act* on the supposition of its being real. We must work for what may perhaps not be realized . . . and thus we may put an end to the evil of wars, which have been the chief interest of the internal arrangements of all States without exception."

And in his *Idea of a Universal History on a Cosmo-Political Plan*, Kant does more than urge upon us our moral duty to work for perpetual peace as prerequisite to "the highest

political good." He engages in prophecy. He pictures the nations of the world "after many devastations, overthrows, and even complete internal exhaustion of their powers" as "driven forward to the goal which Reason might well have impressed upon them, even without so much sad experience. This is none other than the advance out of the lawless state of savages and the entering into a Federation of Nations."

However visionary this idea may appear to be . . . it is nevertheless the inevitable issue of the necessity in which men involve one another."

THE ARGUMENT FOR WORLD GOVERNMENT as the means to world peace is nowhere made in the great books so explicitly as in Dante's *De Monarchia*. "Wherever there can be contention, Dante writes, 'there judgment should exist, otherwise things should exist imperfectly, without their own means of adjustment or correction.' Between any two governments, neither of which is in any way subordinate to the other, contention can arise either through their own fault or that of their subjects. This is evident. Therefore there should be judgment between them. And since neither can know the affairs of the other, not being subordinate (for among equals there is no authority) there must be a third and wider power which rules both within its own jurisdiction."

This third power," Dante continues, is either the world government, or it is not. If it is, we have reached our conclusion, if it is not, it must in turn have its equal outside its jurisdiction, and then it will need a third party as a judge, and so *ad infinitum*, which is impossible. So we must arrive at a first and supreme judge for whom all contentions are judicable either directly or indirectly. . . . Therefore, world-government is necessary for the world." Aristotle, according to Dante, "saw this argument when he said, 'Things hate to be in disorder, but a plurality of authorities is disorder, therefore authority is single.'" But Aristotle certainly did not draw the conclusion that a single government embracing all mankind should be instituted so that "by common law it might lead all toward peace." Nor, with the exception of Kant, does any other great author argue to this conclusion. But, as we have seen, Kant, unlike

Dante, reaches this conclusion only to qualify his acceptance of it and his advocacy of world government.

Nevertheless, several of the great books do contain the nerve of the argument. It is contained in one fundamental proposition that is variously enunciated by Hobbes and Locke, Rousseau and the Federalists. That proposition is: *As anarchy leads to war, government establishes peace, and just laws preserve it.* By inductive generalization, it seems to follow that, if local peace depends on local government, world peace depends on world government.

But if, except for Dante and Kant, no one until the present made this inference, the tradition of western thought does include, not only the essential premise for making the inference, but also the controlling vision of a politically united humanity—all men as fellow citizens, in a single political society embracing the earth.

Kant speaks of "the right of man as a citizen of the world to *attempt* to enter into communion with all others." Epictetus says, "there is but one course open to men, to do as Socrates did: never to reply to one who asks his country, 'I am an Athenian,' or 'I am a Corinthian,' but 'I am a citizen of the universe.'"

Reflecting on the fact that man's "nature is rational and social," Marcus Aurelius declares: "My city and my country, so far as I am Antoninus, is Rome, but so far as I am a man, it is the world." If we look at "what value everything has with reference to the whole," we will perceive that man "is a citizen of the highest city, of which all other cities are like families." The reason which is common to all men dictates a common law of human life. "If this is so,"

Aurelius argues, "we are fellow citizens; if this is so, we are members of one political community; if this is so, the world is in a manner a state."

Aristotle describes how the family is formed by the union of man and wife, parents and children; and from this first of all social units, the tribe or village is formed by a union of families, and the city or state by a union of villages. He does not carry this series on to its natural terminus, but Augustine does. "After the state or city," Augustine says, "comes the world, the third circle of human society—the first being the family, the second the city."

Yet Augustine, who orders earthly peace to the peace of heaven, does not prophesy a single political community of all men living together under one government. The heavenly city, he says, "while it sojourns on earth, calls citizens out of all nations, and gathers together a society of pilgrims of all languages, not scrupling about diversities in the manners, laws, and institutions whereby earthly peace is secured and maintained, but recognizing that, however various these are, they all tend to one and the same end of earthly peace."

One and the same end of earthly peace may require one city of man as well as one city of God. That, according to Dostoevsky, seems to be implied in the fact that "the craving for universal unity is the third and last anguish of men. Mankind as a whole," he writes, "has always striven to organize a universal state. There have been many great nations with great histories, but the more highly developed the more unhappy they were, for they felt more acutely than other people the craving for world-wide union."

OUTLINE OF TOPICS

	PAGE
1. War as the reign of force: the state of war and the state of nature	1021
2. The kinds of war	1022
2a. Civil war and war between states or international war	
2b. Religious wars: the defense and propagation of the faith	
2c. The class war: the conflict of economic groups	

3. The rights of war	1023
3a. The distinction between just and unjust warfare: wars of defense and wars of conquest	
3b. Justice and expediency in relation to the initiation and prosecution of a war: laws governing the conduct of warfare	
4. The causes or occasions of war	1024
4a. The precipitation of war between states: remote and proximate causes; real and apparent causes	
4b. The factors responsible for civil strife	1025
5. The effects of war	1026
5a. The moral consequences of war: its effects on the happiness and virtue of men and on the welfare of women and children	
5b. The political consequences of war: its effects on different forms of government	
5c. The economic consequences of war: the cost of war and the by products of war	1027
6. The conception of war as a political means or instrument	
6a. Conquest, empire, political expansion as ends of war	
6b. Liberty, justice, honor, peace as ends of war	1028
7. The inevitability of war: the political necessity of military preparations	
8. The desirability of war: its moral and political benefits	1029
9. The folly and futility of war	
10. The military arts and the military profession: their role in the state	
10a. The formation of military policy: the relation between the military and the statesman or prince	1030
10b. Different types of soldiery: mercenaries, volunteers, conscripts, militia	1031
10c. The military virtues: the qualities of the professional soldier, education for war	
10d. The principles of strategy and tactics: the military genius	1032
10e. The rise of naval power and its role in war	1033
10f. The development of weapons: their kinds and uses	
10g. The making of truces or alliances as a military device	1034
11. The nature, causes, and conditions of peace	
11a. Law and government as indispensable conditions of civil peace: the political community as the unit of peace	
11b. Justice and fraternity as principles of peace among men	1035
11c. International law and international peace: treaties, alliances, and leagues as instrumentalities of international peace	
11d. World government and world peace	1036

REFERENCES

To find the passages cited, use the numbers in heavy type, which are the volume and page numbers of the passages referred to. For example, in **4** HOMER: *Iliad*, BK II [265-283] **12d**, the number **4** is the number of the volume in the set; the number **12d** indicates that the passage is in section d of page 12.

PAGE SECTIONS: When the text is printed in one column, the letters **a** and **b** refer to the upper and lower halves of the page. For example, in **53** JAMES: *Psychology*, **116a-119b**, the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns, the letters **a** and **b** refer to the upper and lower halves of the left-hand side of the page, the letters **c** and **d** to the upper and lower halves of the right-hand side of the page. For example, in **7** PLATO: *Symposium*, **163b-164c**, the passage begins in the lower half of the left-hand side of page 163 and ends in the upper half of the right-hand side of page 164.

AUTHOR'S DIVISIONS: One or more of the main divisions of a work (such as PART, BK, CH, SECT) are sometimes included in the reference; line numbers, in brackets, are given in certain cases; e.g., *Iliad*, BK II [265-283] **12d**.

BIBLE REFERENCES: The references are to book, chapter, and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses, the King James version is cited first and the Douay, indicated by a (D), follows; e.g., OLD TESTAMENT: *Nehemiah*, 7:45—(D) *II Esdras*, 7:46.

SYMBOLS: The abbreviation "esp" calls the reader's attention to one or more especially relevant parts of a whole reference; "passim" signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references, see the Explanation of Reference Style; for general guidance in the use of *The Great Ideas*, consult the Preface.

Chapter 99: WEALTH

INTRODUCTION

IF the only questions about wealth concerned the means of getting and keeping it, the causes of its increase and decrease, the idea of wealth would be confined to economics. "The end of the medical art is health," writes Aristotle in the *Ethics*, and "that of economics, wealth." But as the *Ethics* indicates, the moralist and the statesman are also concerned with health and wealth—not simply as things to get and keep, but in relation to all other goods and as constituents of the good life and the good society. What is regarded as the end in economics may be only a means in ethics and politics, in which case, Aristotle suggests, the latter sciences subordinate economics, even as politics subordinates military strategy, and military strategy the making and use of armaments.

The discussion of riches in the tradition of the great books exhibits these two ways of considering wealth. The Bible, the poets, historians, and philosophers deal with wealth as a factor in the life of men and societies. They scrutinize the desire for wealth or the love of money in relation to sin and virtue. They raise questions of justice concerning the distribution of wealth, the rights of property, and fairness in exchange—in buying and selling, borrowing and lending, and in compensating the laborer. They describe the effect of poverty and prosperity or opulence upon states, and prescribe the attitude which individual men as well as societies should take toward wealth and poverty.

Throughout it seems to be assumed that wealth is merely a means, however important or indispensable. Though wealth may also be viewed as an end when the problem is one of how to acquire, produce, or increase it, the fact that, when possessed, it should be treated as a means, leads the moralist to condemn not only the miser, the hoarder, or the man who devotes his whole life to making money, but

also those who elevate wealth into the sort of end which justifies any means that can advance its pursuit.

The other approach is that of the economist. Two of the great books—Smith's *Wealth of Nations* and Marx's *Capital*—deal not with wealth as a means, but with the means to wealth. A third, though by title *A Discourse on Political Economy*, is concerned with the principles of government, and with wealth only insofar as, in Rousseau's conception, government includes "the administration of property" as well as the protection of persons. "Provision for the public wants," he writes, is "the third essential duty of government."

Rousseau explains the title of his treatise by reference to the etymology of the word "economy," which "meant originally only the wise and legitimate government of the household for the common good of the whole family." It is in this sense that Aristotle employs the word and that a work sometimes attributed to him bears it as the title. "The meaning of the term," Rousseau goes on, "was then extended to the government of that great family, the State. To distinguish these two senses of the word, the latter is called *general* or *political* economy, the former domestic or particular economy."

Adam Smith uses the term more narrowly. Not only does he limit his inquiry to the nature and causes of wealth, but by specifying "the wealth of nations," he restricts himself to political economy which, he says, has "two distinct objects: first, to provide a plentiful revenue or subsistence for the people, or more properly to enable them to provide such a revenue or subsistence for themselves; and secondly, to supply the state or commonwealth with a revenue sufficient for the public services." In saying that the political economist aims "to enrich

both the people and the sovereign," and that "the great object of the political economy of every country is to increase the riches and power of that country," Smith takes wealth as an end (though it may also be a means, "so far as power depends upon riches") and tries to formulate the natural laws of wealth-making.

Nowhere does he define the quantity of wealth which should satisfy a nation. The natural resources of a country, the size and industry of its population, and various unfavorable contingencies, may set certain bounds to the maximization of wealth. Within these bounds the country which adopts and follows a sound system of political economy—one which accords with the right conception of wealth and its causes—can (and deserves to) become as wealthy as possible.

Yet Smith, in treating wealth as an end and its increase without limit as a good, does not make economics absolutely autonomous. He regards political economy as a part of politics—"a branch of the science of a statesman or legislator"—and to that extent implies that other considerations than wealth may control the policies of a nation in its regulation of agriculture, industry, domestic commerce, and foreign trade.

Furthermore, the larger moral questions which accompany Smith's economic speculations in his *Lectures on Jurisprudence* and his earlier treatise *Of the Moral Sentiments* are not entirely absent from the *Wealth of Nations*. But to the extent that he writes purely as an economist concerned with securing "cheapness or plenty" or, what for him is the same, "wealth and abundance," he adheres to considerations of expediency and only infrequently permits himself *obiter dicta* on justice or questions of right and wrong.

Karl Marx also writes as an economist. He details the factors which govern the production and distribution of wealth as these manifest themselves in the great historic systems of production—the slave economy, the feudal economy, and the bourgeois or capitalist economy. So far he is a scientist and, even more than Adam Smith, an historian who describes how wealth is acquired and how it multiplies by reproducing itself. But Marx is much less content than Smith to stop there. Smith tries to de-

scribe the economic process scientifically in order to prescribe the means a nation should use to become increasingly prosperous, but Marx undertakes to describe it in order to criticize the way in which some men get richer than they need be while others become poorer than they should be.

His critical purpose makes inevitable the expression of moral judgments concerning such inequities; and by implication they are everywhere present. For example, a descriptive phrase like "surplus value" connotes "unearned increment"; an apparently neutral economic term like "profit" is given the invidious moral significance traditionally attached to "usury." Nor does Marx rest with criticism. He has an economic program to propose, a program he reveals more clearly in the *Communist Manifesto* than in *Capital*. The aim is not primarily to increase the production of wealth, but to remedy its inequitable distribution under all past economic systems. This program looks forward to the final revolution which will bring the necessary historic motion of progress to its culmination when socialism replaces capitalism.

SMITH AND MARX, IT APPEARS, are not economists in the same sense. But it may be supposed that, in spite of their different purposes, they would as scientists agree in their description of economic phenomena. To some extent they do, yet the difference in their point of view and aim leads to a quarrel about facts, or at least about their interpretation.

Classical economists in the tradition of Adam Smith dispute the consequences which Marx draws from the labor theory of value, especially with regard to the origin of profit from the surplus product of unpaid labor time. Profit seems to them as much a part of the natural price of commodities as the wages paid to labor and the rent paid to the landlord.

"In exchanging the complete manufacture either for money, for labor, or for other goods, over and above what may be sufficient to pay the price of the materials, and the wages of the workmen, something," writes Smith, "must be given for the profits of the undertaker of the work who hazards his stock in this adventure. The value which the workmen add to the materials, therefore, resolves itself in this case into

two parts, of which the one pays their wages, the other the profits of their employer upon the whole stock of materials and wages which he advanced. He could have no interest to employ them, unless he expected from the sale of their work something more than what was sufficient to replace his stock to him; and he could have no interest to employ a great stock rather than a small one, unless his profits were to bear some proportion to the extent of his stock."

It is precisely on this point of profit as a return for risking one's capital stock that Marx charges Smith, and after him, Ricardo and J. S. Mill, with being apologists for the capitalist system. He quotes Mill's statement that "the cause of profit is that labor produces more than is required for its support." The fact that Mill does not question the validity of this surplus value, which accrues as profit to the *entrepreneur*; the fact that Ricardo treats surplus value, according to Marx, "as a thing inherent in the capitalist mode of production, which mode, in his eyes, is the natural form of social production," is explicable, in Marx's view, only if we recognize that their economic theories mix special pleading with science. "These bourgeois economists instinctively saw, and rightly so," he says, "that it is very dangerous to sur too deeply the burning question of the origin of surplus value."

Though he distinguishes between its classical and vulgar forms, political economy for Marx is a bourgeois science, which "first sprang into being during the period of manufacture." Political economy "has generally been content to take, just as they were, the terms of commercial and industrial life," Engels remarks in a prefatory note to *Capital*, and so it "never went beyond the received notions of profit and rent, never examined this unpaid part of the product (called by Marx surplus-product) in its integrity as a whole, and therefore never arrived at a clear comprehension, either of its origin and nature, or of the laws that regulate the subsequent distribution of its value."

Marx's work is, in his own conception of it, at one and the same time a criticism of the capitalist economy and of the science of economics which accepts and defends that economic system. In his own preface to *Capital*, Marx tells the reader that the "volume which I

now submit to the public forms the continuation" of an earlier work—*A Contribution to the Critique of Political Economy*. Within the sphere of political economy as defined by the problem of augmenting a nation's wealth, the author of the *Wealth of Nations* similarly finds a critique of prevalent economic fallacies—those of the physiocrats and the mercantilists—inseparable from the constructive statement of his own theory.

ECONOMISTS ENGAGE IN controversy over technical points in the analysis of production, exchange, and distribution, or in the development of theories of value and price, money and capital, property and poverty. Such controversy tends to become complicated both by the larger questions in which the economic issues are imbedded, and also by the different points of departure and the different objectives of the economists. What at first may look like a simple issue of fact often fails on closer examination to be capable of resolution by scientific inquiry, or simply by an accurate description of the phenomena.

Even when all relevant matters of fact are determined, conflicting interpretations of their significance remain. Behind these lie divergent presuppositions, often unexpressed. Those who start with different conceptions of the problem, and from different principles assumed rather than argued, tend to reach conclusions which may appear to be opposed but which do not really exclude one another—at least not totally. Each from its own point of view may be true, and from that point of view the other is not so much false as irrelevant.

Smith may be right, for example, when he says that "the consideration of his own private profit is the sole motive which determines the owner of any capital to employ it either in agriculture, in manufactures, or in some particular branch of the wholesale or retail trade. The different quantities of productive labor which it may put into motion, and the different values which it may add to the annual produce of the land and labor of the society, according as it is employed in one or other of those different ways, never enter his thoughts." Smith may be right, not only as to the fact asserted, but also with regard to its implication for the increase

of the nation's wealth: that the wealth of a society increases as owners of capital act from self-interest in a system of free enterprise which permits the possibility of profits to indemnify them against the risk of losses and to reward them for the thrift whereby they accumulated capital to invest productively.

But Marx may also be right when he says that the system of free enterprise and capitalistic production could not have started simply through the thrift of individuals, but required a primitive accumulation of capital. "The accumulation of capital," he says, "presupposes surplus-value; surplus-value presupposes capitalistic production; capitalistic production presupposes the existence of considerable masses of capital and labor-power in the hands of producers of commodities. The whole movement, therefore, seems to turn in a vicious circle, out of which we can only get by supposing a primitive accumulation (previous accumulation of Adam Smith) preceding capitalistic accumulation," a primitive accumulation which is "nothing else than the historical process of divorcing the producer from the means of production." He may be right, furthermore, when he goes on to say that "the economic structure of capitalistic society has grown out of the economic structure of feudal society. . . . The historical movement which changes the producers into wage-workers appears, on the one hand, as their emancipation from serfdom and from the fetters of the guilds . . . but, on the other hand, these new freedmen became sellers of themselves only after they had been robbed of all their own means of production, and of all the guarantees of existence afforded by the old feudal arrangements."

It may be true that a capitalist who privately owns means of production would not invest them without the possibility of gaining a profit. It may be true, as Smith would insist, that he would not be justified in doing so. This, however, does not invalidate—as it is not invalidated by—Marx's theory of the "original appropriation" which, in his opinion, initiated capitalistic enterprise; nor does it conflict with Marx's insistence that the capitalist must exploit labor in order to make profits, since he can derive them only from the surplus value created by wage-laborers who produce more than

is returned to them for their own needs or subsistence.

THE FOREGOING POINT AND counter-point in economic theory must serve as one example of the way in which Smith and Marx pass each other, rather than meet, on many of the basic economic issues. It would be impossible, within the compass of this Introduction, to chart the intricate relationship of their thought, including their agreements and clear oppositions as well as the matters on which they simply diverge because they are discussing the same problem from different viewpoints. The reader can discover for himself in greater detail the pattern of conversation between these two great economists by studying the passages from their works which are cited in the References.

As a glance at the Outline of Topics will show, many of the headings represent technical problems or issues in economic theory, as that is narrowly conceived in modern times. Some, however, are more general. They state themes which place the discussion of wealth in the larger context of moral and political questions and which, throughout the whole tradition, engage poets, historians, and philosophers—not merely the economists of the eighteenth and nineteenth centuries.

To some extent the more general themes are treated in other chapters, such as LABOR, JUSTICE, OLIGARCHY, VIRTUE and HAPPINESS, FAMILY and STATE. Here we shall consider them for their bearing on the nature and kinds, the sources and uses, of wealth, and also its goodness and evil.

THE ANCIENTS CONCEIVE WEALTH as consisting in the variety of external goods which sustain life—food, clothing, and shelter. But wealth may include more than the bare necessities. When Socrates in the *Republic* outlines a simple economy which aims to satisfy only basic needs, Glaucon tells him that he is "providing for a city of pigs." More is required, he says, for "the ordinary conveniences of life. People who are to be comfortable are accustomed to lie on sofas, and dine off tables, and they should have sauces and sweets in the modern style." Socrates replies by projecting "a luxurious State"—"a State at fever heat"—which goes beyond the

necessaries, "such as houses and clothes and shoes. The arts of the painter and the embroiderer," he says, "will have to be set in motion, and gold and ivory and all sorts of materials procured"; and the city will "have to fill and swell with a multitude of callings which are not required by any natural want."

This distinction between necessities and luxuries, which has many implications for ethics and economics as well as for politics, does not draw the line between natural and artificial wealth. Nor is natural wealth identified exclusively with natural resources in their pure state, unconverted by labor for use or consumption. Wealth is generally thought to comprise all consumable goods, whether necessities or luxuries, whether products of hunting, agriculture, or manufacture, and all the means of producing them. Only money is excluded. Only money is declared to be either not wealth at all or artificial wealth.

Yet the confusion of money with wealth seems to be prevalent at all times, as repeated attempts to correct the fallacy indicate. The use of money originates, according to Aristotle, with retail trade, which is "not a natural part of the art of getting wealth"; for, he goes on, "had it been so, men would have ceased to exchange when they had enough." What Aristotle calls retail trade replaces "the barter of necessary articles." Made possible by the use of coin, retail trade, he says, comes to be thought of as "the art which produces riches and wealth."

"Indeed," Aristotle continues, "riches is assumed by many to be only a quantity of coin." But he agrees with those who maintain, to the contrary, that "coined money is a mere sham, a thing not natural, but conventional only . . . because it is not useful as a means to any of the necessities of life, and he who is rich in coin may often be in want of necessary food. But how can that be wealth of which a man may have a great abundance and yet perish with hunger, like Midas in the fable, whose insatiable prayer turned everything that was set before him into gold?"

To say that money in itself cannot satisfy any natural need does not imply that it serves no economic purpose. Plato and Aristotle, Hobbes, Locke, and Kant, as well as Smith and Marx, understand the utility of money as a

medium of exchange, indispensable for "the circulation of commodities"—to use Marx's phrase—beyond the stage of barter. Money is not only a medium of exchange, according to Plato; it "reduces the inequalities and incommensurabilities of goods to equality and common measure"; and Aristotle seems to anticipate Marx's conception of money as the universal form in which all economic values can be expressed when he defines "wealth" to mean "all things whose value is measured by money."

The economic utility of money in exchange and as a measure of value, or even the fact that gold and silver coin may have some intrinsic value because of the labor involved in mining and minting the metals, does not alter the distinction between natural and artificial wealth. "Natural wealth," Aquinas explains, "is that which serves man as a remedy for his natural wants, such as food, drink, clothing, cars, dwellings, and such like; while artificial wealth, such as money, is that which is not a direct help to nature, but is invented by man for the convenience of exchange and as a measure of all things saleable."

The same point is restated by Locke in the seventeenth century, but it is still necessary for Smith a century later to argue against the mercantilist theory of national prosperity, on the ground that it confuses wealth with money. "It would be too ridiculous to go about seriously to prove," Smith writes, "that wealth does not consist in money, or in gold or silver; but what money purchases, and is valuable only for purchasing. . . . Goods can serve many other purposes besides purchasing money, but money can serve no other purpose besides purchasing goods. Money, therefore, necessarily runs after goods, but goods do not always or necessarily run after money. The man who buys, does not always mean to sell again, but frequently to use or consume; whereas he who sells, always means to buy again."

Nevertheless, that "wealth consists in money, or in gold and silver, is a popular notion which naturally arises from the double function of money, as the instrument of commerce, and as the measure of value." The notion is so familiar that, Smith observes, "even they, who are convinced of its absurdity, are very apt to forget their own principles, and in the course of their

reasonings to take it for granted as a certain and undeniable truth. Some of the best English writers on commerce set out with observing that the wealth of a country consists, not in its gold and silver only, but in its lands, houses, and consumable goods of all different kinds. In the course of their reasonings, however, the land, houses, and consumable goods seem to slip out of their memory, and the strain of their argument frequently supposes that all wealth consists in gold and silver, and to multiply these metals is the great object of national industry and commerce."

The two principles of the mercantilist policy are, according to Smith, that "wealth consisted in gold and silver, and that those metals could be brought into a country which had no mines only by the balance of trade, or by exporting to a greater value than it imported." A favorable balance of trade thus necessarily became the sole object of the mercantilists; and, Smith adds, "its two great engines for enriching the country, therefore, were restraints upon importation, and encouragements to exportation."

Since in his opinion the wealth of a nation consists in "the whole annual produce of its land and labor," Smith opposes all such restraints, and with them the protection of monopolies. He advocates free trade and the free competition of producers, within a country as well as between domestic and foreign producers, on the ground that "consumption is the sole end and purpose of all production; and the interest of the producer ought to be attended to, only so far as it may be necessary for promoting that of the consumer. But in the mercantile system," Smith claims, "the interest of the consumer is almost constantly sacrificed to that of the producer." A *laissez-faire* economy, he thinks, not only reverses this situation, but also, by preferring more consumable commodities to more gold and silver, tends to increase the real, not the artificial wealth of a nation.

Marx also criticizes the mercantilist error, but in terms of his theory that "since the production of surplus-value is the chief end and aim of capitalist production . . . the greatness of a man's or a nation's wealth should be measured, not by the absolute quantity produced,

but by the relative magnitude of the surplus-value."

Surplus value cannot be produced by exchange. Against the mercantilists who "derived the excess of the price over the cost of production of the product, from the act of exchange, from the product being sold above its value," Marx quotes Mill's statement that "profit arises, not from the incident of exchange, but from the productive power of labor; and the general profit of the country is always what the productive power of labor makes it, whether any exchange takes place or not."

But this is not the whole picture, according to Marx. Although it is impossible for capital or surplus value "to be produced by circulation," or the exchange of commodities, he also thinks it is "impossible that outside the sphere of circulation, a producer of commodities can, without coming into contact with other commodity owners, expand value, and consequently convert money or commodities into capital." The two sides of the picture are brought together, in Marx's view, by the treatment of labor itself as a commodity, and the buying and selling of labor power in the open market.

THE DISTINCTION BETWEEN REAL wealth and money and the distinction between necessities and luxuries have more than economic significance. They are basic to the moralist's strictures concerning the desire for wealth, its place in the order of goods, and the way it can be put to good use.

It is not only St. Paul who says that "the love of money is the root of all evil." It is not only Christian theologians like Augustine and Aquinas who explain how "lust of the eyes" or covetousness is a capital sin and as such the principle of many other transgressions. As Marx points out, the Greeks also "denounced money as subversive of the economical and moral order of things." In the passage in Sophocles' *Antigone* which he quotes, Creon declares: "Nothing so evil as money ever grew to be current among men. This lays cities low, this drives men from their homes, this trains and warps honest souls till they set themselves to works of shame; this still teaches folk to practice villainies, and to know every godless deed."

Plato condemns the oligarchical state by

comparing it to the miser and money-maker among men. "Such a State," he says, "aims to become as rich as possible, a desire which is insatiable." In the *Laws*, the Athenian Stranger explains why the reasonable statesman should not aim to make "the state for the true interests of which he is advising . . . as great and as rich as possible," if he also "desires to have the city the best and happiest possible"; for though each may be possible alone, they are not possible together. It is impossible, he holds, to be "good in a high degree and rich in a high degree at the same time."

What Plato says of the oligarch, Marx says of the capitalist: "He shares with the miser the passion for wealth as wealth." But, Marx adds, "that which in the miser is a mere idiosyncrasy is, in the capitalist, the effect of the social mechanism, of which he is but one of the wheels." Involved as he is by the system in "the restless never-ending process of profit-making," the individual capitalist, like the miser, exhibits "this boundless greed after riches, this passionate chase after exchange-value."

The root of the evil in the love of money—of "gold, yellow, glittering, precious gold," which Shakespeare calls the "common whore of mankind"—is the boundlessness of the lust. The hoarding of anything springs from an insatiable desire, but because money can be converted into every sort of commodity, it is, according to Marx, the ideal object of hoarding. "The antagonism between the quantitative limits of money and its qualitative boundlessness," he writes, "continually acts as a spur to the hoarder in his Sisyphean-like labor of accumulating."

In the light of such observations, Marx cites with approval Aristotle's distinction between "economic" and "chrematistic" or what Aristotle differentiates as the two arts of wealth-getting. Considering economics as the management of a household, Aristotle says that the art of acquisition which is a natural part of it "must either find ready to hand, or itself provide, such things necessary to life, and useful for the community of the family or state, as can be stored. They are the elements of true riches; for the amount of property which is needed for a good life is not unlimited." But "there is another variety of the art of acquisition which

is commonly and rightly called an art of wealth-getting, and has in fact suggested that riches and property have no limit."

The two arts tend to become confused in men's minds. "Some persons are led to believe," Aristotle observes, "that getting wealth is the object of household management, and the whole idea of their lives is that they ought either to increase their money without limit, or at any rate not to lose it. The origin of this disposition in men is that they are intent upon living only, and not upon living well; and as their desires are unlimited, they also desire that the means of gratifying them should be without limit." Even "those who do aim at a good life seek the means of obtaining bodily pleasures; and, since the enjoyment of these appears to depend upon property, they are absorbed in getting wealth; and thus there arises the second kind of wealth-getting."

Plato, like Aristotle, while admitting the service of retail trade in effecting the exchange of commodities, condemns the tendency of its practitioners to make "gains without limit." In the *Laws*, furthermore, he prohibits interest on loans; and in the *Republic*, he describes this form of money-making as a process in which "men of business . . . insert their sting—that is, their money—into someone else who is not on his guard against them, and recover the parent sum many times over multiplied into a family of children." This biological metaphor for making money out of money appears also in Aristotle. The term "interest," he says, "means the birth of money from money." Of all forms of money-making, this "breeding of money" is, in his opinion, the most unnatural. "Usury, which makes a gain out of money itself," Aristotle writes, violates the natural object of money—"intended to be used in exchange, but not to increase at interest."

INTEREST AND USURY are not distinguished in the Old Testament. "Take thou no usury of him, or increase," is the command in Leviticus. But this rule does not apply to the stranger. "Unto a stranger thou mayest lend upon usury," Deuteronomy says, "but unto thy brother thou shalt not lend upon usury."

A theologian like Aquinas, following both Scripture and Aristotle, condemns, for Chris-

tians, all interest as usury; and Luther also appeals to pagan precept as well as to Scriptural warrant. "The heathen were able, by the light of reason, to conclude that a usurer is a double-dyed thief and murderer," Luther says in a passage which Marx quotes under the comment that the usurer is "that old-fashioned but ever renewed specimen of the capitalist." Castigating his fellow-Christians for holding usurers "in such honor that we fairly worship them for the sake of their money," Luther declares that "whoever eats up, robs, and steals the nourishment of another, that man commits as great a murder (so far as in him lies) as he who starves a man or utterly undoes him. Such does a usurer."

It seems to be a later consequence of the Protestant reformation, as Weber and Tawney point out, that the exaction of interest for the loan of money or goods is defended, and only exorbitant rates of interest are denounced as usurious. The signs of the change may be seen in Pascal's diatribe against the specious casuistry which tries to exempt some forms of interest-taking from the charge of usury; and also in the fact that Montesquieu attributes to the schoolmen, "who adopted from Aristotle, a great many notions on lending upon interest," the mistake of condemning it "absolutely and in all cases." In his own opinion, "to lend money without interest is certainly an action laudable and extremely good; but it is obvious that it is only a counsel of religion, and not a civil law."

Montesquieu thinks a price for the use of money is necessary for the carrying on of trade. If a fair rate of interest is not allowed, nobody will lend money; or rather, Montesquieu says, because "the affairs of society will ever make it necessary," moneylending will inevitably take the form of usury. "Usury increases in Mohammedan countries," he points out, "in proportion to the severity of the prohibition. The lender indemnifies himself for the danger he undergoes of suffering the penalty."

Smith agrees that prohibition, "instead of preventing, has been found from experience to increase the evil of usury." A fair rate of interest is justified, he thinks, because "as something can everywhere be made by the use of money, something ought everywhere to be paid for the use of it. . . . In countries where interest

is permitted, the law, in order to prevent the extortion of usury, generally fixes the highest rate which can be taken without incurring a penalty. This rate ought always to be somewhat above the lowest market price, or the price which is commonly paid for the use of money by those who can give the most undoubted security." Smith offers the British practice as a good example. "Where money is lent to government at three per cent, and to private people upon good security at four, and four and a half, the present legal rate, five per cent, is perhaps as proper as any."

Interest and profit, while not the same in Smith's view, are closely connected. As the revenue from land is rent, from labor wages, and "that derived from stock, by the person who manages or employs it, is called profit," interest is "the compensation which the borrower pays to the lender, for the profit which he has an opportunity of making by the use of the money. Part of that profit naturally belongs to the borrower, who runs the risk and takes the trouble of employing it; and part to the lender, who affords him an opportunity of making this profit." Conceiving interest as a derivative revenue, Smith holds it to be a maxim that "wherever a great deal can be made by the use of money, a great deal will be commonly given for the use of it," so that we may expect to find "the usual market rate of interest" to vary with "the ordinary profits of stock."

THE THEORY WHICH PLACES wealth lowest in the order of goods determines its contribution to human happiness accordingly, and leads to a disapproval of luxuries, on the part of both the individual and society.

"Riches are for the sake of the body, as the body is for the sake of the soul. The latter are good," writes Plato, "and wealth is intended by nature to be for the sake of them, and is therefore inferior to them both, and third in the order of excellence." Aristotle similarly orders wealth, or external goods, to health and other goods of the body, as these in turn are subordinate to the virtues, or goods of the soul; and Hobbes, in somewhat different terms, holds that, of all goods, "those that are dearest to a man are his own life and limbs; and in the next degree (in most men), those that concern con-

jugal affection; and after them riches and means of living."

While Aristotle admits that happiness requires some external prosperity, he always adds that only a moderate amount of external goods is needed. "Happiness, whether consisting in pleasure or virtue, or both," he writes, "is more often found with those who are most highly cultivated in their mind and in their character, and have only a moderate share of external goods, than among those who possess external goods to a useless extent, but are deficient in higher qualities." Aristotle praises Solon for telling Croesus, one of the world's wealthiest men, that happiness requires more than riches. The conversation is narrated by Herodotus.

"What, stranger of Athens," Herodotus reports Croesus as saying, "is my happiness, then, valued so little by you, that you do not even put me on a level with private men?" To which, Solon replies: "Croesus, I see that you are wonderfully rich, and the lord of many nations," but "he who possesses a great store of riches is no nearer happiness than he who has what suffices for his daily needs, unless luck attends him, and so he continue in the enjoyment of all his good things to the end of his life." Aristotle adds the further observation that "one can with but moderate possessions do what one ought" and that "a good life requires a supply of external goods in a less degree when men are in a good state and in a greater degree when they are in a lower state."

Aquinas agrees with Aristotle so far as the happiness of the active life is concerned, but he holds that wealth "does not conduce to the happiness of the contemplative life; rather is it an obstacle thereto." With regard to achieving "the happiness of heaven" in the life hereafter, Aquinas not only thinks wealth an obstacle, but he also explains why the religious orders take the vow of voluntary poverty. "Man is directed to future happiness by charity," he writes; and "in the attainment of the perfection of charity the first foundation is voluntary poverty, whereby a man lives without property of his own."

The opinion that wealth is an obstacle or that it should be sought in moderation does not seem to be universally shared. As Herodotus, Plato, and Aristotle report the prevalence in

the ancient world of the notion that "external goods are the cause of happiness," so Melville reflects that in modern society "the urbane activity with which a man receives money is really marvellous, considering that we so earnestly believe money to be the root of all earthly ills, and that on no account can a monied man enter heaven. Ah! how cheerfully we consign ourselves to perdition!" Marx quotes a still more extravagant claim. In a letter from Jamaica in 1503, Christopher Columbus exclaims: "Gold is a wonderful thing! Whoever possesses it is lord of all he wants. By means of gold one can even get souls into Paradise."

Against Rousseau's attack upon opulence as the cause of civilization with all its miseries, Dr. Johnson rises in the defense of luxuries and the advantages of wealth. "Rousseau's treatise on the inequality of mankind," Boswell writes, "was at this time a fashionable topick. It gave rise to an observation by Mr. Dempster that the advantages of fortune and rank were nothing to a wise man." To this, Dr. Johnson replies: "If a man were a savage, living in the woods by himself, this might be true," but "in civilized society, external advantages make us more respected. . . . Sir, you may make the experiment. Go into the street, and give one man a lecture on morality, and another a shilling, and see which will respect you the most . . .

"And, Sir," he continues, "if six hundred pounds a year procure a man more consequence, and, of course, more happiness than six pounds, the same proportion will hold as to six thousand, and so on as far as opulence can be carried. Perhaps he who has a large fortune may not be so happy as he who has a small one; but that must proceed from other causes than from his having the large fortune; for, *ceteris paribus*, he who is rich in a civilized society, must be happier than he who is poor."

On one occasion, Dr. Johnson seems to share Solon's view. When Boswell suggests that the proprietor of a great estate "must be happy," he exclaims: "Nay, Sir, all this excludes but one evil—poverty." But for the most part, his opinion is that "it is in refinement and elegance that the civilized man differs from the savage," and that it is right for every society to be as luxurious as it can be.

"Many things which are false are transmitted from book to book," he says to General Oglethorpe, "and gain credit in the world. One of these is the cry against the evil of luxury. Now the truth is that luxury produces much good. You will hear it said, very gravely, Why was not the half-guinea, thus spent in luxury, given to the poor? To how many might it have afforded a good meal. Alas! has it not gone to the *industrious* poor, whom it is better to support than the *idle* poor? You are much surer that you are doing good when you *pay* money to those who work as the recompense of their labor, than when you *give* money in charity. . . . And as to the rout that is made about people who are ruined by extravagance, it is no matter to the nation that some individuals suffer. When so much general productive exertion is the consequence of luxury, the nation does not care though there are debtors in gaol."

Dr. Johnson's pronouncements may silence Mr. Dempster and General Oglethorpe, but not Smith or Marx. To Smith, spendthrift extravagance squanders wealth which might have been capitalized for productive purposes; to Marx, the multiplication of luxury products diverts labor power that is socially necessary for producing the means of subsistence into what Veblen later calls forms of "conspicuous waste." Not only, in Marx's view, can the capitalistic system be charged with indifference as to whether its profits are made out of the production of luxuries or necessities; but the workers on starvation wages engaged in the luxury trades constitute a signal indictment of the inequitable distribution of wealth.

AS THE NEEDS OF THE individual are thought to set a natural limit to his acquisition of wealth, or at least to provide him with a rational standard for stopping short of wanton luxuries when he seeks the decencies or amenities of life, so the needs of society as a whole are thought to establish a criterion of justice in the distribution of wealth.

"God gave the world to men in common," says Locke, and "the measure of property nature has well set by the extent of man's labor and the convenience of life. . . . No man's labor could subdue or appropriate all; nor could his enjoyment consume more than a small part; so

that it was impossible for any man, this way, to intrench upon the right of another, who would still have room for as good and as large a possession (after the other had taken out his) as before it was appropriated. Which measure did confine every man's possession to a very moderate proportion, and such as he might appropriate to himself without injury to anybody, in the first age of the world."

This rule of property—"that every man should have as much as he could make use of" without prejudice or injury to others—worked well in the beginning when, as Locke puts it, "all the world was America." It "would still hold in the world without straitening anybody," Locke thinks, "since there is land enough in the world to suffice double the inhabitants, had not the invention of money . . . introduced (by consent) larger possessions and a right to them"; for gold and silver being relatively imperishable, men can hoard excesses of them without appearing to waste them, as they would if they amassed perishable commodities which they could not consume or use.

It is not money but property itself which Rousseau claims to be the origin of inequality among men and of the inequitable distribution of wealth. "The first man who, having enclosed a piece of ground, bethought himself of saying *This is mine*, and found people simple enough to believe him, was the real founder of civil society." Once established as a right, property tends to expand. The larger proprietors avoid the question, "Do you not know that numbers of your fellow-creatures are starving, for want of what you have too much of?" Instead, according to Rousseau, they conceive "the profoundest plan that ever entered the mind of man" to protect their possessions against invasion or plunder. They institute civil government, ostensibly for the security of all, but really to secure for themselves their property and power.

"Such was, or may well have been," Rousseau writes, "the origin of society and law, which bound new fetters on the poor, and gave new powers to the rich; which irretrievably destroyed natural liberty, eternally fixed the law of property and inequality, converted clever usurpation into unalterable right, and, for the advantage of a few ambitious individuals,

subjected all mankind to perpetual labor, slavery, and wretchedness." Adam Smith seems to agree. "Where there is no property," he says, "or at least none that exceeds the value of two or three days labor, civil government is not so necessary. . . . Civil government, so far as it is instituted for the security of property, is in reality for the defense of the rich against the poor, or of those who have some property against those who have none at all."

But, unlike Smith, Rousseau has an alternative to propose. "Since it is plainly contrary to the law of nature . . . that the privileged few should gorge themselves with superfluities while the starving multitude are in want of the bare necessities of life," he thinks it is "one of the most important functions of government to prevent extreme inequalities of fortunes; not by taking away wealth from its possessors, but by depriving all men of means to accumulate it; not by building asylums for the poor, but by securing the citizens from becoming poor."

THIS STATES AN END, but not the means for achieving it. The problem of poverty is not so easily solved, if it can be solved at all, once the right of property is admitted: Rousseau, for example, no less than Locke and others before him, affirms this right which, for Kant and Hegel later, is almost the whole substance of private or abstract right. "The right of property," says Rousseau, "is the most sacred of all the rights of citizenship, and even more important in some respects than liberty itself." Yet it is difficult, he admits, "to secure the property of individuals on one side, without attacking it on another; and it is impossible that all the regulations which govern the order of succession, wills, contracts, etc., should not lay individuals under some constraint as to the disposition of their goods, and should not consequently restrict the right of property."

To Hegel, poverty seems to be an inevitable consequence of property, as war is an inevitable consequence of sovereignty, and in neither case can the cause be abolished. "When the masses begin to decline into poverty," as they must, they can be supported from public funds and private charities, thus receiving "subsistence directly, not by means of their work," or as an alternative, "they might be given subsist-

ence indirectly through being given work." But, Hegel adds, "in this event the volume of production would be increased, but the evil consists precisely in an excess of production and in the lack of a proportionate number of consumers who are themselves also producers, and thus it is simply intensified by both of the methods by which it is sought to alleviate it." Hence, Hegel concludes, it "becomes apparent that despite an excess of wealth civil society is not rich enough . . . to check excessive poverty and the creation of a penurious rabble. This inner dialectic of civil society thus drives it -- or at any rate a specific civil society -- to push beyond its own limits and seek markets, and . . . its necessary means of subsistence, in other lands which are either deficient in the goods it has over-produced, or else generally backward in industry."

Imperialism, according to Marx, will not long work as a cure for what Tawney later calls "the sickness of an acquisitive society"—the inner frustration which Marx sees manifested in recurring economic crises and depressions of greater and greater magnitude. Nor does he propose the abolition of all private property as the remedy for poverty, when he calls for "the expropriation of the expropriators." On the contrary, only the possession by each individual of an adequate supply of consumer's goods can abolish poverty. Differentiating between individual and capitalist property, according as its owners are or are not laborers, and according as it consists in consumable goods or the means of production, Marx would transfer the latter from private property to public ownership.

The socialist economy he outlines also includes "abolition of property in land, and application of all rents of land to public purposes; a heavy progressive or graduated income tax; abolition of all right of inheritance." It includes "centralization of credit in the hands of the state, by means of a national bank with State capital and an exclusive monopoly," and also "centralization of the means of communication and transport." Last but not least, it includes "equal liability of all to labor."

More radical than Marx's socialism is the communism Plato proposes in the *Republic*. Plato's aim is not to solve the problem of poverty or economic injustice. By abolishing

for his guardian class *all* private property, he hopes that his guardians through sharing common possessions (including wives and children) will have no cause for rivalry, dissension, or personal ambition. Common possessions should mould them into a fraternity and free them from private interests to work for the common good. In this matter of property, the condition of Plato's imagined guardians was not so different from that of Jesus' disciples as recounted in the Book of Acts, or of the monastic orders whose vows include that of voluntary poverty.

Aristotle's criticisms of the arrangements for the guardian class in the *Republic* are largely directed against the community of women and children and the elimination of private property. "Property," he says, "should be in a certain sense common, but as a general rule private; for, when everyone has a distinct interest, men will not complain of one another, and they will make more progress, because everyone will be attending to his own business." He thinks "it is clearly better that property should be private, but the use of it common," in the sense that its use have the common welfare in mind.

Not only does Aristotle defend private property on many counts, but he objects to schemes for equalizing it, such as Plato sets forth in the *Laws*. For one thing, "the legislator ought not only to aim at the equalization of properties, but at moderation in their amount." Yet if the legislator "prescribe this moderate amount equally to all, he will be no nearer the mark; for it is not the possessions but the desires of mankind which need to be equalized, and this is impossible unless a sufficient education is provided by the laws."

Whether or not communism is desirable, there are those who think it is impossible, not so much on the level of the economic, as on the level of the moral, revolution for which Aristotle looks to education. The skeptic thinks human nature cannot be so transformed. It may be only in the twentieth century that the world is divided into two camps on this subject, but the issue is as old as the western tradition. At its beginning Aristophanes expresses the skeptical position in a form that is still current. His *Ecclesiazusae* simply laughs at the idea that inequalities of property can ever be done away with—by law or by education.

OUTLINE OF TOPICS

PAGE

1. The elements of wealth: the distinction between natural and artificial wealth; the distinction between the instruments of production and consumable goods 1052
2. The acquisition and management of wealth in the domestic and tribal community
3. The production of wealth in the political community 1053
 - 3a. Factors in productivity: natural resources, raw materials, labor, tools and machines, capital investments
 - 3b. The use of land: kinds of land or real estate; the general theory of rent
 - 3c. Agricultural production: the produce of land
 - 3d. Industrial production: domestic, guild, and factory systems of manufacturing
4. The exchange of wealth or the circulation of commodities: the processes of commerce or trade 1054
 - 4a. The forms of value: the distinction between use-value and exchange-value
 - 4b. Types of exchange: barter economies and money economies
 - 4c. Rent, profit, wages, interest as the elements of price: the distinction between the real and the nominal price and between the natural and the market price of commodities

- 4d. The source of value: the labor theory of value
- 4e. Causes of the fluctuation of market price: supply and demand
- 4f. The consequences of monopoly and competition
- 4g. Commerce between states: tariffs and bounties, free trade

5. Money

1055

- 5a. The nature of money as a medium or instrument of exchange, and as a measure of equivalents in exchange
- 5b. Monetary standards: the coining or minting of money, good and bad money
- 5c. The price of money: the exchange rate of money as measured in terms of other commodities
- 5d. The institution and function of banks: monetary loans, credit, the financing of capitalistic enterprise
- 5e. The rate of interest on money: the condemnation of usury

6. Capital

1056

- 6a. Comparison of capitalist production with other systems of production: the social utility of capital
- 6b. Theories of the nature, origin, and growth of capital stock: thrift, savings, excesses beyond the needs of consumption, expropriation
- 6c. Types of capital: fixed and circulating, or constant and variable capital
- 6d. Capital profits
 - (1) The distinction of profit from rent, interest, and wages
 - (2) The source of profit: marginal or surplus value, unearned increment and the exploitation of labor
 - (3) Factors determining the variable rate of capital profit
 - (4) The justification of profit: the reward of enterprise and indemnification for risk of losses
- 6e. The recurrence of crises in the capitalist economy: depressions, unemployment, the diminishing rate of profit

7. Property

- 7a. The right of property: the protection of property as the function of government

7b. Kinds of economic property

1057

- (1) Chattel slaves as property
- (2) Property in land
- (3) Property in capital goods and in monetary wealth

7c. The uses of property: for production, consumption, or exchange

7d. The ownership of property: possession or title; the legal regulation of property

- (1) Private ownership: partnerships, joint-stock companies
- (2) Government ownership: eminent domain

1058

7e. The inheritance of property: laws regulating inheritance

8. The distribution of wealth: the problem of poverty	
8a. The sharing of wealth: goods and lands held in common; public ownership of the means of production	
8b. The division of common goods into private property: factors influencing the increase and decrease of private property	
8c. The causes of poverty: competition, incompetence, indigence, expropriation, unemployment; the poverty of the proletariat as dispossessed of the instruments of production	
8d. Laws concerning poverty: the poor laws, the dole	1060
9. Political economy: the nature of the science of economics	
9a. Wealth as an element in the political common good	
9b. Factors determining the prosperity or opulence of states: fluctuations in national prosperity	1061
9c. Diverse economic programs for securing the wealth of nations: the physiocratic, the mercantilist, and the laissez-faire systems	
9d. Governmental regulation of production, trade, or other aspects of economic life	
9e. The economic support of government and the services of government	
(1) The charges of government: the cost of maintaining its services; elements in the national budget	
(2) Methods of defraying the expenses of government: taxation and other forms of levy or impost; confiscations, seizures, and other abuses of taxation	1062
9f. Wealth or property in relation to different forms of government	
9g. Wealth and poverty in relation to crime and to war between states	1063
9h. The struggle of economic classes for political power	
10. The moral aspects of wealth and poverty	1064
10a. The nature of wealth as a good: its place in the order of goods and its relation to happiness	
10b. Natural limits to the acquisition of wealth by individuals: the distinction between necessities and luxuries	1065
10c. Temperance and intemperance with respect to wealth: liberality, magnificence, miserliness, avarice	
10d. The principles of justice with respect to wealth and property: fair wages and prices	1066
10e. The precepts of charity with respect to wealth	1067
(1) Almsgiving to the needy and the impoverished	
(2) The religious vow of poverty: voluntary poverty	1068
(3) The choice between God and Mammon: the love of money as the root of all evil	
11. Economic determinism: the economic interpretation of history	
12. Economic progress: advances with respect to both efficiency and justice	

REFERENCES

To find the passages cited, use the numbers in heavy type which are the volume and page numbers of the passages referred to. For example, in 4 HOMER *Iliad*, BK II [265 283] 12d, the number 4 is the number of the volume in the set, the number 12d indicates that the passage is in section d of page 12.

PAGE SECTIONS. When the text is printed in one column, the letters a and b refer to the upper and lower halves of the page. For example, in 53 JAMES *Psychology*, 116a 119b, the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns, the letters a and b refer to the upper and lower halves of the left-hand side of the page, the letters c and d to the upper and lower halves of the right-hand side of the page. For example, in 7 PLATO *Symposium*, 163b 164c, the passage begins in the lower half of the left-hand side of page 163 and ends in the upper half of the right-hand side of page 164.

AUTHOR'S DIVISIONS. One or more of the main divisions of a work (such as PART, BK, CH, SECT) are sometimes included in the reference line numbers, in brackets, are given in certain cases, e.g., *Iliad*, BK II [265 283] 12d.

BIBLE REFERENCES. The references are to book, chapter, and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses, the King James version is cited first and the Douay indicated by a (D), follows, e.g., OLD TESTAMENT *Nehemiah*, 7 45—(D) *II Esdras*, 7 46.

SYMBOLS. The abbreviation "esp" calls the reader's attention to one or more especially relevant parts of a whole reference. *passim* signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references, see the Explanation of Reference Style, for general guidance in the use of *The Great Ideas*, consult the Preface.

Chapter 100: WILL

INTRODUCTION

THE great controversy over the freedom of the will tends to overshadow the theory of the will itself. For some thinkers the two notions are inseparable. As the word "choice" popularly connotes freedom in choosing between alternatives, so for them liberty belongs to the very nature of the will. But others who affirm that men can act freely or voluntarily also deny that the will itself is ever free.

Still others who distinguish between voluntary and reflex actions—on the part of brute animals as well as men—also distinguish between the voluntary and the free. They reserve freedom to men alone on the ground that men alone have wills. Far from identifying will with free will, they differentiate between those acts of the will which are necessitated and those which are free.

It would appear from this sampling of conflicting opinions that the issue concerning free will presupposes, and often conceals, diverse theories of the will—different conceptions of its nature, its various acts, and its relation to other faculties. Those who affirm and those who deny the will's freedom of action hardly meet on that issue if they proceed from different conceptions of what the will is and how it operates.

The matter is further complicated by different conceptions of freedom. Even those who define will in somewhat similar terms conceive its liberty differently. As the chapter on LIBERTY indicates, freedom has many meanings—*theological, metaphysical, psychological, moral, natural, and civil*. What is called free in one of these senses may not be so regarded in another. But one thing is clear. If, as Hobbes thinks, the only sense in which freedom can be affirmed is that of natural or political liberty—the sense in which a man can *do* what he *wills* without restraint or compulsion—then the will is not free, for its freedom depends on how its own acts are

caused, or how it causes other acts, not on how the acts it causes are affected by outward circumstances beyond its control.

The problem of the freedom of the will seems, therefore, to be primarily psychological and metaphysical. It requires us to consider freedom in terms of *cause* and *necessity*. It appeals to such distinctions as that between the caused, the uncaused, and the self-caused, or to the difference between the predetermined, the contingent, and the spontaneous event. To this extent the problem is metaphysical. But it is psychological insofar as the kind of event with which we are concerned is an interior act of a living thing and, even more specifically, of an intelligent being, a being which has *mind* in some sense of that term. We do not ask whether stones and vegetables have free will because we do not usually suppose that they have will. Even those who, like Aristotle, attribute *desire* to all things or who, like William James, find a striving toward goals in at least all living things, do not refer to volition or the voluntary in the absence of imagination or thought.

The italicized words in the foregoing paragraph indicate ideas which have the most fundamental bearing on the discussion of will, and hence the relation of this to other chapters. The chapters on CAUSE and NECESSITY (and those on FATE and CHANCE) deal with doctrines which both affect and are affected by various theories of the will's freedom. But if we are to postpone the question of free will until the nature of will itself is considered, we must begin with definitions which employ terms discussed in the chapters on MIND and DESIRE.

THE DISTINCTION BETWEEN thought and action sets the stage for the discovery of a factor or faculty which serves to connect them. Acting may follow upon thinking, but not without the

intervention of a determination or a desire to translate thought into deed. Plato, in the *Republic*, divides the soul into three parts, of which one, reason, is the faculty of thought and knowledge, and the other two, spirit and appetite, are principles of action. Both spirit and appetite need to be guided and ruled by reason but, according to Plato, reason depends also upon spirit, for without its support even wisdom must fail to influence conduct. Though he does not use the word, the role he assigns to spirit as the auxiliary of reason corresponds to the function performed by what later writers call "will."

The word 'will' appears in the English translation of Aristotle. It is used less frequently than other words—such as 'wish,' 'choice,' "purpose," 'impulse,' 'appetite,' 'desire'—to designate a motivating force, but along with them it signifies the factor which turns thought into action. Unlike Plato, who separates spirit and appetite, Aristotle makes appetite the generic notion, and treats will and desire as modes of appetite. But sometimes "desire" is used as a synonym for "appetite," and sometimes "wish" or "choice" is substituted for "will."

In his treatise *On the Motion of Animals*, we find Aristotle saying that "the living creature is moved by intellect, purpose, wish and appetite. All these are reducible to mind and desire. For both imagination and sensation have this much in common with mind, that all three are faculties of judgment. However, will, impulse, and appetite are all three forms of desire, while purpose belongs both to intellect and to desire." But in the treatise *On the Soul*, we find him insisting that appetite be considered as the single "faculty of originating local movement," though if the soul were to be divided into a rational and an irrational part, he would assign wish to the calculative or deliberative reason, desire and passion to the irrational part. "Wish," he writes, "is a form of appetite, and when movement is produced according to calculation, it is also according to wish, but appetite can originate movement contrary to calculation, for desire is also a form of appetite."

What is said of purpose and wish is also said of choice. All three somehow combine reason and desire. Giving choice as the cause of specifically human action, and desire combined with

deliberation as the origin of choice, Aristotle speaks of choice as "either desiderative reason or ratiocinative desire." Lacking reason, animals do not have choice, according to Aristotle, or for that matter wish or purpose either, but insofar as their appetites are stirred by sensation or imagination, and the desires aroused lead to action, animals behave voluntarily.

When the words 'desire' and 'appetite' are so used, not to name the generic faculty of originating movement, but to signify a motivation different in kind from wish, purpose, or choice, they correspond to what Aquinas later calls 'animal appetite' or 'sensitive desire.' This is for him the sphere of the emotions or passions. He treats the impulses of fear and anger, for example, as acts of the sensitive appetite.

The kind of desire which, for Aristotle, depends upon practical reason, Aquinas calls 'intellectual appetite' or 'rational desire.' Since 'will' is for him just another name for the desire or appetite which is determined by reason rather than sense, he necessarily holds that irrational animals do not have will.

Aristotle says that the apparent good is the object of appetite, and the real good is the primary object of rational wish. Aquinas distinguishes somewhat differently between the object of the passions and the object of the will. For each sort of appetite or desire, the object takes its special character from the faculty by which it is apprehended. The sensible good, perceived or imagined, stands to the sensitive appetite as the intelligible good, judged by reason, stands to the intellectual appetite or will.

In one place Aristotle differentiates between wish and choice by saying that we can wish for the impossible whereas choice is always of things within our power. But his more usual distinction is in terms of means and ends. "The end is what we wish for," he writes, "the means what we deliberate about and choose." Aquinas also divides the acts of the will according as they concern means or ends, but where Aristotle mentions only choice and wish, Aquinas enumerates three acts of the will with respect to ends (volition, intention, and enjoyment) and three with respect to means (consent, choice, and use).

According to Aquinas, each of these acts of the

will responds to a distinct act of the practical reason and, except for the will's last acts, each may in turn be followed by further practical thought. This progressive determination of the will by reason goes on until the *use* of means leads to action, and action leads to the enjoyment of the end accomplished. As in practical reasoning ends come before means, so for the will the end comes first in the order of intention; but in the order of execution action begins with the means.

LIKE ARISTOTLE AND Aquinas, Kant and Hegel conceive will as a faculty of desire or activity founded upon reason, and so they attribute will, as they attribute reason, to man alone. But both Kant and Hegel go further and almost identify will in its pure state with reason.

"The faculty of desire," writes Kant, "in so far as its inner principle of determination as the ground of its liking or predilection lies in the reason of the subject, constitutes the will"; and he goes on to say that the will, "in so far as it may determine the voluntary act of choice . . . is the practical reason itself." Only man can claim "possession of a will which takes no account of desires and inclinations, and on the contrary conceives action as possible to him, nay, even necessary, which can only be done by disregarding all desires and sensible inclinations."

In this last statement, Kant seems to use the word "desire" in a sense which is opposed to will. The context indicates that he has in mind something like the distinction made by Aquinas between sensitive and rational desire. This indication is confirmed by his own distinction between brute and human choice. "That act which is determinable only by inclination as a sensuous impulse or stimulus would be irrational brute choice (*arbitrium brutum*). The human act of choice, however, as human, though in fact *affected* by such impulses or stimuli, is not *determined* by them; and it is, therefore, not pure in itself when taken apart from the acquired habit of determination by reason." But, according to Kant, the human act of choice can be determined solely by reason. Only then is it "determined to action by the pure will."

One point must be observed, to which we shall subsequently return. The pure will is for

Kant a free will. "The act of choice that is determined by pure reason," he writes, "is the act of free will. . . . The freedom of the act of volitional choice is its independence of being determined by sensuous impulses or stimuli. This forms the negative conception of the free will. The positive conception of freedom is given by the fact that the will is the capability of pure reason to be practical of itself." Insofar as pure reason is able to become practical, that is, to determine choices and direct action, independently of all sensuous impulses or inclinations, that reason is in itself the pure will, and that will is in its very essence free.

For Hegel also, freedom is of the essence of will. "Freedom," he writes, "is just as fundamental a character of the will as weight is of bodies. Heaviness constitutes the body and is the body. The same is the case with freedom and will, since the free entity is the will. Will without freedom is an empty word, while freedom is actual only as will, as subject."

Though the passions enter into the sphere of the subjective will, according to Hegel, will transforms them. "Subjective volition—Passion—is that which sets men in activity, that which effects 'practical' realization." When it is occupied with the passions, the subjective will, Hegel writes, "is dependent and can gratify its desires only within the limits of this dependence." The passions, however, are common to both men and animals. "An animal too has impulses, desires, inclinations," Hegel says, "but it has no will and must obey its impulses if nothing external deters it." Only man, "the wholly undetermined, stands above his impulses and may make them his own, put them into himself as his own. An impulse is something natural, but to put it into my ego depends on my will."

Hegel explains this aspect of the will by reference to that "element of pure indeterminacy or that pure reflection of the ego into itself which involves the dissipation of every restriction and every content either immediately presented by nature, by needs, desires, and impulses, or given and determined by any means whatever." But indeterminacy is only one moment of the will, its negative aspect. The second moment occurs in "the transition from undifferentiated indeterminacy to the differentiation, determination, and positing of a deter-

minacy as a content and object." Both of these moments are partial, each the negation of the other. "The indeterminate will," in Hegel's opinion, is "just as one sided as the will rooted in sheer determinacy. What is properly called the will includes in itself both the preceding moments."

As the unity of both these moments, the will "is particularity reflected into itself and so brought back to universality, *i.e.*, it is individuality. It is," Hegel continues, "the *self-determination* of the ego, which means that it one and the same time the ego posits itself as its own negative, *i.e.*, as restricted and determinate, and yet remains by itself, *i.e.*, in its self identity and universality." While the two previous moments of the will are "through and through abstract and one sided," the third moment gives us the individual will and freedom in the concrete. "Freedom lies neither in indeterminacy nor in determinacy, it is both of these at once. . . . Freedom is to will something determinate, yet in this determinacy to be by oneself and to revert once more to the universal."

IN THE TRADITION OF THE great books, other writers place the essence of the will not in its freedom, but in its being the cause of the voluntary acts performed by animals and men. The students of physiology from Aristotle to William James distinguish the movements of the various bodily organs—the heart, the lungs, the organs of digestion, excretion, and reproduction—from those movements of the whole animal or of its members which are somehow based upon desire and imagination or thought.

Aristotle sometimes calls these physiological changes "non voluntary" and sometimes "involuntary," though he has another meaning for "involuntary" when he describes the conduct of a man, compelled by fear, to do something contrary to his wishes, *e.g.*, the captain who throws his cargo overboard to save his ship. The completely non-voluntary motion is one which occurs quite apart from any *knowledge* of the end, or without conscious desire, whereas the involuntary involves some conflict of desires. When the involuntary in this special sense is not considered, only a twofold division is made, as in James' distinction between reflex and vol-

untary movements, Harvey's distinction between natural and animal motions, or Hobbes' distinction between vital and animal motions.

"There be in animals," Hobbes writes, "two sorts of motions peculiar to them. one called vital . . . such as are the course of the blood, the pulse, the breathing, the concoction, nutrition, excretion, etc., to which motions there needs no help of imagination. The other is *animal motion*, otherwise called *voluntary motion*, as to go to speak, to move any of our limbs, in such manner as is first fancied in our minds. Because going, speaking, and the like voluntary motions, depend always upon a precedent thought of *whether, which way, and what*, it is evident that the imagination is the first internal beginning of all voluntary motion."

But the imagination, according to Hobbes, gives rise to voluntary motions through arousing desire or appetite. When desires and aversions, hopes and fears, alternately succeed one another, what Hobbes means by 'deliberation' takes place, and, he declares, "in deliberation the last appetite or aversion, immediately adhering to the action, or to the omission thereof, is that which we call Will, the act (not the faculty) of willing. And beasts that have deliberation must necessarily also have will. The definition of the will given commonly by the Schools, that it is a *rational appetite*, is not good. For if it were, then could there be no voluntary act against reason. For a voluntary act is that which proceedeth from the will, and no other."

Locke disagrees with Hobbes' view that willing is an act of desire. "That the will is perfectly distinguished from desire," he thinks, may be seen in the fact that desire "may have a quite contrary tendency from that which our wills set us upon." Desire, according to Locke, "is an uneasiness of the mind for want of some absent good", whereas will is the "power to begin or forbear, continue or end, the several actions of our minds, and motions of our bodies, partly by a thought or preference of the mind ordering or, as it were, commanding the doing or not doing, such or such a particular action. . . . The actual exercise of that power, by directing any particular action or its forbearance, is that which we call volition or willing."

Though volition is not an act of desire, Locke holds that it is the uneasiness of desire which

"determines the will to the successive voluntary actions." And though Locke speaks of willing as if it were an act of thought, he distinguishes between the mind's power of understanding and of willing. The one is a passive, the other is an active power. Understanding or perceptivity is "a power to receive ideas or thoughts"; will or motivity is the "power to direct the operative faculties to motion or rest."

In this conception of the will as the power the mind has to control the faculties, or the motions of the body, which can be voluntarily exercised, Locke, like Hobbes before him and William James after, explains the will's action in terms of thinking of the motion to be performed or the deed to be done. Discussing the theory of what he calls "ideo-motor action," James says that "a supply of ideas of the various movements that are possible, left in the memory by experiences of their involuntary performance, is thus the first prerequisite of the voluntary life." Reflexive or other innately determined movements do not depend upon consciousness of the movement to be performed. That is why "voluntary movement must be secondary, not primary functions of our organism"; or as he says in another place, the action which is performed voluntarily "must before that, at least once, have been impulsive or reflex."

The kind of idea which initiates a voluntary movement James calls a "kinaesthetic image"—an image of the sensations which will be experienced when the movement takes place. "In perfectly simple voluntary acts," he writes, "there is nothing else in the mind but the kinaesthetic image, thus defined, of what the act is to be." In certain cases, however, there must be "an additional mental antecedent, in the shape of a fiat, decision, consent, volitional mandate . . . before the movement can follow." This becomes necessary when contrary kinaesthetic images vie with one another to initiate antagonistic movements. "The express fiat, or act of mental consent to the movement, comes in when the neutralization of the antagonistic and inhibitory idea is required.

"With the prevalence, once there as a fact, of the motive idea," James goes on, "the psychology of volition properly stops. The movements which ensue are exclusively physiological

phenomena, following according to physiological laws upon neural events to which the idea corresponds. The *willing* terminates with the prevalence of the idea. . . . We thus find that we reach the heart of our inquiry into volition when we ask by what process it is that the thought of any given object comes to prevail stably in the mind." The answer James gives is that it is "the essential achievement of the will . . . to attend to a difficult object and hold it fast before the mind. The so-doing is the *fiat*. . . . Effort of attention is thus the essential phenomenon of the will."

Though Freud does not use the word "will," or analyze voluntary movements in ideo-motor terms, he does attribute to what he calls "the ego" the function which Locke and James ascribe to will. "In popular language," he writes, "we may say that the ego stands for reason and circumspection, while the id stands for the untamed passions." To the ego is given "the task of representing the external world for the id," and so of protecting it from destructive conflicts with reality.

In discharging this function, "on behalf of the id, the ego controls the path of access to motility, but," Freud continues, "it interpolates between desire and action the procrastinating factor of thought, during which it makes use of the residues of experience stored up in memory. In this way it dethrones the pleasure-principle, which exerts undisputed sway over the processes in the id, and substitutes for it the reality-principle, which promises greater security and greater success."

AS THE PROBLEM OF the will's freedom involves the question of whether or how its acts are caused, so the will's action raises a problem concerning how it causes the voluntary effects it produces. In Locke's view, we are equally at a loss to explain how one body moves another and how our own bodies are moved by our will. "The passing of motion out of one body into another," he thinks, "is as obscure and inconceivable as how our minds move or stop our bodies by thought; which we every moment find that they do."

If we could "explain this and make it intelligible," Locke says in another place, "then the next step would be to understand creation."

Hume agrees that "it must forever escape our most diligent inquiry" how "the motion of our body follows upon the command of our will." That it does, he says, "is a matter of common experience, like other natural events. But the power and energy by which this is effected, like that in other natural events, is unknown and inconceivable."

No less mysterious to Hume is the coming into "existence of an idea, consequent to the command of the will," which seems to imply a "creative power, by which it raises from nothing a new idea, and with a kind of *Fiat*, imitates the omnipotence of its Maker." How "this operation is performed, the power by which it is produced," seems to him "entirely beyond our comprehension."

Spinoza and Descartes take a different view of the relation between the will and the intellect or understanding. Neither admits that the human will forms new ideas, or, as Spinoza says, that there are "mere fancies constructed by the free power of the will." Both conceive the will's activity as consisting in assent or dissent to ideas, their affirmation or negation. But beyond this point they part company.

For one thing, Descartes distinguishes between the will as a faculty of choice and the understanding as a faculty of knowledge, where Spinoza holds that "the will and the intellect are one and the same." Since Spinoza denies that will and intellect are anything except "the individual volitions and ideas themselves," it is more precise, he suggests, to say that the individual volition (*i.e.*, the affirmation or negation of *this* idea) and the individual idea affirmed or denied are one and the same.

In consequence, they differ with respect to the power of volition. Spinoza criticizes the supposition he finds in Descartes, that "the will extends itself more widely than the intellect, and is therefore different from it." Whereas Descartes thinks that "the faculty of comprehension which I possess . . . is of very small extent and extremely limited," Spinoza says, "I am conscious of a will so extended as to be subject to no limits." We can affirm or deny much more than we can know with certitude.

This difference between Spinoza and Descartes reveals itself most strikingly in their conception of God's will. According to Descartes,

the omnipotence of God lies in the supremacy of his will—in its absolute independence even with respect to the divine intellect. "It is self-contradictory that the will of God should not have been from eternity indifferent to all that has come to pass or ever will occur. . . . Thus, to illustrate, God did not will . . . the three angles of a triangle to be equal to two right angles because he knew that they could not be otherwise. On the contrary . . . it is because he willed the three angles of a triangle to be necessarily equal to two right angles that this is true and cannot be otherwise." Against Descartes' voluntarism, Spinoza declares it absurd to say that "God could bring it about that it should not follow from the nature of a triangle that its three angles should be equal to two right angles."

Such different conceptions of the will or of its power necessarily lead to opposite conclusions concerning free will—in man or God. The human mind, according to Spinoza, "cannot be the free cause of its own actions." In each of its volitions, as in each of its ideas, it is determined by a cause. The supposition of an infinite will in God does not exempt that will from the need to be determined in its acts; nor can God "on this account be said to act from freedom of will." Yet Spinoza also affirms that "God alone is a free cause, for God alone exists and acts from the necessity of his own nature." Freedom does not reside in the will, nor in the absence of necessity or causal determination, but rather in self-determination. It does not consist in choice, but in the absence of compulsion by causes which lie outside one's own nature. Hence only an infinite being—a *causa sui* in Spinoza's sense—can be free.

Descartes, on the other hand, places freedom in the will and identifies it with the power of choice. "The faculty of will," he writes, "consists alone in our having the power of choosing to do a thing or choosing not to do it . . . or rather it consists alone in the fact that in order to affirm or deny, pursue or shun, those things placed before us by the understanding, we act so that we are unconscious that any outside force constrains us in so doing." Descartes seems to conceive the will as cause of itself in its acts of choice. But he does not attribute to the human will the autonomy Spinoza ascribes to God. "The knowledge of the understanding," he

writes, "should always precede the determination of the will"; and in another place he says that "our will impels us neither to follow after nor to flee from anything, except as our understanding represents it as good or evil."

In order to be free, Descartes explains, "it is not necessary that I should be indifferent as to the choice of one or the other of two contraries; but contrariwise the more I lean to the one—whether I recognize clearly that the reasons of the good and the true are to be found in it, or whether God so disposes my inward thought—the more freely do I choose and embrace it." The will always retains "the power of directing itself towards one side or the other apart from any determination by the understanding." The human will is, in this sense, always undetermined from without, though it is not always indifferent to the alternatives confronting it. It is indifferent, Descartes holds, only when a man "does not know what is the more true or the better, or at least when he does not see clearly enough to prevent him from doubting about it. Thus the indifference which attaches to human liberty is very different from that which belongs to the divine."

THE DENIAL OF FREE WILL in the tradition of western thought seems to follow from the principle that every happening must have a cause. In the sphere of human conduct, voluntary acts are no less determined effects of prior causes than involuntary acts. Though both are equally necessitated, the difference between the voluntary and the involuntary, according to Hobbes, Locke, and Hume, consists in the fact that when a man acts voluntarily, he does what he himself has decided to do.

The fact that his decision to act in a certain way is itself caused, does not, in the opinion of these writers, abolish the freedom of his action, but only the freedom of his will. If freedom is attributed not to a man's will, but to the man who can do what he wills, then, these writers think, there is no conflict between freedom and necessity—or between freedom and the universal reign of causality. For them freedom is abridged only by external forces which coerce a man to act contrary to his wishes or constrain him from acting as he wills. Freedom in this sense is incompatible only with exterior com-

pulsion, not with the inner causal determination of every act of the will.

To those who deny free will, it does not seem to be an entirely satisfactory answer to say, as Descartes does, that we are immediately conscious of our freedom of choice. In the Third Set of Objections, urged by Thomas Hobbes against Descartes, Objection XII (which is directed against Meditation IV wherein Descartes discusses free will) contains this statement: "We must note here also that the freedom of the will has been assumed without proof, and in opposition to the opinion of the Calvinists." In replying, Descartes merely repeats his original statement of the evidence for free will.

"I made no assumption concerning freedom," he writes, "which is not a matter of universal experience. Though there are many who, looking to the divine foreordination, cannot conceive how that is compatible with liberty on our part, nevertheless no one, when he considers himself alone, fails to experience that to will and to be free are the same thing (or rather that there is no difference between what is voluntary and what is free)." To Gassendi who, in another set of objections, also denies "the indeterminateness of the will," Descartes replies: "These matters are such that anyone ought to experience them in himself rather than be convinced of them by ratiocination. . . . Refuse then to be free, if freedom does not please you; I at least shall rejoice in my liberty, since I experience it in myself, and you have assailed it not with proof but with bare negations merely."

The experience of free will is no proof either, the opponents reply, for the experience is open to the suspicion that it is illusory rather than real. It may be, Hume suggest, only "a false sensation or seeming experience which we have . . . of liberty or indifference in many of our actions." We suffer this illusion, even foist it upon ourselves, he further suggests, because we are motivated by "the fantastical desire of shewing liberty." In the same vein, Freud later discounts objections to the determinism of psychoanalysis on the part of those who refuse to recognize the hidden causes which control their actions. "You have an illusion of a psychic freedom within you which you do not want to give up," he says. But this "deeply rooted belief in psychic freedom and choice" must be given up

because it "is quite unscientific. . . . It must give way before the claims of a determinism which governs even mental life."

THE DILEMMA OF FREE WILL or determinism does not seem to other writers to be so easily resolvable. "All theory is against the freedom of the will," says Dr. Johnson; "all experience for it." Tolstoy states the dilemma in similar terms. "Regarding man as a subject of observation" by the rational methods of the sciences, Tolstoy writes, "we find a general law of necessity to which he (like all that exists) is subject. But regarding him from within ourselves as what we are conscious of, we feel ourselves to be free. This consciousness is a source of self-cognition quite apart from and independent of reason. Through his reason man observes himself, but only through consciousness does he know himself. . . . You say: I am not free. But I have lifted my hand and let it fall. Everyone understands that this illogical reply is an irrefutable demonstration of freedom. That reply is the expression of a consciousness that is not subject to reason."

The problem cannot be solved, Tolstoy thinks, by ignoring one side of the question. To do that is to put the problem "on a level on which the question itself cannot exist. In our time," Tolstoy continues, "the majority of so-called advanced people—that is, the crowd of ignoramuses—have taken the work of the naturalists who deal with one side of the question for a solution of the whole problem." But to admit that "from the point of view of reason man is subject to the law of necessity . . . does not advance by a hair's breadth the solution of the question, which has another, opposite, side, based on the consciousness of freedom." Not only does this "unshakable, irrefutable consciousness of freedom, uncontrolled by experiment or argument" constitute for Tolstoy "the other side of the question," but it is also for him that "without which no conception of man is possible."

William James takes a somewhat different view of the dilemma of free will or determinism. Conceiving the act of free will in terms of the exertion of an effort on our part which is not determined by its object, James is willing to admit that our consciousness of freedom may be a

delusion. "Even in effortless volition we have the consciousness of the alternative being also possible. This is surely a delusion here," he writes; "why is it not a delusion everywhere?" Hence it seems to him that "the question of free will is insoluble on strictly psychological grounds."

But if the existence of free will cannot be proved from experience, neither, in his opinion, can determinism be scientifically demonstrated. "The most that any argument can do for determinism," he says, "is to make it a clear and seductive conception, which a man is foolish not to espouse, so long as he stands by the great scientific postulate that the world must be one unbroken fact, and that prediction of all things without exception must be ideally, if not actually, possible." For those who accept this postulate, "a little fact like effort can form no real exception to the overwhelming reign of deterministic law."

Yet it remains a postulate, and postulation is not proof. Furthermore, there is "a *moral* postulate about the Universe . . . which would lead one to espouse the contrary view . . . the postulate that *what ought to be can be, and that bad acts cannot be fated, but that good ones must be possible in their place.*" As scientific law and prediction seem to call for the postulate of determinism, so moral responsibility and the genuineness of moral options seem to demand free will.

Hume recognizes that "it may be said . . . that, if voluntary actions be subjected to the same laws of necessity with the operations of matter, there is a continued chain of necessary causes, pre-ordained, and pre-determined, reaching from the original cause of all to every single volition of every human creature." But he does not think that the assertion of "no contingency anywhere in the universe; no indifference; no liberty," requires us to give up our notions of moral responsibility, and to abstain from making judgments of praise or blame concerning human actions. "The mind of man is so formed by nature," he writes, "that, upon the appearance of certain characters, dispositions, and actions, it immediately feels the sentiment of approbation or blame. The characters which engage our approbation are chiefly such as contribute to the peace and security of human society; as the characters which excite blame are

chiefly such as tend to public detriment and disturbance."

In Hume's opinion, "remote and uncertain speculations" concerning the causation of human character or conduct, or concerning the general structure of the universe, do not affect "the sentiments which arise from the natural and immediate view of the objects. . . . Why should not the acknowledgement of a real distinction between vice and virtue," he asks, "be reconcilable to all speculative systems of philosophy, as well as that of a real distinction between personal beauty and deformity?" James takes the exactly opposite view. A doctrine of necessity or determinism is for him incompatible with moral responsibility, or with the distinction between virtue and vice. Holding that free will is indispensable to the moral life, James chooses "the alternative of freedom." In doing so he confesses that "the grounds of his opinion are ethical rather than psychological."

He does go one step further into what he calls "the logic of the question." Since postulation is not proof—since a postulate is not an undeniable axiom but an expression of what James elsewhere calls "the will to believe"—the kind of dilemma which is formed by conflicting postulates can be resolved only by the exercise of free choice. The alternatives of free will and determinism constitute that kind of dilemma for James, and so it seems to him quite proper that the first act of free will should be to believe in free will.

"When scientific and moral postulates war thus with each other," he writes, "and objective proof is not to be had, the only course is voluntary choice, for skepticism itself, if systematic, is also voluntary choice." Hence belief in free will "should be voluntarily chosen from amongst other possible beliefs. Freedom's first deed should be to affirm itself. We ought never to hope for any other method of getting at the truth if indeterminism be a fact. Doubt of this particular truth will therefore probably be open to us to the end of time, and the utmost that a believer in free will can *ever* do will be to show that the deterministic arguments are not coercive. That they are seductive," James concludes, "I am the last to deny; nor do I deny that effort may be needed to keep the faith in freedom, when they press upon it, upright in the mind."

IN THE TRADITION OF THE great books, not all who affirm free will think that to do so requires them to deny the universal reign of causality in nature; nor do they base their affirmation on our immediate consciousness of free choice or make it an act of faith—a pragmatic postulate. Kant, for example, explicitly disclaims that freedom is a matter of faith. "It is the only one of all the ideas of pure reason," he says, "whose object is a matter of fact." This means for him that its objective reality can be proved. In contrast, "the existence of God and the immortality of the soul are matters of faith," by which Kant means that they must be postulated by the practical reason as conditions necessary for the conceivability of the *summum bonum* which the moral law commands us to seek.

In order to understand Kant's proof of freedom, it is necessary to remember that he conceives the freedom of the will in terms of its autonomy, and its autonomy in terms of the fact that the practical reason, with which the pure will is identical, legislates for itself in proclaiming, and obeys only itself in upholding, the moral law. "Autonomy of the will," he writes, "is that property of it by which it is a law unto itself. . . . Now the idea of freedom is inseparably connected with the conception of *autonomy*, and this again with the universal principle of morality." The moral law, Kant goes on, "expresses nothing else than the *autonomy* of the pure practical reason," and "this *self-legislation* of the pure and, therefore, practical reason is freedom in the positive sense."

In saying that "a free will and a will subject to moral laws are one and the same," Kant thinks that he may be suspected of circular reasoning, in that he appears to make freedom a condition of morality and at the same time to infer freedom from the existence of the moral law. There is no question that for him freedom "must be the foundation of all moral laws and the consequent responsibility." But, he explains, no inconsistency results from calling "freedom the condition of the moral law" and also maintaining that "the moral law is the condition under which we can first *become conscious* of freedom," if it be understood that "freedom is the *ratio essendi* [ground of being] of the moral law, while the moral law is the *ratio cognoscendi* [ground of knowing] of freedom."

We know that our will is free from knowing the existence of the moral law. We know that the moral law exists, for otherwise reason could never judge, as it does, that we ought to have done what we did not do. It is not freedom but the moral law "of which we become directly conscious (as soon as we trace for ourselves maxims of the will)." This, Kant says, "first presents itself to us, and leads directly to the concept of freedom." Whenever a man judges that "he can do a certain thing because he is conscious that he ought," then, according to Kant, "he recognizes that he is free, a fact which but for the moral law he would never have known."

The freedom which Kant thinks can be directly deduced from the moral law is a very special kind of causality. In the sensible world of nature, each cause is in turn the effect of some prior cause. None is the first or unconditioned cause, an uncaused cause. But for Kant freedom is "a faculty of absolute spontaneity" and consists in "the unconditioned causality of the cause—a causality capable of producing effects independently of and even in opposition to the power of natural causes, and capable, consequently, of *spontaneously* originating a series of events."

How are these two modes of causality—which Kant calls "the causality of *nature* and of *freedom*"—compatible with one another? To affirm both would appear to get us into the antinomy in which the thesis that "causality according to the laws of nature is not the only causality . . . a causality of freedom is also necessary," is contradicted by the antithesis that "there is no such thing as freedom, but everything in the world happens solely according to the laws of nature." Yet Kant thinks he can show that "this antinomy is based upon a mere illusion, and that nature and freedom are at least *not opposed*."

It would be impossible, he admits, "to escape this contradiction if the thinking subject, which seems to itself free, conceived itself in *the same sense* or in *the very same relation* when it calls itself free as when in respect to the same action it assumes itself to be subject to the laws of nature." But the contradiction is only apparent or illusory if man belongs to two worlds—the sensible world of natural phenomena and the supersensible world of intelligible beings or nou-

mena. "The notion of a being that has free will," writes Kant, "is the notion of a *causa noumenon*"—of a cause which does not operate under the temporal conditions of natural causality. "The notion of causality as *physical necessity* . . . concerns only the existence of things so far as it is determinable *in time* and, consequently, as phenomena, in opposition to their causality as things in themselves."

To remove "the apparent contradiction between freedom and the mechanism of nature in one and the same action, we must remember . . . that the necessity of nature, which cannot co-exist with the freedom of the subject, appertains only to the attributes of the thing that is subject to time conditions, consequently only to those of the acting subject as a phenomenon."

But the very same subject," Kant continues, "being on the other side conscious of himself as a thing in himself, considers his existence also *in so far as it is not subject to time conditions*, and regards himself as only determinable by laws which he gives himself through reason."

In the latter mode of supersensible existence, man exercises the causality of a free will. He is not in any way subject to the natural necessity which governs all physical things. Yet the two worlds—the moral world of freedom and the physical world of necessity—meet in the same act. "The rational being," Kant explains, "can justly say of every unlawful action that he performs, that he could very well have left it undone, although as appearance it is sufficiently determined in the past, and in this respect is absolutely necessary."

THE APPARENT CONFLICT BETWEEN freedom and nature arises for Kant because he conceives the act of free will to be absolutely spontaneous. It is as uncaused as the swerve of the atoms (discussed in the chapter on CHANCE) on which Lucretius bases the existence of free will. There is another conception of freedom that does not attribute to free will any special character which brings it into conflict with ordinary causality. It does not belong to liberty, Aquinas thinks, that "what is free should be the first cause of itself." Not only is God the ultimate cause of what a man freely chooses to do, as He is the first cause of every natural event, but the will as a natural faculty of man never moves itself to

operation. It is always moved by the reason, even in its acts of choice, and so these acts, wherein the will is free, are also caused.

Where Kant identifies will with free will (which implies that the will is free in all its acts), Aquinas distinguishes between those acts of the will which are necessitated and those which are free. He quotes Augustine to the effect that "natural necessity does not take away the liberty of the will," for that liberty exists only in the will's choice of means, not in its volition of the end. "Just as the intellect naturally and of necessity adheres to first principles," Aquinas explains, "so the will adheres to the last end." And just as the intellect assents of necessity to those "propositions which have a necessary connection with first principles, namely, demonstrable conclusions," so the will adheres of necessity only to those things "which have a necessary connection with happiness." With regard to all else - the whole realm of particular goods which are merely contingent means - the will is not necessitated, and so its choice among them is free.

Although Aquinas says that unless man has free choice, "counsels, exhortations, commands, prohibitions, rewards and punishments would be in vain," he does not postulate free will as an indispensable condition of moral conduct. Rather he shows how reason in causing the will's choices at the same time leaves them free. "The root of liberty," he writes, "is the will as the subject thereof, but it is the reason as its cause. For the will can tend freely towards various objects precisely because the reason can have various perceptions of good." When, for example, "the deliberating reason is indifferently disposed to opposite things, the will can be inclined to either." The freedom of the will's choice with respect to particular means thus lies in the fact that, with respect to all contingent matters, "the judgment of reason may follow opposite courses, and is not determinate to one."

"In all particular goods," Aquinas writes, "the reason can consider an aspect of some good and the lack of some good, which has the aspect of evil; and in this respect it can apprehend any single one of such goods as something to be chosen or to be avoided. The perfect good alone, which is happiness, cannot be apprehend-

ed by reason as an evil, or lacking in any way. Consequently man wills happiness of necessity, nor can he will not to be happy, or to be unhappy. Now since choice is not of the end, but of the means, it is not of the perfect good, which is happiness, but of particular goods. Therefore, man chooses not of necessity, but freely."

Like Aquinas, Locke holds that "to be determined by our own judgment is no restraint to liberty." But where Locke thinks the "constant determination to a pursuit of happiness, no abridgment of liberty," Aquinas holds that because "man wills happiness of necessity," his will is not free in the volition of its natural end. Yet Locke does mention the case "wherein a man is at liberty in respect of willing" - the case in which "a man may suspend the act of his choice from being determined for or against the thing proposed, till he has examined whether it be really of a nature in itself and consequences to make him happy or not."

In this type of case Aquinas locates what is peculiar to the causality of freedom. Sometimes the judgment of reason is determined by its object, as when it contemplates the final end of actions. But when it deliberates about alternative means (which are both particular and contingent), reason can judge either way. What determines it to judge this way rather than that? Aquinas' answer is that such judgments of the reason are voluntary, in contrast to reason's involuntary assent to self-evident truths, wherein it is determined entirely by the object being considered. But if a voluntary judgment is one in which the will determines the reason's assent, and if reason's judgments concerning means are voluntary in this sense, then the act of the reason which causes the will's act of choice is itself an act caused by the will. The will's choice is, therefore, not uncaused; but, as Aquinas conceives it, the way in which it is caused makes it self-determining, and to this extent free.

THE GENERAL THEORY of the will figures most prominently in the theology of Aquinas and in the philosophy of Kant and Hegel. They not only present the most elaborate analyses of its nature and its relation to reason but, in the tradition of the great books, they are the most stalwart defenders of its freedom. Their differ-

ences in principle and in reasoning may, however, obscure the common ground they share.

This may be seen in their conception of freedom. Aquinas does not attribute autonomy or spontaneity to the will. Yet in his view of free choice as a self-determining act of the will, there is something analogous to Kant's autonomy, and where Kant makes the pure will essentially free and spontaneous, Aquinas holds that the will, with respect to willing or not willing, is always free and inviolable. It is absolutely within "the power of the will," he writes, "not to act and not to will." He does not try to explain such freedom of exercise in the same way as freedom of choice.

It is only with regard to the latter that Aquinas appeals to the causal reciprocity between reason and will to show how the will's act of choice can be both free and caused. The kind of causation which Aquinas thinks takes place in free choice—the will determining the reason to make the practical judgment by which it is itself determined—seems to involve a circularity, or perhaps simultaneity, in action and reaction. If this is possible only because reason and will are *spiritual* powers, then here too there is some likeness to Kant's theory of the will's action as belonging to the supersensible world rather than to the domain of physical movement.

On one other point, they tend to agree even more plainly. "Free choice," writes Aquinas, "is part of man's dignity." Man's dignity for Kant—his membership in what Kant calls "the kingdom of ends"—is "rendered possible by the freedom of the will." But though they share this opinion of the source of human dignity in

rationality and freedom, they do not draw the same moral consequences from their affirmation of free will as pivotal in human life.

Aquinas, like Aristotle, does not find moral goodness only in the will. On the contrary, the rectitude of the will depends on the goodness of the end it adheres to and the means it chooses. But like the Stoics, Kant makes the will the sole repository of moral goodness.

As Epictetus says that all good and evil lie in man's will, and that the morally neutral sphere is "in the region outside the will's control," so Kant begins his moral philosophy with the statement, "Nothing can possibly be conceived in the world, or even out of it, which can be called good without qualification, except a Good Will." In his view, "a good will is good not because of what it performs or effects, not by its aptness for the attainment of some proposed end, but simply by virtue of the volition, that is, it is good in itself." In another place he adds that "though not indeed the sole and complete good," the will, *good in itself*, must be the supreme good and the condition of every other, even of the desire of happiness.

These fundamental issues concerning the will in moral philosophy are more fully treated in the chapter on *DUTY*. The problems of the will in political theory are considered in the chapters on *LAW* and *STATE*—especially those problems which involve the concept of the sovereign will and the distinction of the particular will and the general will, the majority will and the will of all. The strictly theological problems concerning God's freedom and man's freedom in relation to God's will are also reserved for treatment elsewhere.

OUTLINE OF TOPICS

	PAGE
1. The existence and nature of will, its relation to reason or mind and to desire or emotion	1085
2. The analysis of the power and acts of the will	1086
2a. The objects of the will: the scope of its power	
2b. The motivation of the will	
(1) The rational determination of the will's acts by judgments concerning good and evil or by the moral law	1087
(2) The sensitive determination of the will's acts by estimations of benefit and harm, or pleasure and pain: the impulsion of the passions	

2c. The acts of the will

- (1) The classification and order of the will's acts: means and ends
- (2) The several acts of the will with respect to ends: their antecedents and consequences
- (3) The several acts of the will with respect to means: their antecedents and consequences

3. The functioning of will in human conduct and thought

3a. The role of the will in behavior

- (1) The distinction between the voluntary and the involuntary: the conditions of voluntariness; comparison of men and animals with respect to voluntary behavior
- (2) The range of purposive conduct: the relation of habit and instinct to the voluntary

3b. The role of the will in thought

- (1) The distinction between knowledge and opinion in relation to the willful in thought: the will to believe and wishful thinking
- (2) The will as cause of error
- (3) Religious faith as dependent on an act of will or practical reason

4. The divine will

4a. The relation of the divine will and intellect

4b. The freedom of the divine will: the divine will in relation to the possible and the impossible

5. The freedom of the will

5a. Interpretations of the meaning of free will

- (1) The freedom of the will as consisting in a freely determined choice or a free judgment of the reason
- (2) The freedom of the will as consisting in the freedom of a man to act or not to act: freedom from external constraints or coercions
- (3) The freedom of the will as consisting in a totally uncaused or spontaneous act
- (4) The freedom of the will as the autonomy of the reason legislating for itself: the identity of pure will and free will

5b. Arguments for the freedom of the will

- (1) Man's immediate consciousness of his freedom of choice: reason's reflexive knowledge of its autonomy
- (2) The freedom of the will as deriving from the indetermination of practical reason judging particular goods
- (3) The deduction of free will from the moral law or from the fact of pure practical reason
- (4) Free will as a pragmatic option: the postulation of free will as an indispensable condition of moral responsibility and action

5c. Arguments against the freedom of the will: free will as a violation of the course of nature or the reign of causality; the impossibility of proving free will

6. The analysis of the will's range of freedom	
6a. The limitations on the freedom of the will: the distinction between acts of the will which are necessitated and acts of the will which are free	
6b. The distinction between the will's freedom of exercise and the will's freedom of choice	
6c. The distinction between voluntary behavior and behavior resulting from free choice: comparison of men and animals with respect to freedom	
7. The implications of free will	1094
7a. Free will as a source of human dignity: its relation to slavery and civil liberty	
7b. The factors of freedom and necessity in the philosophy of history	
7c. Human freedom in relation to the will of God: fate, predestination, and providence	
7d. God as the object of the human will: the quiescence of the will in the beatific vision	1095
7e. Free will in relation to sin and salvation	1096
(1) The freedom to sin: Adam's freedom and the freedom of fallen human nature	
(2) The relation of freedom to grace	
8. The will as a factor in morality and in society	1097
8a. The inviolability of the will: its freedom from external compulsions or constraints	
8b. The goodness or malice of the will	
(1) The conditions of the will's rectitude or disorder	
(2) A good will as the exclusive or principal human good	1098
8c. The will and virtue: justice and charity as habits of the will	
8d. The will and duty: the categorical imperative	
8e. The will and right: the harmony of individual wills in external practical relations	
9. Differences among men in the sphere of will	
9a. The distinction between men of strong and weak will: cultivation of will power	
9b. The pathology of the will: indecision, obsession, compulsion, inhibition	1099
10. Will as a term in political theory	
10a. The sovereign will: the will of the people; the will of the majority	
10b. The relation of law to will	
10c. The general will, particular wills, the will of each, and the will of all	1100

REFERENCES

To find the passages cited, use the numbers in heavy type, which are the volume and page numbers of the passages referred to. For example, in 4 HOMER: *Iliad*, BK II [265 283] 12d, the number 4 is the number of the volume in the set; the number 12d indicates that the passage is in section d of page 12.

PAGE SECTIONS: When the text is printed in one column, the letters a and b refer to the upper and lower halves of the page. For example, in 53 JAMES: *Psychology*, 116a 119b, the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns, the letters a and b refer to the upper and lower halves of the left-hand side of the page, the letters c and d to the upper and lower halves of the right-hand side of the page. For example, in 7 PLATO: *Symposium*, 163b 164c, the passage begins in the lower half of the left-hand side of page 163 and ends in the upper half of the right-hand side of page 164.

AUTHOR'S DIVISIONS: One or more of the main divisions of a work (such as PART, BK, CH, SECT) are sometimes included in the reference; line numbers, in brackets, are given in certain cases; e.g., *Iliad*, BK II [265 283] 12d.

BIBLE REFERENCES: The references are to book, chapter, and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses, the King James version is cited first and the Douay, indicated by a (D), follows; e.g., OLD TESTAMENT: *Nehemiah*, 7:45 -(D) *II Esdras*, 7:46.

SYMBOLS: The abbreviation "esp" calls the reader's attention to one or more especially relevant parts of a whole reference; "passim" signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references, see the Explanation of Reference Style; for general guidance in the use of *The Great Ideas*, consult the Preface.

Chapter 101: WISDOM

INTRODUCTION

THE special character of wisdom among the attainments of the mind shows itself in the things which everyone will agree can be said about wisdom—things which cannot be said about art and science, or knowledge and learning generally. We believe that, with the centuries, knowledge can be steadily increased and learning advanced, but we do not suppose that the same progress can be achieved in wisdom. The individual may grow in wisdom. The race does not seem to.

In the tradition of the great books, the moderns usually assert their superiority over the ancients in all the arts and sciences. They seldom claim superiority in wisdom. The phrase "modern science" needs no elucidation, but if anyone were to speak of modern wisdom, he would have to explain his meaning. As "modern" seems to have an immediately acceptable significance when it qualifies "science," so "ancient" seems to go with "wisdom," and to suggest that, with the centuries, far from increasing, wisdom may be lost.

Wisdom is more frequently and extensively the subject of discussion in the ancient and mediaeval than in the modern books. The ancients seem to have not only a greater yearning for wisdom, but also a greater interest in understanding what wisdom is and how it can be gained. The traditional discussion of wisdom, furthermore, has its foundations in the literature of the Old and the New Testament, as well as in the books of pagan antiquity.

This is not true of other forms of knowledge. The teachings of revealed religion open a path to the "heart of wisdom." They do not propose methods of scientific research. Again and again the Scriptures proclaim that "fear of the Lord is the beginning of wisdom"—a wisdom which develops with piety and worship, as science develops with experiment and proof.

Still another distinctive mark of wisdom is that it cannot be misused. We recognize that bad men as well as good may possess other kinds of knowledge. We have seen artistic skill and scientific truth put to evil use. But we do not ordinarily think a man wise unless he acts wisely. To act wisely is to act well, even as to have wisdom is to use it. The satirist's praise of folly condemns a useless wisdom. The theologian's condemnation of "worldly wisdom" dismisses it as the worst of folly—a counterfeit of wisdom.

Other forms of learning may separate knowledge from action, wisdom tends to unite them. Other forms of inquiry may be content with knowing and understanding the facts, the pursuit of wisdom aspires to a knowledge of good and evil. Plato, for example, makes the vision of the good the goal of a dialectic which ascends to wisdom, yet which does not rest there, but returns enlightened to the realm of action. This conception of wisdom is hinted at whenever we refrain from calling a man wise simply because he is learned—a scholar, scientist, or philosopher.

Again it is Plato who respects wisdom so highly that he will not call the philosopher wise, but only a lover of wisdom. "No god is a philosopher or seeker after wisdom, for he is wise already," Socrates says in the *Symposium*, "nor does any man who is wise seek after wisdom. Neither do the ignorant seek after wisdom." The lovers of wisdom are neither the wise nor the ignorant and foolish. As Socrates points out, they are "in a mean between the wise and the ignorant."

Aristotle would seem to disagree, not from a lower regard for wisdom, but because he identifies wisdom with philosophical knowledge, and especially with that highest branch of speculative science which is called "theology," "first philosophy," or "metaphysics." His use

of the phrase "philosophical wisdom" to distinguish speculative from practical or political wisdom suggests that the philosopher may attain the wisdom he pursues. Yet Aristotle, like Plato, speaks of "philosophers or lovers of wisdom"; and Plato, like Aristotle, treats wisdom as one of the basic human virtues.

WE SHALL RETURN TO THE distinction which both Aristotle and Aquinas make between practical and speculative wisdom; they often call the latter simply "wisdom," in contrast to "prudence," which is their name for practical wisdom. Other writers, who treat wisdom as one, sometimes emphasize its speculative, and sometimes its practical, aspect. But for all of them, this double aspect remains part of wisdom's special character.

Lucretius, for example, finds nothing "more gladdening than to dwell in the calm high places, firmly embattled on the heights by the teaching of the wise, whence you can look down on others, and see them wandering hither and thither, going astray as they seek the way of life." The way of life, free from pain, the distress of fear, and futile struggle, is known only to the wise. Calm and repose are here suggested as attributes of the wise man. That also seems to be the implication of Dr. Johnson's "approbation of one who had attained to the state of the philosophical wise man, that is, to have no want of anything." When Boswell observes that then "the savage is a wise man," Johnson retorts: "Sir, I do not mean simply being without—but not having a want."

For Plotinus, wisdom seems to be purely speculative, and its repose a condition of the reasoning mind at rest. "Wisdom," he writes, "is a condition in a being that possesses repose. Think what happens when one has accomplished the reasoning process; as soon as we have discovered the right course, we cease to reason. We rest because we have come to wisdom." Still wisdom has a moral or, for Plotinus, an aesthetic aspect. "One Soul," he says, is "wise and lovely, another foolish and ugly. Soul-beauty is constituted by wisdom."

The practical or moral aspect of wisdom predominates in Milton, Rabelais, and Tolstoy. In *Paradise Lost*, Adam communicates his reflections on human knowledge to Raphael.

But apte the Mind or Fancie is to roave
Uncheckt, and of her roaving is no end;
Till warn'd, or by experience taught, she learn
That not to know at large of things remote
From use, obscure and subtle, but to know
That which before us lies in daily life,
Is the prime Wisdom; what is more, is fume,
Or emptiness, or fond impertinence,
And renders us in things that most concerne
Unpractis'd, unprepar'd, and still to seek.

Gargantua, writing a letter to his son Pantagruel while the latter is a student in Paris, admonishes him in the words of Solomon that "Wisdom entereth not into a malicious mind, and that knowledge without conscience is but the ruin of the soul." In *War and Peace*, Pierre, after reiterating that "All we can know is that we know nothing. And that's the height of human wisdom," learns from the Mason that "the highest wisdom is not founded on reason alone, nor on those worldly sciences of physics, chemistry, and the like, into which intellectual knowledge is divided." The highest wisdom, the Mason continues, is "but one science—the science of the whole—the science explaining the whole creation and man's place in it. To receive that science it is necessary to purify and renew one's inner self. . . . And to attain this end, we have the light called conscience that God has implanted in our souls."

Though Plato defines wisdom as the virtue of reason—that part of the soul which is for him the faculty of knowledge—he gives it the function of directing conduct as well as contemplating truth. "Him we call wise," Socrates declares in the *Republic*, "who has in him that little part which rules" and which has "a knowledge of what is for the interest of each of the three parts and of the whole." In the state as in the soul, "how can there be the least shadow of wisdom," the Athenian Stranger asks in the *Laws*, "where there is no harmony?"

There is no harmony or wisdom "when fair reasonings have their habitation in the soul, and yet do no good, but rather the reverse of good" because reason fails to rule or be obeyed. "When the soul is opposed to knowledge, or opinion, or reason, which are her natural lords," the Athenian Stranger goes on, "that I call folly, just as it is in the state, when the multitude refuses to obey their rulers or the laws."

The four virtues which Plato enumerates

in both the *Republic* and the *Laws* are wisdom, temperance, courage, justice. Justice is given a certain preeminence in the *Republic* as somehow embracing the other three, but in the *Laws*, the ruling virtue is wisdom. Calling the virtues "divine goods" to distinguish them from such things as health, beauty, strength, and wealth, the Athenian Stranger makes wisdom "chief and leader of the divine class of goods. . . . Next," he says, "follows temperance; and from the union of these two with courage springs justice, and fourth in the scale of virtue is courage." As the principle of these other virtues, wisdom like them engages in the life of action. It does not move solely in the realm of thought.

WHEN HE REFERS TO WISDOM as one of the four virtues, Aristotle uses the word "wisdom" as if it named a single virtue. In the passage in the *Politics* in which he says that "the courage, justice, and wisdom of a state have the same form and nature as the qualities which give the individual who possesses them the name of just, wise or temperate," he does not divide wisdom into the speculative and the practical. But he seldom overlooks that separation. The passage just cited, for instance, begins with the statement that "each one has just so much happiness as he has of virtue and wisdom, and of virtuous and wise action."

Here the reference to virtue *and* wisdom places wisdom outside the virtues, when the latter are conceived exclusively as *moral* virtues. Wisdom for Aristotle is a virtue only in the order of intellectual excellence, not of moral excellence or character. As an intellectual virtue, wisdom is not even involved in the growth or exercise of the moral virtues. It is as possible, Aquinas says, following Aristotle, to have the cardinal moral virtues without wisdom, as it is to have them without art or science. But for both Aquinas and Aristotle this is neither true nor intelligible unless we bear in mind the distinction between philosophical and practical wisdom, or between wisdom and prudence.

Though prudence is, no less than wisdom, an intellectual virtue—a quality of mind rather than of character—it belongs with the moral virtues. As the chapter on VIRTUE indicates, the cardinal virtues according to Aquinas in-

clude prudence, not wisdom. Similarly, as may be seen in the chapter on PRUDENCE, Aristotle's theory holds it impossible to be good "without practical wisdom," just as it is impossible to be "practically wise without moral virtue."

Practical wisdom, Aristotle writes, "is concerned with things human and things about which it is possible to deliberate." Philosophic wisdom, on the other hand, "will contemplate none of the things that make a man happy." To explain the difference, Aristotle uses the example of the early Greek sages. "We say Anaxagoras, Thales, and men like them have philosophic but not practical wisdom, when we see them ignorant of what is to their own advantage. . . . They know things that are remarkable, admirable, difficult, and divine, but useless; *viz.*, because it is not human goods they seek."

If "wisdom" connotes the highest form of knowledge, then the name, according to Aristotle, is more properly applied to speculative than to practical wisdom. The highest form of knowledge, in his view, is concerned with the highest objects. Hence, he says, "it would be strange to think that . . . practical wisdom is the best knowledge, ~~since~~ man is not the best thing in the world. . . . But if the argument be that man is the best of the animals, this makes no difference; for there are other things much more divine in their nature than man," and wisdom is knowledge "of the things that are highest by nature."

When Hobbes distinguishes between prudence and sapience, he does not assign a special object to wisdom. "As much experience is *Prudence*," he writes, "so is much science, *Sapience*." It is the amount of science a man possesses, not his possession of a particular kind of knowledge, which makes him wise. Descartes seems to take a similar view when he says that "the sciences taken all together are identical with human wisdom." But for Aristotle and Aquinas, philosophical wisdom can be differentiated from the other speculative virtues, such as the understanding of first principles or the scientific knowledge of the conclusions which can be demonstrated from them. It involves them, but it is distinct from them insofar as it uses principles to demonstrate conclusions concerning the highest causes. Wisdom can be

called a science if it is understood that by reason of its object it stands at the apex of the sciences, crowning and perfecting them.

In the opening pages of his *Metaphysics*, Aristotle identifies wisdom with the supreme philosophical science--the science which investigates first principles and causes. He calls it a "divine science" or "theology," for, as he says, "God is thought to be among the causes of all things and to be a first principle." It is not the most useful science, but the most "desirable on its own account and for the sake of knowing. . . . It alone exists for its own sake. . . . All the sciences, indeed, are more necessary than this, but none is better."

While adopting Aristotle's conception of wisdom, Aquinas finds it most eminently represented among the sciences, not by metaphysics or the theology of the philosophers, but by sacred doctrine or the theology based on revelation. "Since it is the part of a wise man to order and to judge," he writes, "and since lesser matters can be judged in the light of some higher cause . . . therefore, he who considers absolutely the highest cause of the whole universe, namely God, is most of all called wise. . . . But sacred doctrine essentially treats of God viewed as the highest cause, for it treats of Him not only so far as He can be known through creatures just as the philosophers know Him . . . but also so far as He is known to Himself alone and revealed to others. Hence," Aquinas concludes, "sacred doctrine is especially called wisdom."

THE CONTRAST BETWEEN THE wisdom of the philosopher and the wisdom of the theologian is more fully discussed in the chapters on METAPHYSICS and THEOLOGY. But we are concerned here with the further implications of the difference between natural and supernatural wisdom, or the wisdom of man and of God.

The Greeks insistently raise the question whether man can have wisdom. In the *Apology*, Socrates tells his accusers that his "cross-examination of the pretenders to wisdom" was a duty imposed upon him by the oracle which declared that there was no man wiser than himself. To understand the oracle's meaning, he tried to seek out wisdom in other men but, he says at his trial, "I found that the men most in repute

were all but the most foolish." This gave him an insight into the kind of wisdom which he himself possessed.

"My hearers always imagine," Socrates declares, "that I myself possess the wisdom which I find wanting in others; but the truth is, O men of Athens, that God only is wise; and by his answer he intends to show that the wisdom of men is worth little or nothing; he is not speaking of Socrates, he is only using my name by way of illustration, as if he said, He, O men, is the wisest, who, like Socrates, knows that his wisdom is in truth worth nothing." Again in the *Phaedrus*, Socrates refuses to call any man wise, "for that is a great name which belongs to God alone." For men, "lovers of wisdom or philosophers is the modest and befitting title."

Aristotle also says of the science which most deserves the name of wisdom, because it is a science of divine things, that "such a science either God alone can have, or God above all others." He does not think that the divine power can be jealous, but if there were any truth in what the poets say about the jealousy of the gods, "it would probably occur in this case above all, and all who excelled in this knowledge would be unfortunate." To whatever extent the possession of wisdom "might be justly regarded as beyond human power," it would be unfitting, in Aristotle's opinion, "for man not to be content to seek the knowledge that is suited to him."

This is even more typically a Christian than a pagan sentiment. "Christians have a special knowledge," writes Montaigne, "how natural and original an evil curiosity is in man: the thirst of knowledge, and the desire to become more wise, was the first ruin of human kind, and the way by which it precipitated itself in eternal damnation." In *Paradise Lost*, as he is about to leave the Garden of Eden, Adam says to the angel Michael:

Greatly instructed I shall hence depart.
Greatly in peace of thought, and have my fill
Of knowledge, what this vessel can contain;
Beyond which was my folly to aspire.

To which the angel replies:

This having learnt, thou hast attained the summe
Of wisdom . . .

But Sacred Scripture does more than enjoin man to humble himself before the chasm be-

tween human wisdom at its best and the infinite wisdom of God. It does more than say in the words of Jeremiah: "Let not the wise man glory in his wisdom," for it also says that "fools despise wisdom." In the Epistle of James we find true wisdom set apart from false. If the knowledge of the wise man is not accompanied by the "meekness of wisdom," if instead there is "bitter envying and strife in your hearts," then "this wisdom descendeth not from above, but is earthly, sensual, devilish. . . . But the wisdom that is from above is first pure, then peaceable, gentle, and easy to be intreated, full of mercy and good fruits, without partiality, and without hypocrisy."

St. Paul asks: "Hath not God made foolish the wisdom of this world? When

. . . the world by wisdom knew not God, it pleased God by the foolishness of preaching to save them that believe.

For the Jews require a sign, and the Greeks seek after wisdom:

But we preach Christ crucified, unto the Jews a stumbling-block, and unto the Greeks foolishness;

But unto them which are called both Jews and Greeks, Christ the power of God, and the wisdom of God.

Because the foolishness of God is wiser than men; and the weakness of God is stronger than men.

"My speech and my preaching," St. Paul continues to the Corinthians,

. . . was not with enticing words of man's wisdom, but in demonstration of the Spirit and of power:

That your faith should not stand in the wisdom of men, but in the power of God.

Howbeit we speak wisdom among them that are perfect; yet not the wisdom of this world, nor of the princes of this world, that come to nought:

But we speak the wisdom of God in a mystery, even the hidden mystery, which God ordained before the world unto our glory.

Wonder is the beginning of the kind of natural wisdom which a philosopher like Aristotle regards as the ultimate goal of human inquiry. But the supernatural wisdom of which Scripture speaks begins with the fear of God and comes to man not through his efforts at learning, but only as a divine gift. "If any of you lack wisdom," St. James declares, "let him ask God, that giveth to all men liberally and upbraideth not; and it shall be given him." It is wrong for a man to take pride in his own learn-

ing but, according to Pascal, "the proper place for pride is in wisdom, for it cannot be granted to a man that he has made himself wise. . . . God alone gives wisdom, and that is why *Qui gloria-tur, in Domino gloriatur.*"

The theologians dwell at length on the text of the Psalmist that "the fear of the Lord is the beginning of wisdom." Enumerating seven steps to wisdom, Augustine writes: "First of all, it is necessary that we should be led by the *fear of God* to seek the knowledge of His will, what He commands us to desire and what to avoid. Now this fear will of necessity excite in us the thought of our mortality and of the death that is before us, and crucify all the motions of pride as if our flesh were nailed to the tree." Then in succession come the steps of piety, knowledge, resolution, counsel, purification of heart; and, finally, the "holy man will be so single and so pure in heart that he will not step aside from the truth, either for the sake of pleasing men or with a view to avoid any of the annoyances which beset this life. Such a man ascends to *wisdom*, which is the seventh and the last step, and which he enjoys in peace and tranquility."

Only the wisdom which begins with faith, according to Aquinas, also begins with fear. "A thing may be called the beginning of wisdom in two ways," he explains; "in one way, because it is the beginning of wisdom itself as to its essence; in another way, as to its effect. Thus the beginning of an art as to its essence consists in the principles from which that art proceeds, while the beginning of an art as to its effect is that wherefrom it begins to operate." Aquinas then points out that wisdom is considered by theologians "in one way, and in another way by philosophers." As the wisdom of the philosophers does not begin with articles of faith but with axioms of reason, so it does not begin with fear but with wonder.

The wisdom of the philosophers and the wisdom of the religious both consist in knowledge of divine things, but "wisdom, as we look at it," Aquinas writes, "is considered not only as being cognizant of God, as it is with the philosophers, but also as directing human conduct, since this is directed not only by the human law, but by the divine law. . . . Accordingly the beginning of wisdom as to its essence consists in the first principles of wisdom, *i.e.*, the articles of faith,

and in this sense faith is said to be the beginning of wisdom. But as regards the effect, the beginning of wisdom is the point where wisdom begins to work, and in this way fear is the beginning of wisdom, yet servile fear in one way and filial fear in another.

"For servile fear," Aquinas explains, "is like a principle disposing a man to wisdom from without, in so far as he refrains from sin through fear of punishment, and is thus fashioned for the effect of wisdom. . . . On the other hand, chaste or filial fear is the beginning of wisdom, as being the first effect of wisdom. For since the regulation of human conduct by the divine law belongs to wisdom, in order to make a beginning, man must first of all fear God and submit himself to Him."

The special character of wisdom which we noted earlier—that it is at once speculative and practical knowledge, that it is concerned both with the ultimate nature of things and the ultimate good for man—seems to be strikingly exemplified in what the theologian calls "the gift of wisdom." Wisdom as Plato conceives it may have this double character, but for Aristotle, as we have seen, wisdom, as opposed to prudence, is purely speculative. It remains speculative even when it deals with the end which is the good of each thing "and in general with the supreme good in the whole of nature." It considers the end or the good, as Aristotle indicates, only under the aspect of investigating "the first principles and causes; for the good, *i.e.*, the end, is one of the causes." It does not thereby direct man to his own end, or lay down the rules of a good life.

The supernatural gift of wisdom, Aquinas tells us, "is not merely speculative but also practical. . . . It belongs to wisdom as a gift, not only to contemplate divine things, but also to regulate human acts." Such infused wisdom not only extends "to the hidden mysteries of divine things," which are beyond the greatest wisdom man can acquire by his natural efforts, but this wisdom also directs man's actions to "the sovereign good which is the last end, by knowing which man is said to be truly wise."

CHRISTIAN THEOLOGIAN LIKE Augustine and Aquinas do not hold the wisdom of the philosophers in contempt because they fail to pene-

trate the divine mysteries, or to guide man to his salvation. Augustine finds in Plato's teaching a marvellous foreshadowing of Christian wisdom. "It is evident that none come nearer to us than the Platonists," he says, when he attributes to Plato the conception of "the wise man as one who imitates, knows, loves this God, and who is rendered blessed through fellowship with Him in His own blessedness." Though Aquinas holds that "wisdom as a gift is more excellent than wisdom as an intellectual virtue, since it attains to God more intimately by a kind of union of the soul with Him," he certainly regards Aristotle as the epitome of natural wisdom when he refers to him as "*the philosopher*."

The admonition of St. Paul, "to beware lest any man spoil you through philosophy and vain deceit, after the tradition of men, after the rudiments of the world," does not seem to be interpreted by Augustine and Aquinas to mean, as Montaigne later suggests, that "the plague of man is the opinion of wisdom; and for this reason it is that ignorance is so recommended to us by our religion." But the theologians do condemn the counterfeits of wisdom to which men are susceptible. These are false wisdoms; the wisdom of the philosophers is not false, but imperfect.

We find three types of false worldly wisdom listed by Aquinas. If a man "fixes his end in external earthly things," he writes, "his wisdom is called *earthly*; if in the goods of the body, it is called *sensual* wisdom; if in some excellence, it is called *devilish* wisdom, because it imitates the devil's pride." These worldly wisdoms constitute for him the sin of folly. "It is the wisdom of the world," Aquinas says, "which deceives and makes us foolish in God's sight. . . . Though no man wishes to be a fool," he adds, "yet he wishes those things of which folly is a consequence, *viz.* to withdraw his sense from spiritual things and to plunge it into earthly things." The essence of such folly, according to the Psalmist, lies in denial: "The fool hath said in his heart, There is no God."

But there is another meaning of folly, in which it is neither a sin nor the opposite of wisdom. "If any man among you seem to be wise in this world," St. Paul declares, "let him become a fool, that he may be wise." Commenting on this text, Aquinas explains that "just as there

is an evil wisdom called *worldly wisdom* . . . so too there is a good folly opposed to this evil wisdom, whereby man despises worldly things." If there is wisdom in such folly, so also, according to Aquinas, there can be wisdom in those whom the world regards as natural fools or innocents. If they have grace, he writes, "baptized idiots, like little children, have the habit of wisdom, which is a gift of the Holy Ghost, but they have not the act, on account of the bodily impediment which hinders the use of reason in them."

Throughout the tradition of the great books those who praise folly do not take exception to the Psalmist's remark that only "fools despise wisdom." Rather they find wisdom in the appearances of folly, and use the wisdom of fools to expose the folly of those who pretend to be wise. "I every day hear fools say things that are not foolish," Montaigne declares; and echoing him, Touchstone, the clown in *As You Like It*, complains: "The more pity that fools may not speak wisely what wise men do foolishly." To which Celia replies: "By my troth, thou sayest true; for, since the little wit that fools have was silenced, the little foolery that wise men have makes a great show." And later, after a conversation with Touchstone about the passing of time, Jacques observes: "When I did hear the motley fool thus moral on the time, my lungs began to crow like chanticleer that fools should be so deep contemplative."

The jesters and clowns in Shakespeare's comedies have a kind of wisdom. In *Twelfth Night*, the clown who banters with Viola denies that he is the Lady Olivia's fool, but says he is simply "her corrupter of words." The trouble, he explains, is not that he lacks reason, but that "words are grown so false that I am loath to prove reason with them"; and he ends by telling Viola: "Foolery, sir, does walk about the orb like the sun; it shines everywhere. I would be sorry, sir, but the fool should be as oft with your master as with my mistress. I think I saw your wisdom there."

Pantagruel persuades Panurge to take counsel of a fool. "The wise may be instructed by a fool," he says. "You know how by the advice and counsel and prediction of fools, many kings, princes, states, and commonwealths have been preserved, battles gained, and diverse doubts of

a most perplexed intricacy resolved." As he who "is called a worldly wise man," Pantagruel goes on to remark, may "in the second judgment of the intelligences which are above . . . be esteemed a fool," so he may be thought a sage who lays "quite aside those cares which are conducive to his body or his fortunes. . . . All which neglects of sublunary things are vulgarly imputed folly."

To the same general effect are Pierre's reflections in *War and Peace* on the period of his blissful insanity after the burning of Moscow. When he recalls the views he formed of men and circumstances at the time of his madness, he always finds them correct. "I may have appeared strange and queer then," he says to himself, "but I was not so mad as I seemed. On the contrary, I was wiser and had more insight than at any other time, and understood all that is worth understanding in life, because . . . because I was happy."

FOLLY IS NOT ALWAYS PRAISED in paradox, nor is it seriously condemned only by the Christian theologian who equates it with denying or turning away from God. "Folly, eldest of Jove's daughters," says Agamemnon in the *Iliad*, "shuts men's eyes to their destruction. She walks delicately, not on the solid earth, but hovers over the heads of men to make them stumble or to ensnare them. Time was when she fooled Jove himself." Agamemnon concludes the story of Jove's befuddlement by relating how in his rage Jove "caught Folly by the hair and swore a great oath that never should she again invade starry heaven and Olympus, for she was the bane of all. Then he whirled her round with a twist of his hand, and flung her down from heaven so that she fell on the fields of mortal men."

On the earthly plane, folly takes many forms, of which, in Montaigne's judgment, the most exasperating are dullness of wit, the boldness of stupidity, and contentiousness in argument. "Obstinacy of opinion and heat in argument are the surest proofs of folly," he observes. "Is there anything so assured, resolute, disdainful, contemplative, serious, and grave as the ass?"

Whatever the forms or aspects of folly, and however the wisdom it implies or opposes be conceived, one thing is clear throughout the

tradition of western thought. No one who can separate true wisdom from folly in disguise places anything but the highest value on it in the order of human goods.

The final utterance of the Chorus in *Antigone*, that "wisdom is the supreme part of happiness"; the Aristotelian doctrine that "the activity of philosophic wisdom is admittedly the pleasantest of virtuous activities" and "all the other attributes ascribed to the supremely happy man are evidently those connected with this activity"; the statement by Plato in his *Seventh Letter*, in which he demands that his myth of the philosopher-king be taken seriously, for "the human race will not see better days until either the stock of those who rightly and genuinely follow philosophy acquire political authority, or else the class who have political control be led by some dispensation of providence to become real philosophers"—all these express the tribute which pagan antiquity pays to wisdom in human life and society.

To the Christian—theologian, mystic, or poet—it is in Heaven with the saints who dwell in God's presence that wisdom, like love, reigns supreme. Nor are these two unconnected. As

charity is the perfection of the will, so wisdom is the perfection of the intellect. In the *Divine Comedy*, Aquinas explains to Dante when they meet in Paradise how lack of wisdom's order in the mind goes hand in hand with love's disorder. "He is very low down among the fools," the spirit says, "who affirms or denies without distinction, alike in the one and in the other case: because it happens that oftentimes the rash judgment bends in false directions, and then self-love binds the intelligence."

With the accent on earth rather than on heaven, with reliance upon reason rather than upon faith, Spinoza voices a comparable insight that to have wisdom is to love wisely, for to know wisely is to love God. "It is therefore most profitable to us in this life," he writes, "to make perfect the intellect or reason as far as possible, and in this one thing consists the highest happiness or blessedness of man; for blessedness is nothing but the peace of mind which springs from the intuitive knowledge of God." Not only does "the highest possible peace of mind" arise from this kind of knowledge but, he adds, from it also "necessarily springs the intellectual love of God."

OUTLINE OF TOPICS

	PAGE
1. The nature, origins, and kinds of wisdom	1110
1a. Diverse conceptions of natural wisdom: the supreme form of human knowledge	
1b. The distinction between speculative and practical wisdom, or between philosophical and political wisdom	1111
1c. Theological and mystical wisdom: the supernatural wisdom of faith and vision; the gift of wisdom	
1d. The wisdom of God: the defect of human wisdom compared with divine wisdom; the folly or vanity of worldly wisdom	
2. Wisdom, virtue, and happiness	1112
2a. Wisdom as an intellectual virtue: its relation to other intellectual virtues, especially science and understanding; the vice or sin of folly	
2b. Wisdom and man's knowledge of good and evil: the relation of wisdom to the moral virtues	1113
2c. Wisdom as a good: its role in the happy life; the place of the wise man in society	1114
3. The love of wisdom and the steps to wisdom: the sophist, the philosopher, and the wise man	1115
4. The praise of folly: the wisdom of fools and innocents	1116

REFERENCES

To find the passages cited, use the numbers in heavy type, which are the volume and page numbers of the passages referred to. For example, in 4 HOMER *Iliad*, BK II [265-283] 12d, the number 4 is the number of the volume in the set; the number 12d indicates that the passage is in section d of page 12.

PAGE SECTIONS: When the text is printed in one column, the letters a and b refer to the upper and lower halves of the page. For example, in 53 JAMES *Psychology*, 116a-119b, the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns, the letters a and b refer to the upper and lower halves of the left-hand side of the page, the letters c and d to the upper and lower halves of the right-hand side of the page. For example, in 7 PLATO *Symposium*, 163b-164c, the passage begins in the lower half of the left-hand side of page 163 and ends in the upper half of the right-hand side of page 164.

AUTHOR'S DIVISIONS One or more of the main divisions of a work (such as PART, BK, CH, SECT) are sometimes included in the reference, line numbers, in brackets, are given in certain cases, e.g., *Iliad*, BK II [265-283] 12d.

BIBLE REFERENCES: The references are to book, chapter, and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses, the King James version is cited first and the Douay, indicated by a (D), follows, e.g., OLD TESTAMENT *Nehemiah*, 7:45—(D) II *Esdras*, 7:46.

SYMBOLS The abbreviation "esp" calls the reader's attention to one or more especially relevant parts of a whole reference, "passim" signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references, see the Explanation of Reference Style, for general guidance in the use of *The Great Ideas*, consult the Preface.

1. The nature, origins, and kinds of wisdom

1a. Diverse conceptions of natural wisdom: the supreme form of human knowledge

- 7 PLATO *Charmides*, 7d 9d, 11b c, 12d 13d / *Phaedrus*, 125a 126c / *Symposium*, 166c 167c / *Apology*, 201b-203a / *Phaedo*, 232a / *Republic*, BK IV, 346a-347a; BK VI-VII, 383d-398c / *Timaeus*, 476a b / *Parmenides*, 491c d / *Sophist*, 571a-c / *Philebus*, 634b-635b / *Laws*, BK III, 670b-c / *Seventh Letter*, 809c-810d
- 8 ARISTOTLE *Physics*, BK I, CH 9 [192^a33^b 2] 268c d; BK II, CH 2 [194^b9 15] 271a; CH 7 [198^a22 31] 275b c / *Heavens*, BK III, CH I [298^b13-24] 390a b / *Metaphysics*, BK I, CH I-2 499a-501c, BK II, CH I 511b, d 512b, BK III, CH I [995^a23^b 27] 513b, d 514b, CH 2 [996^a18-997^a34] 514d 516a; BK IV, CH I-3 522a-525a; BK VI, CH I 547b, d-548c; BK XI, CH I-4 587a-590a; CH 7 592b-593a / *Soul*, BK I, CH I [403^b10-17] 632d

Chapter 102: WORLD

INTRODUCTION

HE who does not know what the world is," writes Marcus Aurelius, "does not know where he is. And he who does not know for what purpose the world exists, does not know who he is, nor what the world is." According to the Stoic emperor, for whom "there is one universe made up of all things, and one God who pervades all things," man has only to exercise the divine spark of reason in himself in order to be at home in a world which reason rules.

He does not hesitate long before the dilemma that "it is either a well-arranged universe or a chaos huddled together." In the belief that it is through and through an orderly world—a cosmos rather than a chaos, governed by providence rather than by chance—Aurelius is willing to assume whatever place destiny allots him in the universal scheme. "Everything harmonizes with me," he says, "which is harmonious to thee, O Universe."

With a Christian's faith in God's plan and providence, Montaigne is also willing to conceive the universe as the stage on which man acts his destined part. But suppose, Montaigne adds, that we consider "man alone, without foreign assistance, armed only with his own proper arms, and unfurnished with the divine grace and wisdom, which is all his honor, strength, and the foundation of his being." How then does the world appear? Is it, in all its vastness, the human habitat—the home of man, its lord and master?

Man deceives himself, Montaigne thinks, if he thus pictures the world in terms of his own reason and knowledge. What could lead him to believe, he asks, that "this admirable movement of the celestial arch, the eternal light of those planets and stars that roll so proudly over his head, the fearful motions of that infinite ocean, were established, and continue so many ages,

for his service and convenience? Can anything be imagined so ridiculous as that this miserable and wretched creature, who is not so much as master of himself . . . should call himself master and emperor of the world?"

If, as Montaigne thinks he should, man "feels and sees himself lodged here in the dirt and filth of the world, nailed and riveted to the worst and deadest part of the universe, in the lowest story of the house, and most remote from the heavenly arch," how absurd for him to imagine himself "above the circle of the moon and bringing heaven under his feet." Except "by the vanity of the same imagination" by which "he equals himself to God," how can he regard himself as occupying an exalted position in the universe?

Deprived of the religious faith that he is made in God's image and that all the rest of the visible universe is made for him, only presumption or conceit can save man from being dwarfed by the world. But science robs man of such conceit, according to Freud. The cosmology that "is associated in our minds with the name of Copernicus" displaces man and shrinks him. Humanity cannot hold on to "its naive self-love," Freud writes, when it realizes that the earth is "not the center of the universe, but only a tiny speck in a world-system of a magnitude hardly conceivable."

NOT ONLY IN THE REFLECTIONS of Aurelius, Montaigne, and Freud, but throughout the tradition of the great books, the conception of the world or universe is inseparable from the ideas of God and man. These three ideas always interpenetrate each other, though the resulting pattern of thought varies according to the direction in which thought moves from any one of the three to the other two.

Sometimes the whole universe lies on one

side of the infinite distance between the Creator and His creation, and man has a special place of honor in the hierarchy of beings which constitutes the order of the created world. Though man is greater than the earth he treads or the skies he watches, the whole world is less than God, Who has made it out of nothing and Who, in the freedom of His act of creation, is unaffected by the world's coming to be or passing away. On this view, taken by Christian theologians, God is not part of the world, the world is not part of God, nor is there any whole which embraces both; and if "world" means the physical totality, then man belongs both to this world and to another—the realm of spiritual creatures which is also part of the created universe.

Sometimes "world" means the all-embracing universe, uncreated and co-eternal with the divinity which dwells in it, a thing of soul as well as body, including mind as well as matter. Whether God is the prime mover of the universe; the transcendent One from which emanates in all degrees of being the multiplicity of intelligible and sensible things; the infinite substance which exceeds the sum of all the finite things that exist only as its modifications; or the Absolute Spirit which manifests itself historically in both physical and psychical nature—on any of these views cosmology merges with theology, as in the theories of Aristotle, Plotinus, Spinoza, and Hegel. For Spinoza and Hegel, as for the Stoics, to know the world is to know God. Its order or structure is more than divinely instituted. It is the indwelling divinity itself.

Such views of the world tend, for the most part, to look upon the individual man as a microcosm mirroring the macrocosm. The world's body and soul, its matter and mind, are there to be seen in miniature. Considering the philosophers who assert that "mind is the king of heaven and earth," Socrates suggests in the *Philebus* that "in reality they are magnifying themselves." Nevertheless, the doctrine of a world-soul animating the body of the universe is repeatedly proposed in the dialogues of Plato as a way of understanding man; and that mad or at least cryptic Platonist, Captain Ahab, gazing on the gold doubloon he has nailed to the mast as a reward for sighting Moby Dick, observes in

soliloquy that "this round gold is but the image of the rounder globe, which, like a magician's glass, to each and every man in turn but mirrors back his own mysterious self."

A third alternative remains. Sometimes, as with Lucretius and later philosophers of a materialist cast, the world is all there is and all there is of it can be reduced to atoms and the void. It is thrown together by blind chance rather than designed by a presiding intelligence. The universe obeys no laws except the laws of its own matter in motion. "Rid of its haughty lords," nature, according to Lucretius, is "seen to do all things spontaneously of herself without the meddling of the gods." For their own happiness, Lucretius exiles his papier-mâché gods to the interspaces where they "lead a life without care." But man is not so fortunate.

In a world that is not made for him, and in which, godless, he must be entirely self-reliant, man is burdened with heavy cares. Since he is one of nature's progeny, he may not be wholly alien in this world of material forces; but neither is he, like a beloved son, assured of nature's hospitality. The dominant note here is that of man *against* the world; and in this unequal struggle science alone gives him the sense—or perhaps the illusion—that at least in his little corner of the world his mind may dominate. Yet from time to time defeat reminds him that the world remains unruly. Bridle its matter and harness its energies as he will, he holds no check-rein to prevent his being overthrown.

AS THE CHAPTER ON NATURE indicates, the word "nature" in one of its meanings seems to be synonymous with "world." This fact, as well as the various ways in which "world" has been used in the foregoing discussion, requires us to note a certain ambiguity. When we speak of the world, our meaning may range from the earth or globe which man inhabits to the solar system in which our planet revolves and beyond that to the whole physical universe, however far-flung. We also use "world" to signify an entire realm of things which is distinctively set apart from another order of existence, as when we speak of material and spiritual worlds, or when we refer to the world of thought or the world of sense. Such phrases as "world government" and "world peace" use "world" in a political sense

which evokes the image of the whole order of human society upon this globe.

We shall restrict ourselves in this chapter to that sense of "world" in which it signifies the object of cosmological speculations and controversies. We are concerned with the idea of the universe or cosmos. As we have already observed, the universe may be quite differently conceived according to the way in which it is related to God, but it is almost always conceived as that totality in which man and his earth and solar system exist, and outside of which nothing can exist except God. According to the theologians, the angelic hierarchies are no exception, for they fall within the created universe. But philosophers like Plato and Plotinus, who identify the world with the physical universe, set apart from it the eternal ideas or the order of the pure intelligences.

The traditional issues concerning the world or universe, so understood, can be summarized by three basic questions: Are there many worlds or is there only one? What is the structure of the world? Does the world have a beginning and does it have an end?

The first of these questions seems to violate the meaning of "world" as *the* universe—the complete totality of things. How can there be more than one *all*? But that difficulty, as we shall see, may be avoided by the hypothesis of a plurality of worlds succeeding one another in infinite time. It may even be met by the supposition that the infinity of space permits the possibility of two or more coexistent but unrelated worlds. Considerations of the time and space of the world, amplified in the chapters on SPACE and TIME, have a bearing on this issue of one or many worlds.

The second question presupposes agreement that the world has a structure, for if it does not, no problem arises concerning what that structure is. Such agreement is present in the tradition, and is unaffected by the dispute over the role of chance or design in the world's production, and by the controversy concerning the world's creation. As Harvey points out, the Greek word "cosmos" connotes order and beauty. Its opposite is chaos.

Writers may disagree about an original chaos prior to the formation of the cosmos. Plato, for example, refers to a time when the elements

"were all without reason and measure"—"before they were arranged so as to form a universe." Milton also writes of a time when "yet this world was not, and *Chaos* wilde reign'd where these Heav'ns now rowl." In the "dark illimitable Ocean without bound"—before "the Heav'ns and Earth rose out of *Chaos*"—"eldest Night and *Chaos*, Ancestors of Nature, held eternal *Anarchie*." In contrast, Aristotle maintains that "chaos or Night did not exist for an infinite time" prior to the world, and he argues against "the theologians who generate the world from Night."

But these differences of opinion leave the main point unaffected. The world is a cosmos, not a chaos. The universe has some order. Even those who doubt the perfection of its order, or who point out how it is marred by evil and irrationality, affirm an order or structure, according to which the universe hangs together and is in some degree intelligible to man. The disputed question of the world's structure, therefore, centers on what the structure is. What precisely is the principle or pattern of cosmic coherence? By what image or analogy shall man try to hold the world before his mind as if it were a single intelligible object?

This problem, as well as the issue concerning one or many worlds, cannot be completely discussed apart from the last of the three questions—the question of the world's beginning and end. For example, if world follows world in succession, each must have a beginning and an end. So, too, the world's structure takes on a different aspect for those who affirm and those who deny its creation by a divine intelligence; and according to at least one view of the order in the universe, men are persuaded that it must be made or ruled by reason, and argue against its being the result of chance.

But the question of the world's beginning, must not be confused with the issue of creation, or the problem of the world's relation to God. Aquinas may agree with Berkeley's criticism of "the ancient philosophers who maintained the being of a God," while holding "Matter to be uncreated and co-eternal with Him"; but he does not wholly agree with Hobbes that "to say the world was not Created, but Eternal (seeing that which is Eternal has no cause), is to deny there is a God." For Aquinas, to deny cre-

ation is to deny God, but whether the created world ever began to be is a question for faith, not reason. Nor does the denial of creation necessarily imply the eternity of the world—at least not in the sense in which Lucretius imagines the world to have both a beginning and an end.

TWO GREAT EXPONENTS of atomism in the tradition of the great books—Lucretius and Newton—show us that agreement on some of the basic questions of cosmology does not preclude disagreement on others. Both conceive the world as built of indestructible atomic particles. They conceive its structure to be determined by the motions of its parts, both large and small, through the forces exerted by body upon body. Both, furthermore, favor the hypothesis of a plurality of worlds, but only Lucretius holds that this world had a chance beginning and will come to a similar end.

When Lucretius refers to the infinite universe, which, "bounded in no direction . . . spreads out free from limit," he does not mean this world in which man now lives. He means the void in which our world as well as other worlds are formed out of the infinite number of atoms which, combining and separating, cause the birth and death of worlds. "In no wise can it be deemed probable," he writes, "when space yawns illimitable towards all points, and seeds in number numberless and sum unfathomable fly about in manifold ways driven on in ceaseless motion, that this single earth and heaven have been brought into being, that those bodies of matter so many in number do nothing outside them."

The existence of other worlds than this seems probable to him, not only because of the infinity of the universe in respect to its space and matter, but also because the atoms form each world "without purpose, without foresight, without result." As chance produced this world, so it can produce others. Hence, Lucretius argues, "you must admit that there are elsewhere other combinations of matter like to this which ether holds in its greedy grasp. . . . You must admit that in other parts of space there are other earths and various races of men and kinds of wild beasts. Moreover in the sum of all there is no one thing which is begotten

single in its kind." On this principle, he thinks, "you must admit that earth and sun, moon, sea, and all things else . . . are not single in their kind, but rather in number past numbering."

By calling the atoms eternal bodies and first-beginnings, Lucretius indicates that it is each particular world, not the universe of matter and the void, which has a beginning and an end. The atoms or first-beginnings "fall into arrangements such as those out of which this, our sum of things, has been formed," he explains, "not by design . . . but because many in number and shifting about in many ways throughout the universe they are driven and tormented by blows during infinite time past." Thus a world is born, and so even does it grow by the addition of bodies from without. But as a world is born and grows, it also decays and dies. "Many bodies ebb away and withdraw from things," Lucretius writes, "but still more must join them, until they have touched the utmost point of growth. Then piece by piece age breaks their powers and matured strength, and wastes away on the side of decay," until finally "in this way even the walls of the wide world all around will be stormed and fall to decay and crumbling ruin."

According to Newton, the atoms are indestructible but not eternal bodies. Upon their indestructibility or permanence depends the uniform and enduring texture of nature in all ages. "That Nature may be lasting," Newton says, "the changes of corporeal things are to be placed only in the various separations and new associations and motions of these permanent particles." But for Newton the indivisibility of the ultimate particles of matter does not preclude their being created. "It seems probable to me," he writes, "that God in the beginning formed matter in solid, massy, hard, impenetrable movable particles, of such size and figures, and with such other properties . . . as most conduced to the end for which he formed them."

Not through the chance colligation of atoms, but through their being "variously associated in the first creation by the counsel of an intelligent agent," is the world formed. "For it became him who created them to set them in order. And if he did so," Newton adds, "it's unphilosophical to seek for any other origin of the

world, or to pretend that it might arise out of a chaos by the mere laws of nature; though being once formed, it may continue by those laws through many ages."

Newton differs from Lucretius in these particulars, but shares his view of the probability of many worlds. "Since space is divisible *in infinitum*, and matter is not necessarily in all places, it may also be allowed," Newton declares, "that God is able to create particles of matter of several sizes and figures, and in several proportions to space . . . and thereby to vary the laws of nature, and make worlds of several sorts in several parts of the universe. At least," he continues, "I see nothing of contradiction in all this."

OTHER WRITERS SEEM TO FIND a plurality of worlds repugnant to reason, if not flatly contradictory. Plato, for example, appears to think that the possibility of other worlds is inconsistent with the perfection of this one—certainly if this world is made in the image of the eternal ideas. Because "the original of the universe contains in itself all intelligible beings," Plato's *Timaeus* argues that there cannot be many worlds, but "one only, if the created copy is to accord with the original." It belongs to the world's perfection to be solitary, and for this reason, *Timaeus* explains, "the creator made not two worlds or an infinite number of them; but there is and ever will be one only-begotten and created heaven."

Aristotle reasons differently to the conclusion that "there cannot be more worlds than one." The conclusion follows in his view from the impossibility of an infinity of body or matter, and with it an infinity of space. "The universe is certainly a particular and a material thing," he writes. "If it is composed not of a part but of the whole of matter, then though the being of 'universe' and of 'this universe' are still distinct, yet there is no other universe, and no possibility of others being made, because all the matter is already included in this." He thinks it a tenable hypothesis that "the world as a whole includes *all* its appropriate matter"; hence, he concludes, "neither are there now, nor have there ever been, nor can there ever be formed, more heavens than one, but this heaven of ours is one and unique and complete."

On theological grounds, Augustine challenges those who suppose "either that this is not the only world, but that there are numberless worlds, or that indeed it is the only one, but that it dies, and is born again at fixed intervals, and this times without number." On theological grounds also, though with a different conception of God and the universe, Spinoza maintains that "besides God no substance can be or be conceived"; that "God is one, which is to say, in nature there is but one substance, and it is absolutely infinite"; that all finite things have their existence in the one infinite substance of God; and that God is "not only the cause of the commencement of their existence, but also of their continuance in existence." Because God's liberty consists, in Spinoza's conception, in acting according to the necessity of His own nature, not in freedom of will, he insists that "things could be produced by God in no other way and in no other order than that in which they have been produced." This is not merely the only actual but the only possible world.

Aquinas agrees that there is only one actual world. "The very order of things created by God," he writes, "shows the unity of the world." Since "whatever things come from God have relations of order to each other and to God himself . . . it is necessary that all things should belong to one world. Therefore," Aquinas continues, "only those were able to assert the existence of many worlds who do not acknowledge any ordaining wisdom, but rather believed in chance; as did Democritus, who said that this world, besides an infinite number of other worlds, was made by a coming together of atoms."

Aquinas places God's liberty in freedom of choice, and so he contemplates the possibility of other worlds than this. This is the only world God actually created, but since, in creating, "God does not act from natural necessity," and since, in the act of creation, the divine will "is not naturally and from any necessity determined to these creatures," Aquinas concludes that "in no way is the present scheme of things produced by God with such necessity that other things could not come to be."

As the chapter on WILL indicates, Spinoza holds that God does not have the power of free

choice. He therefore argues that the actual world, being the only possible one, cannot be bettered. All things, he writes, have been "produced by God in the highest degree of perfection, since they have necessarily followed from the existence of a most perfect nature." Aquinas, on the other hand, denies that this is the best of all possible worlds. "Given the things which actually exist," he says, "the universe cannot be better, for the order which God has established in things, and in which the good of the universe consists, most befits things. . . . Yet God could make other things, or add something to the present creation; and then there would be another and a better universe."

OTHER SPECULATIONS CONCERNING the cosmos seem to divide into three sorts, according as they consider the matter and space, the size and shape, of the universe; or they try to discover the principle by which all things are ordered together in one world; or they examine whatever order is found, and judge its perfection, its goodness, and its beauty.

The first of these three types of cosmological theory belongs primarily to the physicist and the astronomer. From Aristotle to Einstein, observation, mathematical calculation, and imaginative hypotheses have propounded the alternatives of a finite or infinite universe or, as Einstein prefers to put it, of a "finite yet unbounded universe," as opposed to one which is either simply finite or both infinite and unbounded.

Archimedes in the *Sand-Reckoner* undertakes to show that the number of the grains of sand in a universe whose outer sphere extends to the distance of the fixed stars, is, however large, a finite rather than an infinite number. Lucretius and Newton, as we have seen, embrace the opposite hypothesis, while Aristotle defends the proposition that the universe is finite, bounded and spherical in shape. Among the great astronomers, Copernicus and Kepler, no less than Ptolemy, conceive the world as bounded by an outer sphere. Copernicus opens his treatise by remarking that "the world is like a globe; whether because this form is the most perfect of all . . . or because it is the figure having the greatest volume . . . or because the separate parts of the world, *i.e.*, the sun, moon, and stars,

are seen under such a form; or because all things seek to be delimited by such a form, as is apparent in the case of drops of water and other liquid bodies, when they become delimited through themselves."

A spherical or (if matter is not distributed uniformly) an elliptical or quasi-spherical universe, "will be necessarily finite," according to Einstein, but it will also "have no bounds." Among the conceivable "closed spaces without limits," Einstein points out that "the spherical space (and the elliptical) excels in its simplicity, since all points on it are equivalent." But "whether the universe in which we live is infinite, or whether it is finite in the manner of the spherical universe," he thinks is a question that "our experience is far from being sufficient to enable us to answer." Recent astronomical observations of the velocity of the receding nebulae have suggested the hypothesis of an infinitely expanding universe.

These cosmological theories are more fully discussed in the chapter on SPACE. Another point of physical speculation concerning the uniformity of the world's matter—not the uniformity of its distribution, but the sameness or difference in kind of terrestrial matter and the matter of the heavenly bodies—is considered in the chapters on ASTRONOMY and MATTER. We turn, therefore, to the question of the world's structure, apart from its size, its shape, and the disposition of its matter.

THREE METAPHORS SEEM to express the great traditional images of the world's structure. The world is a living organism. *It is like an animal* with a soul, even a soul endowed with reason. The world is a multitude of diverse and unequal individual things, forming a hierarchy and associated, according to their natures and functions, for the common good of the whole. *It is like a society*, a society under divine law and government. The world is a system of interdependent moving parts, linked together from the least to the greatest in an unbroken chain of causation. *It is like a machine*.

The first of these world views is proposed by Plato. It is not the earliest of the three, perhaps, if the atomistic cosmology of Democritus, which Lucretius later expounds, can be interpreted as adopting the mechanical analogy. Full-fledged

mechanism may, however, be thought to await 17th century developments in the science of mechanics, when, for Descartes, Newton, and others, the laws of mechanics become the only laws of nature. The conception of the world as a divinely instituted and governed society seems to be a product of Jewish and Christian faith. Though that expression of it which includes a hierarchical ordering of all things from the elemental bodies to the angels belongs to Christian theologians and poets, there may be a pre-Christian version in the Stoic theory of the world as governed by a divine intelligence.

According to Plato, in the *Timaeus*, "God desired all things to be good and nothing bad," and he "found that no unintelligent creature taken as a whole was fairer than the intelligent taken as a whole; and that intelligence could not be present in anything which was devoid of soul. For which reason," Timaeus explains, "when he was framing the universe, he put intelligence in soul, and soul in body. . . . Wherefore, using the language of probability, we may say that the world became a living creature truly endowed with soul and intelligence by the providence of God." Since his intention was that "the animal should be as far as possible a perfect whole and of perfect parts," he gave it self-sufficiency, a spherical body—which figure "comprehends within itself all other figures"—and circular movement. The universe did not require, therefore, sense-organs or hands or feet.

"Such was the whole plan of the eternal God about the god that was to be, to whom for this reason he gave a body, smooth and even, having a surface in every direction equidistant from the center. . . . And in the center," according to Timaeus, "he put the soul, which he diffused throughout the body, making it also to be the exterior environment of it; and he made the universe a circle moving in a circle. . . . Having these purposes in view he created the world a blessed god."

The theory of a world soul and of an animated, organic universe appears not only in the *Timaeus*, but also in other Platonic dialogues. In the *Phaedrus*, for example, Socrates says that "the soul in her totality has the care of inanimate being everywhere"; and in the *Lysis*, the Athenian Stranger, asking whether "it is the

soul which controls heaven and earth, and the whole world," replies that "the best soul takes care of the world and guides it along the good path."

In somewhat different form, the theory of a world soul appears in Plotinus, according to whom the cosmic soul belongs only to the material universe and is, therefore, third and lowest in the scale of the "authentic existents." It appears in Gilbert and Kepler, though in the latter largely as the expansion of a metaphor. It is considered by William James, whose comment on the "materialistic, or so-called 'scientific,' conceptions of the universe" is that "they leave the emotional and active interests cold," whereas he thinks "the perfect object of belief would be a God or 'Soul of the World,' represented both optimistically and moralistically. . . . All science and all history would thus be accounted for in the deepest and simplest fashion."

Precisely because exponents of the doctrine attribute divinity to the world soul, Augustine and Aquinas object to it. "Impious and irreligious consequences follow," in Augustine's opinion, from the notion that "God is the soul of the world, and the world is as a body to Him." To those who compare the microcosm with the macrocosm by saying that "the soul is in the body as God is in the world," Aquinas replies that "the comparison holds in a certain respect, namely, because as God moves the world, so the soul moves the body. But it does not hold in every respect, for the soul did not create the body out of nothing as God created the world."

Furthermore, according to Aquinas, "God is not a part of it, but far above the whole universe, possessing within Himself the entire perfection of the universe in a more eminent way." God in relation to the world should not be conceived by analogy with soul and body, but by comparison to a king who "is said to be in the whole kingdom by his power, although he is not everywhere present." This analogy fits better with the conception of the universe as a society under divine government.

Although Aurelius reminds himself to "regard the universe as one living being, having one substance and one soul," he also takes the view that the world is a community of things ordered to one another. "The intelligence of

the universe is social," he writes. "Accordingly it has made the inferior things for the sake of the superior, and it has fitted the superior to one another. . . . It has subordinated, co-ordinated, and assigned to everything its proper portion." This view of the universe as a community is the one most fully developed in Christian thought. Augustine and Aquinas go much further than Aurelius in depicting the hierarchy of things and their ordination to one another under the eternal law. Both take as a basic text from Scripture the statement that God has "ordered all things in measure, and number, and weight." According to its dignity or worth, each thing occupies a place and plays its part in the general scheme of things.

"The parts of the universe are ordered to each other," Aquinas writes, "according as one acts on another, and according as one is the end and exemplar of the other." The government of the universe by the divine reason produces a perfection of order in the whole, which is the intrinsic common good of the universe, and directs each thing to the attainment of its end, in which consists its own perfection. "It belongs to the divine goodness," Aquinas says, "as it brought things into being, to lead them to their end. And this is to govern." But neither the perfection of each thing, nor the order of the universe itself, is the ultimate end of divine government. "Some good outside the whole universe," he says, "is the end of the government of the universe"—for the end of all things, as their beginning, lies in the goodness of God.

THE CONCEPTION OF THE WORLD as divinely governed, and cared for by divine providence, excludes chance as a factor in the formation of the world or in its structure. With Democritus and Epicurus in mind, Aquinas points out that "certain ancient philosophers denied the government of the world, saying that all things happened by chance." But the rejection of chance does not seem to be peculiar to Christian faith or theology.

Plato and Plotinus also deny that the order in the universe can be the result of chance. For Plato it is not merely that the world is animated by a rational soul, but also, as the Athenian Stranger suggests in the *Laws*, that it is a work of art rather than of nature or chance.

"'Atoms' or 'elements'—it is in either case an absurdity, an impossibility," writes Plotinus, "to hand over the universe and its contents to material entities, and out of the disorderly swirl thus occasioned to call order . . . into being." According to him, "there is nothing undesignated, nothing of chance, in all the process." Aristotle, too, speaks against the atomists who "ascribe this heavenly sphere and all the worlds to spontaneity" or chance. "When one man," he writes, referring to Anaxagoras, "said that reason was present—as in animals, so throughout nature—as the cause of order and of all arrangement, he seemed like a sober man in contrast with the random talk of his predecessors."

It might be supposed that those who view the world through the eyes of Newton or Descartes (when they say, as Fielding does, "the world may indeed be considered as a vast machine"), would be inclined to favor chance rather than reason or design. But this does not seem to be the case, at least not for Newton or Descartes. "This most beautiful system of the sun, planets, and comets," Newton declares, "could only proceed from the counsel and dominion of an intelligent and powerful Being."

Descartes asks us to consider what would happen if God were now to create a new world "somewhere in an imaginary space." Suppose that He agitated its matter in various ways "so that there resulted a chaos as confused as the poets ever feigned, and concluded His work by merely lending His concurrence to Nature in the usual way, leaving her to act in accordance with the laws which He had established." Something like this orderly universe would be the result. The laws of matter in motion, Descartes thinks, are "of such a nature that even if God had created other worlds, He could not have created any in which these laws would fail to be observed."

In the tradition of the great books, only the ancient atomists seem to take the position that the universe is a thing of chance. But this does not mean that, except for the atomists, agreement prevails concerning the manifestation of purpose or design in the world's structure. "Is the Kosmos an expression of intelligence, rational in its inward nature, or," James asks, "a brute external fact pure and simple?" James finds two answers to this question which he

calls "the deepest of all philosophic problems"—one which regards the world "as a realm of final purposes, that . . . exists for the sake of something," and one which sees "the present only as so much mere mechanical sprouting from the past, occurring with no reference to the future."

As the chapter on MECHANICS indicates, Newton and Descartes are, in a sense, mechanists; yet they also affirm final causes—ends or purposes—in the plan of the universe. Newton speaks of God's "most wise and excellent contrivance of things, and final causes." It is true that Descartes, while referring to the universe as a work of divine art, says that God's purpose may not be visible to us in all its arrangements. Therefore "the species of cause termed final finds no useful employment in physical (or natural) things; for it does not appear to me," he explains, "that I can without temerity seek to investigate the (inscrutable) ends of God." But this states a rule of method in natural science, not the denial of a cosmic plan.

That denial is to be found, however, most plainly in Spinoza. "It is commonly supposed," he writes, "that all things in nature, like men, work to some end; and indeed it is thought to be certain that God Himself directs all things to some sure end, for it is said that God has made all things for man, and man that he may worship God." Against this view, which he regards as the most besetting of all human prejudices, Spinoza holds that "nature does nothing for the sake of an end, for that eternal and infinite Being whom we call God or Nature acts by the same necessity by which He exists." Since "He exists for no end, He acts for no end; and since He has no principle or end of existence, He has no principle or end of action. A final cause, as it is called," Spinoza continues, "is nothing, therefore, but human desire, in so far as this is considered as the principle or primary cause of anything."

Because man discovers things in nature which serve as means to his own ends, man is led to infer, Spinoza declares, that "some ruler or rulers of nature exist, endowed with human liberty, who have taken care of all things for him, and have made all things for his use . . . and hence he affirmed that the gods direct everything for his advantage, in order that he may

be bound to them and hold them in the highest honor. . . . Thus has this prejudice been turned into a superstition, and has driven deep roots into the mind—a prejudice which was the reason why everyone has so eagerly tried to discover and explain the final causes of things." The attempt, however, to show that nature does nothing in vain (that is to say, nothing which is not profitable to man) seems, in Spinoza's opinion, "to end in showing that nature, the gods, and man are alike mad."

WHERE SPINOZA DENIES purpose or plan in the universe because everything exists or happens from the necessity of efficient, not final, causes (and ultimately from the necessity of nature or God himself), Lucretius argues against design or providence from the imperfection of the world. To those who "suppose that the gods designed all things for the sake of men," Lucretius says: "Even if I did not know what first-beginnings are, yet this, judging from the very arrangements of heaven, I would venture to affirm, and led by many other circumstances to maintain, that the nature of the world has by no means been made for us by divine power: so great are the defects with which it stands encumbered."

Spinoza would dismiss this argument. He thinks he can easily answer those who ask, "How is it that so many imperfections have arisen in nature—corruption, for instance, of things till they stink; deformity, exciting disgust; confusion, evil, crime, etc.?" He holds that "the perfection of things is to be judged by their nature and power alone; nor are they more or less perfect because they delight or offend the human senses, or because they are beneficial or prejudicial to human nature."

Others deal differently with the apparent imperfections in the world. Descartes, for example, makes the point that "the same thing which might possibly seem very imperfect . . . if regarded by itself, is found to be very perfect if regarded as part of the whole universe." Marcus Aurelius goes further. "Nothing is injurious to the part," he writes, "if it is for the advantage of the whole. . . . By remembering, then, that I am part of such a whole, I shall be content with everything that happens."

In terms of another principle, Berkeley asks

us to "consider that the very blemishes and defects of nature are not without their use, in that they make an agreeable sort of variety, and augment the beauty of the rest of creation, as shades in a picture serve to set off the brighter and more enlightened parts. . . . As for the mixture of pain or uneasiness which is in the world, pursuant to the general laws of nature," he thinks that "this, in the state we are in at present, is indispensably necessary to our well-being."

In the opinion of those "philosophers who, after an exact scrutiny of all the phenomena of nature, conclude that the *whole*, considered as one system is, in every period of its existence, ordered with perfect benevolence," Hume sees only a specious, if also sublime, consolation for all human ills. But he does not think such convictions ever really work in practice. "These enlarged views may, for a moment," he says, "please the imagination of a speculative man, who is placed in ease and security; but neither can they dwell with constancy on his mind, even though undisturbed by the emotions of pain or passion; much less can they maintain their ground when attacked by such powerful antagonists."

But according to theologians like Augustine and Aquinas, evil does not and cannot exist in the world except as a privation or corruption of some good. "Evil neither belongs to the perfection of the universe, nor comes under the order of the universe," writes Aquinas, "except accidentally, that is, by reason of some good joined to it." But how does evil enter into a world created by a supremely good deity? What "God chiefly intends in created things," Aquinas answers, "is the good of the order of the universe. Now the order of the universe requires . . . that there should be some things that can, and sometimes do, fail. And thus God, by causing in things the good order of the universe, consequently and, as it were by accident, causes the corruptions of things." Furthermore, "the order of justice belongs to the order of the universe; and this requires that penalty should be dealt out to sinners. And so God is the author of the evil which is penalty, but not of the evil which is fault."

ON THIS POINT OF THE PERFECTION of the universe, the great conversation passes from the

order of the world to the problem of evil and to related issues. When Freud, for example, in commenting on what he calls "the religious Weltanschauung," says that "earthquakes, floods and fires do not differentiate between the good and devout man, and the sinner and unbeliever," he raises questions which are considered in the chapters on JUSTICE, PUNISHMENT, and GOOD AND EVIL. The perfection of the universe also leads to a discussion of the beauty of its order. The praises which are differently voiced by the astronomers, the theologians, and the poets extol not the visible beauties of nature, but the intelligible beauty of the cosmic structure—perceptible to a Kepler in his mathematical and musical formulation of the harmonies of the world.

In addition to questions of its goodness and beauty, the problem of the world's order is sometimes stated in terms of its rationality. For some writers, such as Hegel, rationality is affirmed as the very foundation of existence. "*What is rational is actual and what is actual is rational*," he writes. "On this conviction the plain man like the philosopher takes his stand, and from it philosophy starts in its study of the universe of mind as well as the universe of nature." To others, like William James, "the whole war of the philosophies is over that point of faith. Some say that they can see their way already to the rationality; others that it is hopeless in any other but the mechanical way. To some the very fact that there is a world at all seems irrational."

Against the Hegelian notion of the world as a perfectly ordered whole (to which James applies the epithet "block universe"), James proposes the conception of a "concatenated universe." "The real world as it is given at this moment," James declares, "is the sum total of all its beings and events now. But can we think of such a sum? Can we realize for an instant what a cross-section of all existence at a definite point in time would be? While I talk and the flies buzz, a sea-gull catches a fish at the mouth of the Amazon, a tree falls in the Adirondack wilderness, a man sneezes in Germany, a horse dies in Tartary, and twins are born in France.

"What does that mean?" James asks. "Does the contemporaneity of these events with each

other, and with a million more as disjointed as they, form a rational bond between them, and unite them into anything that means for us a world?" It would certainly not mean a universe or cosmos for those who, like Hegel, insist upon the pervasive unity of the universe as a whole which completely and rationally relates all its parts. But for James, who conceives the universe in a pluralistic rather than in a monistic fashion, the "collateral contemporaneity" of all things, "and nothing else, is the *real* order of the world."

ALL OF THESE ISSUES carry the discussion back to what is perhaps the decisive question—the question of the world's origin. According as men believe it to be the purposeful work of a beneficent intelligence or the product of blind chance or of equally blind necessity, their other judgments about the world tend in the general directions of optimism or pessimism. Yet this is only true for the most part.

The problem of the world's origin involves some technical issues which do not seem to have such consequences for man's appraisal of the universe. One is the question whether a created world has a beginning in time or is co-eternal with its creator. As is indicated in the chapters on ETERNITY and TIME, whichever way the disputed question concerning the eternity of the world is answered, its creation may be affirmed or denied. Those who think the world is created declare that the power needed to maintain the world in being is identical with the creative power needed to initiate it. "The divine conservation," as Berkeley points out, is conceived as "a continual creation."

The most difficult point in issue concerns the meaning of creation itself. According to Christian doctrine, the essence of creation consists in making something out of nothing. On this principle Aquinas, for example, contrasts creation with generation or procreation and with artistic production. In biological generation, the offspring is produced out of the substance of its progenitors. In artistic production, some pre-existent material is transformed by the craftsman. But according to the theologian, creation is not change, "for change means that the same thing should be different now from what it was previously."

In becoming or alteration, some being is presupposed. "Creation is more perfect and more excellent than generation and alteration," Aquinas says, "because the term *whereto* is the whole substance of the thing; whereas what is understood as the term *wherefrom* is absolutely non-being," which, as he remarks, is the same as *nothing*. Since the distance between total non-being and being is infinite, only an infinite power can create, or make something out of nothing.

Lucretius flatly denies this possibility when he asserts as a first principle that "nothing can be produced from nothing." Not even the gods can violate this principle. "Nothing," he declares, "is ever gotten out of nothing by divine power." To Locke, on the other hand, the inconceivability of creation constitutes no argument against it. Writers like Lucretius "must give up their great maxim, *Ex nihilo nihil fit*. . . . It is not reasonable to deny the power of an infinite Being because we cannot comprehend its operations. We do not deny other effects upon this ground," Locke continues, "because we cannot possibly conceive the manner of their production. . . . It is an over-valuing ourselves, to reduce all to the narrow measure of our capacities, and to conclude all things impossible to be done, whose manner of doing exceeds our comprehension."

But may not the world be related to a supreme cause or principle in some way which does not involve *exnihilation*? The great books present various alternatives. Aristotle's prime mover is the unmoved and eternal cause of the world's eternal motion, not of its coming into being or its conservation in being. Plato's demiurge is a divinity which, according to the myth of the world's origin in the *Timaeus*, fashions the universe after the model of the eternal ideas, artistically producing their sensible replicas in the matter or space which is called "the receptacle."

The emanation of the sensible as well as the intelligible world from the transcendent All-One in the cosmogony of Plotinus, or the production of finite things from the infinite substance of God in Spinoza's theory, seem to be more like generation or procreation than like creation in the meaning of the opening chapter of Genesis.

Such theories, according to theologians like Augustine and Aquinas, or philosophers like Berkeley and Locke, deny what is meant by creation in the Judaeo-Christian tradition. To Berkeley they are all equally forms of atheism. Yet it should be remarked that to Spinoza a theory like that of Plato's is also impious; for it places "something outside of God which is independent of Him, to which He looks while He is at work as to a model, or at which He aims as if at a certain mark. This is indeed nothing else than to subject God to fate, the most absurd thing which can be affirmed of Him whom we have shown to be the first and only free cause of the essence of all things as well as of their existence."

THE VARIOUS THEORIES OF the world's origin usually extend also to the problem of the world's end. Aristotle, for example, who denies a beginning to the motions of the heavens and all other cycles of natural change, affirms them to go on in everlasting perpetuity. But it is not merely those who think the world has no beginning or source who attribute endless endurance to it. If the world did not have endless duration, it would not be for Plato the moving image of eternity. And though they conceive the world as somehow a divine emanation or production, Plotinus and Spinoza, no less than Aristotle, hold it to be everlasting if not eternal. "We hold that the ordered universe, in its material mass," Plotinus writes, "has existed for ever and will for ever endure."

The proposition that nothing is ever reduced to nothing is, for Lucretius, as true as the principle that nothing ever comes from nothing. He applies these principles, however, only to the eternal atoms, uncreated and indestructible, not to the world after world which arises and perishes as the atoms come together and disperse. Just as any compound body which atoms form can be dissolved into its simple bodies, so whole worlds are subject to similar dissolution, and will suffer it in the course of long ages. Yet though world succeeds world in the ceaseless activity of the eternal atoms, Lucretius contemplates a universe without beginning or end.

Since annihilation (or reduction to nothingness) is the opposite of exnihilation (or creation out of nothing), it might be expected that the

doctrine which rests on the faith that "in the beginning God created heaven and earth," would also foresee an end to all things—a return of the whole created universe to the nothingness from which it came. Sacred Scripture does contain the prophecy of a final cataclysm. "The earth shall reel to and fro like a drunkard, and shall be removed like a cottage," says Isaiah. Reciting the parable of the tares in the field, Matthew explains that as "the tares are gathered and burned in the fire, so shall it be in the end of this world." In the Gospel according to Luke, Christ foretells His second coming:

And there shall be signs in the sun, and in the moon, and in the stars; and upon the earth distress of nations, with perplexity; the sea and the waves roaring;

Men's hearts failing them for fear, and for looking after those things which are coming on the earth: for the powers of heaven shall be shaken;

And then shall they see the Son of man coming in a cloud with great power and great glory . . .

Heaven and earth shall pass away; but my word shall not pass away.

But there is one other text which exercises a controlling influence on the theologian's interpretation of Scripture. In the second Epistle of Peter, we find:

. the day of the Lord will come as a thief in the night; in the which the heavens shall pass away with a great noise, and the elements shall melt with fervent heat, the earth also and the works that are therein shall be burned up

Nevertheless we, according to his promise, look for new heavens and a new earth, wherein dwelleth righteousness.

The final conflagration will be the end of the world as we know it, but it will bring about the re-formation, not the annihilation, of the material universe. As God has the power to create, so, according to Aquinas, He has the power to annihilate, but "since the power and goodness of God are rather manifested by the conservation of things in being . . . we must conclude by denying absolutely that anything at all will be annihilated." In the concluding treatises of the *Summa Theologica*—dealing with the end of the world, the Last Judgment, and the resurrection of the body—the final cataclysm is described as the cleansing of the world by fire to bring into being a new earth and a new heaven.

In our time, men talk of the end of the world as an event which might by chance occur if a

chain reaction set up by atomic fission got out of control and exploded the whole material universe. The physicist's theory of entropy also forecasts the eventual dissipation of energy to the point at which the universe will be a frozen mass of inert matter. These are secular alterna-

tives to the religious prophecy of the world's end. But what Jesus said of the Last Judgment—that its time is a secret hidden from men—may be applicable to any termination of the world, certainly if it lies in the hands of God, and not merely at the disposal of man or nature.

OUTLINE OF TOPICS

	PAGE
1. Diverse conceptions of the universe	1131
1a. The universe as a living organism: the doctrine of the world soul	
1b. The universe as a machine: the system of its moving parts	
1c. The universe as an ordered community of beings diverse in kind: eternal law and divine government	1132
2. The universe and man: macrocosm and microcosm	
3. The universe and God: divine immanence and transcendence	1133
3a. The unity of God and the world: the distinction between <i>natura naturans</i> and <i>natura naturata</i>	
3b. The duality of God and the world: the distinction between Creator and creature	
4. The origin of the world: cosmos out of chaos	1134
4a. The denial of ultimate origins: the eternity of the world and its motions without beginning or end	
4b. Myths or hypotheses concerning the world's origin by artistic production: the demiurge, the creative ideas, the receptacle	
4c. The formation of the world by a fortuitous concourse of atoms	
4d. The emanation of the world from the One	
4e. The creation of the world <i>ex nihilo</i>	1135
(1) The distinction between creation and motion, generation, and artistic production	
(2) The problem of time and eternity in relation to creation: the conservation of creatures in time	
(3) The revelation and dogma of creation: interpretations of Genesis 1; the work of the six days	
5. The number of worlds: the uniqueness of this world; the possibility or actuality of other worlds	1136
6. The structure of the world	
6a. The parts and places of the world: the uniformity of the pattern of the world	
6b. The diversity, inequality, and hierarchy of things	1137
6c. The rationality or intelligibility of the universe	
6d. The goodness and beauty of the universe: its evil and imperfections	
7. The space of the world: astronomical theories concerning the size or extent of the universe	1138
8. The end of the world	1139

REFERENCES

To find the passages cited, use the numbers in heavy type, which are the volume and page numbers of the passages referred to. For example, in 4 HOMER: *Iliad*, BK II [265-283] 12d, the number 4 is the number of the volume in the set; the number 12d indicates that the passage is in section d of page 12.

PAGE SECTIONS: When the text is printed in one column, the letters a and b refer to the upper and lower halves of the page. For example, in 53 JAMES: *Psychology*, 116a-119b, the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns, the letters a and b refer to the upper and lower halves of the left-hand side of the page, the letters c and d to the upper and lower halves of the right-hand side of the page. For example, in 7 PLATO: *Symposium*, 163b-164c, the passage begins in the lower half of the left-hand side of page 163 and ends in the upper half of the right-hand side of page 164.

AUTHOR'S DIVISIONS: One or more of the main divisions of a work (such as PART, BK, CH, SECT) are sometimes included in the reference; line numbers, in brackets, are given in certain cases; e.g., *Iliad*, BK II [265-283] 12d.

BIBLE REFERENCES: The references are to book, chapter, and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses, the King James version is cited first and the Douay, indicated by a (D), follows; e.g., OLD TESTAMENT: *Nehemiah*, 7:45—(D) *II Esdras*, 7:46.

SYMBOLS: The abbreviation "esp" calls the reader's attention to one or more especially relevant parts of a whole reference; "passim" signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references, see the Explanation of Reference Style; for general guidance in the use of *The Great Ideas*, consult the Preface.

1. Diverse conceptions of the universe

1a. The universe as a living organism: the doctrine of the world soul

7 PLATO: *Phaedrus*, 124b-d / *Timaeus*, 447d-450c / *Statesman*, 586c-590a / *Philebus*, 618b-619d / *Laus*, BK X, 757d-765c

8 ARISTOTLE: *Physics*, BK VIII, CH 2 [252^b17-28] 336c-d; [253^b6-21] 337a-b / *Heavens*, BK II, CH I [284^a27-35] 376a / *Soul*, BK I, CH 5 [411^a6-23] 641a-b

APPENDICES

APPENDIX I

BIBLIOGRAPHY OF ADDITIONAL READINGS

The Bibliography of Additional Readings provides information concerning the authors and works cited in the Additional Readings. In addition to the full name and dates of each author, the Bibliography gives as much of the following information as is appropriate to each work cited: the full title (and subtitle, if any); the name of the editor or translator, if these are identified in the recommended edition; the place of publication of the edition or translation recommended; the name of the publisher and the date of publication; the original title; the date and, in some cases, the place of composition or publication.

Since the Additional Readings are 102 separate lists of authors and works, and the Bibliography is a single compilation of the titles which comprise these 102 lists, each was constructed according to different principles. The following statement of these principles serves to guide the reader in using the Bibliography in relation to the Additional Readings.

AUTHORS' NAMES: In the Additional Readings, surnames are used, with initials added only where necessary to distinguish identical surnames; for example, J. H. NEWMAN. In a few exceptional cases, full names are used because this is the more recognizable form; for example, LEONARDO DA VINCI. The common Anglicized spelling is employed for reference to foreign names.

The alphabetical order of authors' names in the Bibliography is determined by the way in which the names appear in the Additional Readings. Initials do not affect the order; for example, J. H. NEWMAN appears in the Bibliography as NEWMAN, JOHN HENRY. When full names are used in the Additional Readings, the first name determines the alphabetical location of the author in the Bibliography; for example, LEONARDO DA VINCI is listed under "L," not under "D" or "V."

TITLES OF WORKS: In the Additional Readings, full titles are generally used. In some cases abbreviated forms are employed to avoid undue length. All subtitles are omitted.

In the Bibliography, both title and subtitle are used; and, with few exceptions, the title is given as it appears on the title page of the edition cited.

Titles are arranged in alphabetical order under the names of their authors. The alphabetization of titles disregards initial English articles (*a*, *an*, and *the*), but not prepositions (*of*, *on*, etc.).

The titles of anonymous works are placed in alphabetical order among the authors' names; for example, *Aucassin and Nicolette* appears in the Bibliography between ATHANASIUS and AUGUSTINE.

The opening words of a shortened title in the Additional Readings sometimes differ from those of the full title. In these cases, the short title precedes the full title in the Bibliography, and is placed in brackets; for example, Faraday's *Various Forces of Matter* appears in the Bibliography as [Various Forces of Matter] *A Course of Six Lectures on the Various Forces of Matter and Their Relations to Each Other*.

The full title sometimes includes the names of a number of works, of which the Additional Readings cites only one. If the opening words of the full title differ from those of the title in the Additional Readings, the latter is placed in brackets and precedes the full title in the Bibliography; for example, Shaw's *Crude Criminology* appears in the Bibliography as [Crude Criminology] *Doctors' Delusions, Crude Criminology, and Sham Education*. The alphabetization is determined by the bracketed title, since this is the title which appears in the Additional Readings.

TRANSLATIONS: The manner of citing titles in the Additional Readings indicates whether a foreign work is available in English translation. If no translation exists or is available, the title is given only in its original language. If, however, the work has been translated, the English title is always used, sometimes in conjunction with its original foreign title. When two

THE GREAT IDEAS

titles are thus given, which appears first depends in large part on the wording of the title page or the backbone of the volume which contains the translation.

Some translations carry the original title in the primary place, and use the translation as a secondary title. Some translations use only the English title. In these cases, where the work is well known under its original title, this is added in parentheses after the English title. Some translations use only the foreign title. In these cases, an English version is added in parentheses after the original title.

In the Bibliography, the titles of translated works are listed alphabetically according to the way in which they are cited in the Additional Readings. If the original title is given first in the Additional Readings, then only it is used in the Bibliography. If the English title is given first in the Additional Readings, or if only it is used, then the work is listed alphabetically in the Bibliography according to the English title. In these cases the English title is always accompanied by the original title in parentheses.

COLLECTIONS. In the Additional Readings, the titles of essays or papers which are parts of a published collection are sometimes given within quotation marks, followed by the title of the collection, the latter appearing in italics, for example, J. H. NEWMAN "Private Judgment," in Vol. II, *Essays and Sketches*, or McILWAIN "The Fundamental Law Behind the Constitution," in *The Constitution Reconsidered*. In these cases it is the italicized title of the collection in which the essay or paper is published rather than the quoted title of the essay or paper, which is listed in the Bibliography, for example, the essay by McIlwain, in the example above is represented in the Bibliography by the following entry under McILWAIN, CHARLES HOWARD *The Constitution Reconsidered*.

The title of an individual essay or paper, or of a single lyric poem, is sometimes cited in the Additional Readings without reference to the collection in which it is published. In these cases, the title is italicized, not quoted. The individual work is represented in the Bibliography by this title, and the bibliographical information includes the title of the collection in which it is published.

A work listed in the Additional Readings may be available only in a collection or set of volumes with a single collective title. The collective title and the number of the volume in which the cited work appears are included in the bibliographical information, for example, what is cited in the Additional Readings as "AUGUSTINE *On the Trinity*," is represented in the Bibliography by the following entry under AUGUSTINE, AURELIUS, SAINT, BISHOP OF HIPPO "On the Trinity. In Vol. III, *Select Library*" *Select Library* is a shortened form of the collective title of a set of volumes, *i.e.*, *A Select Library of the Nicene and Post-Nicene Fathers of the Christian Church* 1d. by P. Schaff. First Series, 8 vols.

When the full title of a collection, and bibliographical information about it, is given as part of the entry for a particular title, subsequent listings of other parts of the same collection may refer back to the collective title by using *ibid.* or *q.v.* or "see above." In other cases, only a shortened form of the collective title is given in the entry itself. Here the collective title in full, accompanied by bibliographical information, is given in a note appended to the last entry for that author.

WHOLE AND PART CITATIONS. In all cases in which parts of a work are recommended in the Additional Readings, the citation indicates these parts in a number of ways. It usually gives author's, editor's, or translator's divisions of the work, such as book, part, chapter, section, etc. In the few cases where such divisions are not citable, it gives page references to a particular edition. When page numbers are given, it is, of course, necessary to use this edition to find the pages cited.

When author's or editor's divisions are used, they are usually applicable to all standard editions of the work, especially if it was originally written in English. In the case of translations, it sometimes happens that the translator has made his own divisions of the work. Where this is so, the divisions indicated must be found in the particular translation specified in the Bibliography. The author's or translator's divisions are given in the same manner as similar divisions are given in the Reference sections of the 102 chapters; *i.e.*, **BOOK**, **PART**, **CH**, **SEC**, etc., followed by the number of the division in Arabic or Roman numerals according to the usage of the work cited.

Sometimes letters or numbers, without part names, signify subordinate divisions of the author's work, for example, HEGEL, *The Phenomenology of Mind*, IV, B (3). These are given precisely as they appear in the works themselves.

In a few cases, the recommended part of an author's work is titled. Such titles are placed in parentheses after the title of the work itself; for example, PÉGYU, *Basic Virtues* (Freedom).

BIBLIOGRAPHY

CHRONOLOGICAL ORDER In the Additional Readings, the titles are listed in a chronological order; or, more precisely, they are divided into two groups, each in chronological order. The first of these consists of works written by the authors represented in *Great Books of the Western World*, but not published in this set, the second consists of works by other authors.

The order is determined in the same way in both groups—by the date of an author's work, not by his birth or death date. For each title listed in the Additional Readings, the determining or order date is given in the Bibliography.

For all contemporary works, and works written in English which appear in only one edition, the date which follows the place of publication and the name of the publisher is the order date.

For all translations, the order date is the date of the original writing or publication. This is given in parentheses, along with information about the original title and its place of writing or publication.

Similarly, for works which have been recently republished or which exist in several editions, the order date is the date of the original publication, or perhaps the date of composition. This date is given in parentheses. If it is the date of composition, it is given by itself. If it is the date of a first edition or an original publication of the work, it is given with other bibliographical information.

When parts of collections—poems, essays, plays—are individually cited, the order is determined by the date, in parentheses, of the individual work, not by the publication date of the collection.

When the entry for a particular title in the Bibliography includes two dates, the order date is always the one in the parentheses at the end of the entry.

A question mark in conjunction with a date signifies that it cannot be determined with certainty, the letter *c* (for *circa*, or 'about') signifies that the date is regarded as an approximation.

In a great many cases, more than one work is cited for a particular author, and often the publication date, or even the date of composition, is difficult to ascertain. This is especially true of works written in antiquity. Hence the chronological principle had to be applied with the following qualifications:

1. When two or more works by the same author are cited, they are grouped together under his name in strict chronological sequence. The chronological position of such a group of titles is determined by the date of the most recent title in the group. Hence, the whole series of individual titles in a list of Additional Readings may not be in strict chronological sequence.
2. If the work was published in the author's lifetime, the date used (if available) was that of its first publication. In the case of posthumously published works, the date of composition was used.
3. In the case of works for which no publication or composition date was available, the date of the author's death was usually substituted, or, as indicating the period in which he flourished, the median date of the author's life.
4. In the case of lectures later compiled and published as books, the date the lectures were first delivered was used.
5. In the case of a work published in several volumes over a period of years, the publication date of the first volume was used.
6. In the case of collections of papers or essays published during the author's lifetime and within a short time of the first scattered publication of the individual papers or essays, the date used was the publication date of the collection. But when the collection was published posthumously, or a long time elapsed between the first scattered publication and the publication of the collection, the median date of original publication dates was used. Whenever one set of dates could not be definitely determined, the other was used.
7. If a collection, published posthumously, represented the bulk of an author's writing, a date in the middle of his productive period was chosen.
8. When a single essay from a collection was cited, the date of the original publication of that essay was used, not the publication date of the collection.

THE GREAT IDEAS

9. In the case of single plays, the date used was that of original publication or first performance, whichever could be more definitely ascertained. If both were equally ascertainable, the earlier was used.
10. The publication date of a single lyric poem was used if it appeared separately before its appearance in a collection. Otherwise the date of the collection was used.

Because the foregoing factors affected the application of the chronological principle, the authors are frequently not listed in strict chronological order in the Additional Readings. However, the precise chronological position of each author can be determined by his life dates, which appear in the Bibliography. A question mark in conjunction with these dates signifies that they cannot be determined with certainty; the letter *c.* signifies that a date is regarded as an approximation; and *fl.* (for *floruit*) indicates that a date given is the period when the author flourished.

ABAILARD, PETER (1079-1142)

- Dialectica*. In *Ouvrages inédits pour servir à l'histoire de la philosophie scolastique en France*. Ed. by V. Cousin. Paris: Imprimerie Royale, 1836 (before 1125).
- Ethics*. Ed. and trans. by J. R. McCallum. Oxford: Blackwell, 1935 (*Scito Teipsum, seu Ethica*, before 1140).
- The Glosses of Peter Abailard on Porphyry*. In *Selections from Medieval Philosophers*. Ed. and trans. by Richard McKeon. 2 vols. New York: Scribner's, 1929-1930 (*Petri Abaelardi Glossae in Porphyrium*).
- Introductio ad Theologiam*. Ed. by V. Cousin. Paris, 1859 (1136-1140).
- The Letters of Abelard and Heloise*. Trans. by C. K. Scott Moncrieff. New York: A. A. Knopf, 1929 (c. 1130-1140).
- Sic et Non*. In *Petri Abaelardi, Opera Omnia*. Ed. by J. P. Migne. Paris: Garnier, 1885.

ABERCROMBIE, LASCELLES (1881-1938)

- An Essay Towards a Theory of Art*. London: M. Secker, 1922.
- The Theory of Poetry*. New York: Harcourt Brace, 1926 (originally pub. as *The Theory of Poetry and The Idea of Great Poetry*, London, 1924; 1925).

ABETTI, GIORGIO (1882-)

- The Sun: Its Phenomena and Physical Features*. Trans. by A. Zimmermann and F. Borghouts. New York: Van Nostrand, 1938 (*Il sole*, Milan, 1936).

ACTON, JOHN EMERICH EDWARD DALBERG, LORD (1834-1902)

- Essays on Freedom and Power*. Boston: Beacon Press, 1948 (*The History of Freedom in Antiquity and The History of Freedom in Christianity*, both Bridgforth, 1877).

ADAMS, BROOKS (1848-1927)

- The Law of Civilization and Decay: An Essay on History*. New York: A. A. Knopf, 1943 (London, 1895).

- The Theory of Social Revolutions*. New York: Macmillan, 1913.

ADAMS, HENRY BROOKS (1838-1918)

- The Degradation of the Democratic Dogma*. Ed. by B. Adams. New York: Macmillan, 1920 (1894-1910).
- The Education of Henry Adams*. Modern Library, New York: Random House, 1941 (1906).
- Mont-Saint-Michel and Chartres*. New York: Houghton Mifflin Co., 1927 (Washington, 1904).

ADAMS, JOHN (1735-1826)

- A Defense of the Constitutions of Government of the United States of America*. In Vols. IV-VI, *Works of John Adams*. Ed. by C. F. Adams. 10 vols. Boston: Little, Brown & Co., 1850-1856 (1787).

ADLER, MORTIMER JEROME (1902-)

- Art and Prudence, a Study in Practical Philosophy*. New York: Longmans, Green & Co., 1937.
- Dialectic*. New York: Harcourt Brace, 1927.
- A Dialectic of Morals; Towards the Foundations of Political Philosophy*. Notre Dame, Ind.: The Review of Politics, University of Notre Dame, 1941.
- How to Think About War and Peace*. New York: Simon & Schuster, 1944.
- Problems for Thomists: The Problem of Species*. New York: Sheed & Ward, 1940.

ADRIAN, EDGAR D. (1889-)

- The Basis of Sensation*. New York: W. W. Norton, 1928.

AESOP'S FABLES. Trans. by V. S. Vernon Jones. New York: Garden City Publishing Co., 1939.

AGARD, WALTER RAYMOND (1894-)

- What Democracy Meant to the Greeks*. Chapel Hill, N. C.: University of North Carolina Press, 1942.

AIRY, SIR GEORGE HIDDLELL (1801-1892)

- Gravitation. An Elementary Explanation of the Principal Perturbations in the Solar System*. London: Macmillan, 1884 (London, 1834).

ALAIN, pseud. for ÉMILE CHARTIER (1868-1951)

- Système des beaux-arts*. Paris: Éditions de la Nouvelle Revue Française, 1920.

- ALBERTI, LEONE BATTISTA (1404-1472)
Della Famiglia. Milan: Istituto Editoriale Italiano, 1910? (1443).

NOTE:

S. Thomae Aquinatis *Opuscula Omnia*. Ed. by P. Mandonnet. 5 vols. Paris: Lethielieux, 1927.

ARIOSTO, LUDOVICO (1474–1533)

Orlando Furioso. Trans. by W. S. Rose. 2 vols. New York: G. Bell & Sons, 1892 (Ferrara, 1516).

ARISTARCHUS (fl. c. 280 B.C.)

On the Sizes and Distances of the Sun and Moon. In Sir Thomas Heath, *Aristarchus of Samos: A History of Greek Astronomy*. Oxford: Clarendon Press, 1913.

ARNAULD, ANTOINE (1612–1694)

Logic or the Art of Thinking: Being the Port Royal Logic. Ed. and trans. by T. S. Baynes. London: W. Blackwood, 1850 (*La logique ou l'art de penser; contenant outre les règles communes, plusieurs observations nouvelles, propres à former le jugement*, Paris, 1662).

ARNAULD, ANTOINE and LANCELOT, CLAUDE (1615–1695)

A General and Rational Grammar Containing the Principles of the Art of Speaking. London, 1753 (*Grammaire générale et raisonnée contenant les fondemens de l'art de parler*, Paris, 1660).

ARNOLD, MATTHEW (1822–1888)

Culture and Anarchy; an Essay in Political and Social Criticism. Ed. by J. D. Wilson. 5 vols. Cambridge University Press, 1932 (London, 1869).

—*Empedocles on Etna*. In *The Poems of Matthew Arnold, 1849–1867*. World's Classics. New York: Oxford University Press, 1940 (London, 1852).

—*Essays in Criticism* (First and Second Series). 2 vols. London: Macmillan, 1935–1937 (London, 1865; 1888).

—*Literature and Dogma; an Essay Towards a Better Apprehension of the Bible*. New York: Macmillan, 1903 (London, 1873).

—*Mixed Essays, Irish Essays and Others*. New York: Macmillan, 1904 (London, 1879).

ARRHENIUS, SVANTE AUGUST (1859–1927)

APPENDIX II

THE PRINCIPLES AND METHODS OF SYNTOPICAL CONSTRUCTION

THE FOLLOWING ESSAY is intended as a supplement to the Preface. The Preface is the editor's statement of the nature, structure, purpose, and uses of the Syntopicon. But, as therein remarked, it does not treat the intellectual and editorial problems which were faced in constructing the Syntopicon, nor does it explain the principles and methods by which they were solved.

Any sustained use of the Syntopicon will undoubtedly raise questions about these principles and methods. Such questions may arise from a purely speculative interest, or they may be prompted by a desire for more detailed guidance in the use of the Syntopicon—the ways in which it can be used, the procedures to facilitate its use, and the limitations to which its use is subject. This essay attempts to anticipate and to give systematic answers to such questions.

Since different problems were faced and different principles followed in the several parts of the work, this essay is divided into the following sections:

	PAGE
I. The Great Ideas and the Inventory of Terms . . .	1219
II. The Outlines of Topics and the Cross-References . . .	1233
III. The Introductions	1254
IV. The References	1265
V. The Additional Readings	1295

I. THE GREAT IDEAS AND THE INVENTORY OF TERMS

THE GREAT IDEAS, LIKE THE GREAT BOOKS, represent a selection. In both cases the criteria controlling the selection can be explained. In neither case do the purpose and rationale of the choice preclude the possibility of disagreement, even when due consideration is given to these criteria.

No list of the great works of western civilization can expect unanimous and unqualified acceptance by persons learned enough to judge. There may be disagreement concerning what constitutes a great book or concerning the principles which give form to the collection as a whole. But even when such disagreement is absent, there are likely to be differences with regard to the inclusion or exclusion of particular authors and titles.

Under the circumstances, the most that can be hoped for is that these differences concern no more than a small fraction of the whole. No greater measure of

acceptance need be sought for a list of great books than assent to a very large proportion of its contents by those who understand the purpose and criteria governing the selection. The editors believe that the 74 authors and the 443 works¹ included in *Great Books of the Western World* form a collection which meets this test.

The same test applies to the list of great ideas which are the titles of the 102 chapters of the Syntopicon. The editors have reason to believe that the number of exceptions which might be taken to this list, by way of addition or subtraction, would be inconsiderable as compared with the total. But, as with the great books, so with the great ideas, the application of this test presupposes some understanding of the criteria of their selection.

The purpose and principles underlying the compilation of *Great Books of the Western World* are stated and illustrated in the introductory essays that comprise Volume 1 of this set. Here we shall undertake to explain the compilation of *The Great Ideas*. The two explanations are mutually supporting.

Both the great books and the great ideas were chosen to represent the unity and continuity of the tradition of western thought. The great books are those which deal imaginatively or intellectually with the ideas which are fundamental throughout this whole tradition. Any important work—ancient, mediaeval, or modern—will necessarily be concerned with these ideas in some way. What distinguishes the great books is the originality, the profundity, and the scope of their treatment of these ideas. Other books, important in some special field of learning, may have these qualities with respect to one idea or even to several related ideas, but the great books possess them for a considerable range of ideas, covering a variety of subject matters or disciplines; and among the great books the greatest are those with the greatest range of imaginative or intellectual content.

It seems fitting that the ideas which are the central insights and the richest concepts of western thought should be used as the touchstone—or at least as one of the principal criteria—for selecting the great books. In the deliberations leading to the selection of *Great Books of the Western World*, the Board of Editors applied this test to particular authors and works. The reader can apply it for himself by comparing the 443 works which are published in this set with the 2600 or more important books listed in the Bibliography of Additional Readings.

It is no less fitting that the books which are creations of the highest literary art and expressions of the most powerful thought in our tradition, should be used to

¹In the Table of Authors, Titles, and Author's Divisions Cited, which concludes the Explanation of Reference Style, the number of authors' names listed is 71. Hamilton, Malison, and Jay, the authors of *The Federalist*, are listed in brackets because their names do not actually appear in the References. The number of titles listed is 437, not 443. The criterion used to determine the number of individual works included in *Great Books of the Western World* was not the same as the principle followed in selecting the separate titles to cite in the References. For example, each play of Shakespeare, each essay of Montaigne, each one of Plutarch's *Lives* was regarded as an individual work; whereas Chaucer's *Canterbury Tales* was counted as a single work, as were Shakespeare's sonnets. But in the References, for reasons of convenience, the titles of particular essays by Montaigne are not cited; instead the collective title, *Essays*, is used. But the titles of the particular lives and the titles of the particular tales in Plutarch and Chaucer are cited. Hence there is a difference between the number of distinct titles cited in the References and the number of individual works which comprise *Great Books of the Western World*.

determine which are the great ideas in that tradition. The work of constructing *The Great Ideas* began with a list much longer than the 102 chapter titles of the Syntopicon in its final form. During the first two years of preliminary work, the editorial staff operated with this list of possible terms, progressively reducing the number to the 102 which were finally selected.

The great majority of terms eliminated were those which did not appear to receive extensive or elaborate treatment in the great books. They were terms that did not seem to have a lively career—a continuous and complex development throughout the three-thousand-year tradition of the great books. The editors used the actual content of the great books as the test whereby to separate a small set of truly great ideas from a much larger number of important concepts or notions. The reader can apply this test himself by comparing the 1800 concepts listed in the Inventory of Terms, with the 102 ideas that are treated as the principal terms in the Syntopicon.

It seems circular to say that the great books are those which deal most fully and significantly with the great ideas, and that the great ideas are those dealt with most fully and significantly in the great books. Circularity in definition is not, however, always a grievous fault. We recognize, for example, the good sense of saying that, among works of art, the best are those preferred by persons of the best taste and greatest critical competence; yet we also find it necessary to say that, among the critics of an art, the best and most competent are those who like the best works best. That each is used to measure the other does not invalidate the measure for anyone who perceives that the same principle—the principle of artistic excellence—is operative, though differently, in both measurements. So, too, the same principle—that of cultural significance in the tradition of western thought—determines which are the great books and which the great ideas. When this is understood, the use of each to measure the other will seem justified.

The editors were keenly aware of this problem during the period in which the two lists—of the great books and the great ideas—were being shaped and given final form, each by reference to the other. But the record of their deliberations will also show that the circularity was far from complete. That it deals in an important way with the great ideas of western thought *is not the only criterion of a great book*. That it receives significant treatment in the great books of the western tradition *is not the only criterion of a great idea*. Other criteria were present in the construction of both lists. Yet even these may not be altogether independent. For example, the recognition that the great books are not merely monuments of our literary and cultural past, but also books of contemporary eminence, parallels the recognition that the great ideas are not merely the vehicles of traditional thought, but also the notions which men must use today in thinking about contemporary realities. The fundamental fact which somehow emerges is that the greatness of the books and the greatness of the ideas derive from the same source.

THE CORRELATION BETWEEN THE GREAT IDEAS and the great books is thus an answer to the question, Why were these 102 terms chosen as the basic divisions of

the Syntopicon? If the books had been radically different, the ideas would have been different also. If, for example, *world culture* were now an historic reality, and if a set of books were chosen to represent the unity and continuity of a *world tradition*, the list of great ideas would probably differ in a number of striking respects. But it is the western world, not the whole world, of which these are the great books and the great ideas.

It is the western tradition *as a whole* that the great books *as a set* represent. But each one of the great ideas, not the total collection of them, stands in relation to the whole tradition represented by the set. One indication of the greatness of these ideas is that each of them pervades the entire tradition. If, for example, the set of great books had been restricted in any way—to represent the culture of antiquity exclusively or only modern thought, or to represent what is sometimes called “the scientific tradition” as opposed to “the tradition of humane letters”—then a somewhat different set of terms would have had to be chosen as the great ideas of that partial or sectarian tradition.

Not all of the great ideas are equally extensive in range. Not all have equal vitality in all the epochs of western civilization, or equal significance for all its intellectual phases. In this sense they are not all equally great.

Ideas like KNOWLEDGE, MAN, GOD have the maximum range, pervading all the major periods and also all the divisions of learning or kinds of literature. Ideas like JUSTICE, LIBERTY, STATE, and WEALTH on the one hand, or like MATTER, SPACE, TIME, and WORLD on the other, have universality insofar as they are basic concepts in all periods of the western tradition. They are discussed from one end of the great conversation to the other. But they are not discussed in *all* the great books, for they are not relevant to every imaginative or intellectual consideration.

Still other ideas do not run evenly throughout the entire tradition. OLIGARCHY, PROPHECY, and ANGEL, for example, have a more lively incidence in ancient or mediaeval than in modern thought. EVOLUTION and PROGRESS are examples of an opposite sort. There may be anticipations of these ideas in ancient and mediaeval thought, but not until the modern period do they become dominant notes in man's view of nature and history.

These exceptions to the universality—in time and interest—of the great ideas testify to the principle followed in selecting the 102 basic terms of the Syntopicon. For the most part, these terms have the requisite universality. The reader can verify this for himself by observing the distribution of authors and books cited in the Reference sections of the various chapters. He will find that authors of every period have a voice in the conversation, and that almost every sort of book is represented—poetry, science, history, philosophy, theology. He will also find, however, that, except for the truly ubiquitous ideas, one or another branch of learning or literature may predominate, and sometimes a whole field of inquiry may be absent. Some ideas, by the intensity of their significance for one epoch or one department of human thought, make up for their limited range or scope. To admit these to the company of the great ideas, the requirement of universality was relaxed.

The varying lengths of the 102 chapters, ranging as they do from 11 to 62 pages, cannot be taken, without some qualification, as a measure of the universality of these ideas in the tradition of western thought. The length of a chapter does not depend *only* on the volume of the references—the number of authors, books, and passages cited; it depends also upon the complexity of the idea, that is, upon the number of topics required to state all the related meanings, problems, or issues which have been discussed in the name of that idea. But these two factors taken together do account for the size of each chapter. The varying chapter length therefore indicates a gradation among the 102 great ideas, with respect to their universality or ubiquity in extent and to their interior complexity or manifold significance in intent.

IT IS IMPOSSIBLE TO DEFINE ANY MINIMUM degree of range and amplitude which distinguishes the ideas selected for syntopical treatment from the hundreds of other terms that were eliminated in the early stages of the work. With regard to the vast majority of those eliminated, a clear and certain judgment was possible, in the light of criteria already stated. There were, of course, borderline cases in which the decision to include or exclude a term remained doubtful even after prolonged deliberation. Such decisions had to be made, finally, in a somewhat arbitrary fashion, in terms of practical criteria not yet stated. One of these, for example, was the necessity for some limitation on the number of chapters. In some cases, the significance of the dropped term might be adequately covered in the analysis of other terms which more clearly deserved inclusion.

The first list of possible terms numbered upward of 700. It might serve some purpose to present a brief sampling of the terms which, while among the most likely candidates for inclusion, were discarded in the early stages of the work.

analysis	generation	persuasion	society
axiom	grammar	population	sovereignty
authority	growth	possibility	spirit
becoming	harmony	poverty	style
belief	heredity	power	substance
character	hero	prediction	superstition
choice	hope	probability	synthesis
conquest	ideal	production	taxation
contemplation	imitation	profit	teaching
creation	inference	property	temperament
criticism	instinct	providence	theory
deduction	intuition	purpose	thought
doubt	jurisprudence	reality	tolerance
environment	learning	republic	tradition
equality	marriage	revelation	use
essence	methodology	revenge	utopia
equity	money	rights	value
fact	nutrition	ruler	volition
faith	obedience	salvation	wages
fallacy	organism	self	woman
force	ownership	sex	worship
friendship	patriotism	skepticism	youth

The penultimate list consisted of 115 terms. Thirteen of these were finally dropped: analogy, biology, body, community, empire, genus and species, health and disease, individual, light, music, order, person, tragedy. From that point on, the words or pairs of words chosen to express the great ideas numbered 102.

THE TWO MEASURES OF INTRINSIC GREATNESS—scope and significance—do not fully explain all the eliminations from the original list. Certain arbitrary factors were operative in the final determination of the 102 chapters of the Syntopicon.

In the first place, a number of words do not appear as chapter titles simply because they are synonyms of words selected as principal terms. For example, "freedom," "motion," "conflict," "obligation," and "universe" were discarded in favor of their synonyms: "liberty," "change," "opposition," "duty," and "world."

In the second place, certain words were paired, either for convenience of treatment or because they are usually discussed together in the great books. Sometimes these words represent fundamental opposites: good and evil, life and death, necessity and contingency, one and many, pleasure and pain, same and other, universal and particular, virtue and vice, war and peace; and sometimes they represent closely associated terms: custom and convention, memory and imagination, sign and symbol. Opposites were not always made explicit, especially if one of the pair was a purely negative term (e.g., justice and injustice, prudence and imprudence, temperance and intemperance); and this policy affected the decision not to pair "cowardice" with "courage." Nor were closely associated terms always indicated in the chapter title. For example, "becoming" might have been associated with "change," "friendship" with "love," "society" with "state," or "despotism" with "tyranny," just as "symbol" is associated with "sign," or "convention" with "custom." The decision in each of these cases rested upon considerations germane to the treatment of a particular chapter, in itself and in its relation to other chapters.

With one exception, the decisions made with regard to synonyms and the pairing of words do not affect the number of chapters, but only the character and the number of words which appear in the chapter titles. That one exception is the pairing of "memory" and "imagination"; each might conceivably have been the title of a separate chapter. Joining them in a single chapter avoided a certain amount of duplication in the topics and references which would have appeared under each.

This leads us to a third principle—a principle of convenience—which affected the number of chapters. The number might have been made smaller by subordinating certain terms to others among the 102. For example, all the forms of government (aristocracy, democracy, constitution, monarchy, oligarchy, tyranny) might conceivably have been treated as topics or groups of topics in the chapter on GOVERNMENT; all the virtues (courage, justice, prudence, temperance, wisdom) might have been similarly treated in the chapter on VIRTUE AND VICE. But convenience dictated a separate treatment of each of these notions in order to avoid the excessive complexity and unwieldy length which would have re-

sulted from the number of topics and the volume of the references these chapters would have had to contain.

The number of chapters might also have been expanded, as, for example, by dividing *MEMORY AND IMAGINATION* into two chapters; or by breaking a large and complex chapter into a number of smaller ones. This might have been done in the case of *BEING*, by substituting chapters on existence, essence, substance reality. The reason which operated against such multiplication of chapters was (as already stated) the desire to avoid excessive duplication among topics and references.

To the extent that such pragmatic criteria or reasons of convenience were operative, the number 102 and the list of terms chosen as chapter titles are somewhat arbitrary. But this unavoidable arbitrariness does not affect the character of the terms selected as the great ideas of the western tradition. Their character would have been the same had the number been 92 or 112. It would have been the same had other words been used to express the same meaning —if, for example, “freedom” had been used instead of “liberty,” or “universe” instead of “world.” What is not arbitrary, in short, is the distinction between the character of the terms selected, and the character of those eliminated because they do not function as major centers or pivots of discussion in the great books.

ALL THE ELIMINATED TERMS, and many more, appear in the Inventory of Terms. The Inventory has 1798 entries, whereas the original list of possible terms numbered less than 1000. In analyzing the basic concepts, it was discovered that terms not thought of as candidates for primary treatment, had significance as subordinate concepts.

The composition of the Inventory of Terms tends to throw light on the character of the great ideas, and to confirm the distinction between primary and subordinate concepts. But it must first be observed that not all of the words that appear in the Inventory of Terms express subordinate concepts. Some, as we have already seen, are synonyms for the words chosen to express the great ideas; and some are words which, if not strictly synonyms, have a significance coordinate with that of the great ideas. Some have even more generic meaning than the chapter words, and some are chapter titles.

The concept of a republic or of republican government is, for example, coordinate with the idea of a constitution or of constitutional government; but the idea of *CONSTITUTION*, with its correlative notions of constitutional law and the principle of constitutionality, better served the purpose of analyzing this whole complex of notions as they appear in the great political and historical books of the western tradition. In other cases, a word which at first seems coordinate in meaning is found, on closer examination, to have less generality, at least so far as the great books are concerned. This is true of “becoming” as compared with “change,” “friendship” as compared with “love,” or “atom” as compared with “element.” In their greater amplitude, the chapters on *ELEMENT*, *LOVE*, and *CHANGE* provide places for adequate treatment of these subordinate concepts.

Certain terms which may at first appear coordinate with the 102 great ideas are actually more rather than less general in their significance. "Society" and "thought," for example, express concepts which require a number of chapters, in part or whole, for their adequate treatment. The entry under "thought" in the Inventory of Terms refers the reader to a large number of chapters, such as IDEA, JUDGMENT, LANGUAGE, MEMORY AND IMAGINATION, MIND, REASONING. The word "thought" is not only more general but also more indefinite; these chapters cover the discussion of thought in the more definite terms in which it occurs in the great books.

The situation with respect to "society" is not quite the same. The entry under "society" in the Inventory of Terms refers the reader to a number of chapters, of which two—FAMILY and STATE—deal with the two main types of society or community (*i.e.*, the domestic and the political). For the most part, the great books discuss the family and the state rather than the more generic notion of society or human association as such. For the most part, they do not discuss primitive societies which are strictly neither families nor states; and if they consider other types of association, such as economic corporations or religious communities, they do so in relation to the family or the state. The generic concept of society is treated fully at the generic level only in the comparatively recent literature of sociology and anthropology.

It should be clear from these two examples that words expressing concepts more generic than the great ideas, are relegated to the Inventory of Terms according to the same principle as that applied to words expressing subordinate concepts. In both cases the standard is set by the range and level of the discussion in the great books.

With a few exceptions, such as "thought" and "society" (which are more generic), or "republic" (which is coordinate), the vast majority of the words listed in the Inventory are subordinate terms. Many are words which actually appear in the phrasing of one or more of the topics under the great ideas; or they may be synonyms for these words. Some are words which are implied by the meaning of one or more topics. Such words and their synonyms are listed in the Inventory, as well as words verbally present in the topics.

AS THE 2987 TOPICS OF THE SYNTOPICON state the themes which are discussed under the great ideas, so the words listed in the Inventory represent the terms in which those themes are discussed. For both, the ultimate point of reference is, of course, the content of the great books and of the tradition they represent. Through the intermediation of the topics, the terms of the Inventory reflect the same principles of selection as do the great ideas. This accounts for differences between the Inventory of Terms and other basic word lists, such as Baldwin's *Dictionary of Philosophy and Psychology*, Lalande's *Vocabulaire technique et critique de la philosophie*, the general terms contained in the classified listing of articles in the *Encyclopaedia Britannica*, and the abstract titles under the classification of articles in the *Encyclopaedia of the Social Sciences*. All of these necessarily include technical terms

of highly specialized import in particular fields of inquiry. They also tend to reflect predominantly the state of knowledge and opinion in the 19th and 20th centuries—the latest developments of the tradition rather than the whole of it.

The Inventory of Terms consists mainly of words in common use. It is not the vocabulary of philosophy, science, or any other special study. It is the basic vocabulary of ordinary speech concerning ideas which belong not to the last century or to the present day, but to the collective, common wisdom of mankind. Though most of its words have currency in contemporary English speech, they also have currency in the thought of thirty centuries, no matter how they were verbally expressed, in a variety of languages, living and dead.

An entry in the Inventory of Terms usually consists of a term followed by an enumeration of the topics in which that term is a significant element. There are two exceptions to this procedure, which deserve comment.

For most of the terms listed, the relevant topics are cited in a single group in the alphabetical order of the chapters in which they appear. But for a certain number of terms, the topics are divided into two groups, each arranged alphabetically. In these cases, topics of immediate relevance are distinguished from those of remote relevance. The former state themes or issues in which the term under consideration is central to the discussion; the latter, those to which it tends to be peripheral.

The second exception is the citation of whole chapters in addition to individual topics from other chapters. When whole chapters are cited, they are placed first in the enumeration because all their topics are of maximum relevance to the term under consideration. The procedure of citing whole chapters was adopted initially in the construction of those entries which are the names of the great ideas themselves. It was extended to words which are synonyms for the chapter titles, and to a small number of other words which express terms of considerable magnitude.

The reason for the inclusion of the chapter names and their synonyms in the Inventory of Terms should be immediately apparent. Each of the great ideas is involved in the meaning of topics in other chapters. The fact that each of the great ideas is implicated in the analysis of many others shows the interconnection of the ideas, a point to which we shall return presently. It also helps to indicate the difference in magnitude—in topical range—between the great ideas and all subordinate notions.

In almost every case, the names of the great ideas (or their synonyms) have a greater number of topics cited for them in the Inventory of Terms than do other terms. This shows that they are the major terms in the tradition of western thought. They are the terms with the most varied and manifold significance, and with the greatest incidence in the discussion of important problems. It might almost be said that they are the unavoidable terms in the principal areas of discourse. That subordinate terms have a much more restricted topical range confirms the difference in discursive amplitude between them and the great ideas.

The reader can therefore verify for himself, by examining the Inventory of Terms, the difference between the great ideas and all other terms. He need only

compare the number and variety of topics cited for the great ideas and for all other terms. By the same criterion, he can also order all the other terms in the Inventory according to the degree to which they approach the great ideas in topical range. He would find that the class of terms which, by this test, most nearly approximated the great ideas, is not large—probably much less than one hundred of the 1798 terms in the Inventory. These would be the borderline terms—the few whose omission from the company of the great ideas might be disputed.

THE 102 CHAPTERS OF THE SYNTOPICON present the great ideas in alphabetical sequence. The Inventory of Terms is also alphabetically arranged, partly for convenient reference and partly to avoid the formulation of any rigid systematic order among the great ideas and their subordinate terms. Many systematic arrangements of these concepts are possible, and the adoption of any one of them would be prejudicial to the others. The alphabetical arrangement admits all possibilities, and conceals all alike. On the other hand, as we have just seen, the Inventory of Terms reveals as well as conceals the relation of the great ideas to one another, and of other terms to them. But the relationships revealed in the Inventory are not systematic in the sense of giving one idea or set of ideas logical priority over others.

The Inventory of Terms merely shows the subordination of one concept to another insofar as the one enters into the topics which express the content of the other. But this sort of relationship between two great ideas does not place them in a fixed systematic order, for each may be subordinate to the other; that is, each may be involved in the topics of the other. LIBERTY, for example, is involved in the topics of JUSTICE, and JUSTICE in the topics of LIBERTY; INFINITY is involved in the topics of SPACE, TIME, MATTER, and WORLD, and they in turn are involved in the topics of INFINITY.

Other types of relation among the great ideas are indicated in the Introductions and the Cross-References, which are, respectively, the first and fourth parts of each of the 102 chapters. Both of these parts of the Syntopicon are discussed at greater length subsequently in this Appendix. Here it is sufficient to point out that the interconnection of the great ideas which the Introductions and the Cross-References suggest, is an order no more systematic than that indicated by the Inventory of Terms.

The Cross-References in one chapter call the reader's attention to similar or related topics in other chapters. A particular Introduction usually refers the reader to other Introductions for a fuller consideration of certain matters, or for the exposition of affiliated points. That neither of these types of connection sets up a systematization of the ideas, is simply shown by the fact that neither places them in a unique logical order. The Introduction and the Cross-References merely show that one idea is related to a number of other ideas, without specifying the logical character of the connection. Without such specification, the network of connections set up by the Inventory of Terms, the Introductions, and the Cross-References cannot become a systematic order.

A systematic order of concepts belongs properly to the exposition of a doctrine. The tradition of western thought contains a variety of doctrines, many of them conflicting. Of these, certainly of the principal ones, the great books provide the best and fullest exposition; and their conflict appears most sharply whenever the voices in the great conversation engage in explicit controversy. *The Great Ideas*, as a syntopicon of the great books, must therefore avoid, so far as that is humanly possible, any trace of systematic order. In no other way could it present the whole tradition free of prejudicial coloring by any one of its parts. In no other way could it embrace every variety of position without the distortion that would necessarily follow from a stronger attachment to one than to others.

Detachment is the essence of a purely dialectical treatment of ideas, as opposed to the dogmatic exposition of a particular doctrine -dogmatic not in the sense of being without rational foundation or defense, but simply in the sense of being attached to some particular order of ideas in preference to all others. The explanations which follow, concerning the construction of the Outlines of Topics and the manner in which the Introductions were written, will offer further evidence of the dialectical detachment that was sought in every phase of this work, because it was necessary for carrying out the conception of the Syntopicon. That dialectical detachment is preserved by the alphabetical ordering of the great ideas insofar as it alike admits or conceals all possible orderings; and it is confirmed by the non-systematic character of the various connections among the great ideas, as these are indicated by the Inventory of Terms, the Cross-References, and the Introductions.

THESE CONNECTIONS, THOUGH NOT SYSTEMATIC, are neither haphazard nor insignificant. They point to various constellations of ideas which are the conceptual patterns of major fields of learning or inquiry.

Consider, for example, the interconnection of the ideas of GOVERNMENT, FAMILY, STATE, LAW, CONSTITUTION, DUTY, JUSTICE, LIBERTY, MAN, CITIZEN, SLAVERY, PUNISHMENT, WAR, and REVOLUTION; and of these with the ideas of particular forms of government, such as ARISTOCRACY, DEMOCRACY, MONARCHY, OLIGARCHY, and TYRANNY. These ideas have more complex and intimate relations with one another than any of them has with such ideas as ANIMAL, CHANCE, DEFINITION, EVOLUTION, MATTER, SENSE, SOUL, or WORLD. Their interconnection forms that constellation of concepts which characterizes the field of political thought, and distinguishes it from all other fields.

The interconnection of the ideas of LABOR, WEALTH, JUSTICE, LIBERTY, SLAVERY, FAMILY, STATE, REVOLUTION, WAR, and perhaps DEMOCRACY and OLIGARCHY, forms the constellation of concepts which characterizes the field of economic thought. To take a more sharply contrasting example, the interconnection of the ideas of GOD, MAN, IMMORTALITY, FATE, PROPHECY, SOUL, SIN, WORLD, RELIGION, and THEOLOGY, and the relation of these to such ideas as GOOD AND EVIL, DUTY, HAPPINESS, VIRTUE, LAW, and PUNISHMENT, constitute the conceptual pattern of religious thought.

In none of the preceding examples is the enumeration of ideas intended to be exhaustive. In each case, only the principal concepts are mentioned. But even if to these were added all the peripheral concepts—those having any appreciable degree of relevance to the subject matter—many of the great ideas would still be omitted from the constellation of concepts involved in a particular subject matter or field of inquiry. This indicates that every idea is not associated equally with every other. All belong together in the single intellectual firmament of western thought, but they also form separate sub-groups or constellations which delineate traditional subject matters.

Yet one may wonder whether every great idea is not in some way related to every other—if not directly, then at least through the mediation of other ideas. Some evidence on this point is afforded by the examples given above. Politics and economics have common ideational elements. The concepts of JUSTICE, LIBERTY, SLAVERY, FAMILY, STATE, REVOLUTION, WAR, DEMOCRACY, and OLIGARCHY are involved in both fields of thought. Politics and religion also have common ideational elements (*viz.*, MAN, DUTY, LAW, PUNISHMENT). By this measure they would seem to overlap less than do politics and economics. But whether they overlap more or less, it is through the relation of the various fields of inquiry to one another that each of the 102 great ideas has some degree of relevance to all the others.

At different times in the tradition of western thought, the major fields of inquiry or subject matter have been differently conceived, and either more broadly or more narrowly defined. According to different doctrines, the relation of the fields to one another—the order of the sciences, the general groundplan of learning—is differently construed. Hence it would be prejudicial and presumptuous to advance here a definitive formulation of concepts, central and peripheral, which separate or relate the traditional fields of inquiry, such as politics; ethics or morality; economics; religion and theology; metaphysics; physics, biology, or the philosophy of nature; psychology, anthropology, or the philosophy of man; epistemology or the theory of knowledge; history and the philosophy of history; the liberal arts of grammar, rhetoric, and logic; poetry and the philosophy of art.

By using the Syntopicon, the reader can discover for himself the grouping of the great ideas in the various patterns appropriate to distinct and related subject matters. In doing this he will be aided primarily by the Cross-References and the Introductions, and also to some extent by the Inventory of Terms. Instead of constraining him by dogmatically imposing one against any other construction of the fields of learning, the Syntopicon leaves the reader free to find, and even facilitates his finding, the various and often conflicting constructions that have been made in the tradition of the great books.

IT MAY BE OBSERVED THAT, OF THE VARIOUS FIELDS OF LEARNING named above, some are also names of great ideas, whereas others, which seem to be of equal importance, are not. This fact requires some explanation. It also raises the question whether the great ideas are all ideas in the same sense. Is the idea which signifies

a field of learning or a subject matter, such as mathematics, physics, or theology, the same sort of conception as the ideas which signify basic notions in that particular field? Is the chapter on **PHYSICS**, for example, on the same level with the chapters on **CHANGE**, **ELEMENT**, **MATTER**, **SPACE**, **TIME**?

Clearly there is a difference between these two orders of ideas. The conception of a science, a subject matter, or a field of inquiry, is obviously different from the conception of the objects or realities considered in that field. One of the basic problems throughout the tradition of western thought has been the division of human knowledge, the definition of the departments of learning, the nature and order of the arts and sciences. Hence, among the great ideas, certain ideas have developed in the course of thinking about this problem. They are conceptions of the nature of particular sciences or subject matters.

But not all subject matters which appear in the most recent classifications of the sciences are discussed at sufficient length in the great books to warrant their taking their place among the great ideas of the whole tradition. Psychology, for example, does not receive as much attention as physics, and so there is a chapter dealing with the conception of physics, but none dealing with the conception of psychology. Instead the consideration of psychology appears primarily as a group of topics in the chapters on **MAN** and **SOUL**. Grammar, likewise, does not receive the attention that logic and rhetoric do; accordingly, there are chapters dealing with the arts or sciences of logic and rhetoric, but none dealing with grammar. Instead grammar is considered in a group of topics in the chapter on **LANGUAGE**, and also occurs in the chapters on **LOGIC** and **RHETORIC**, in topics which treat the relation of grammar to these other arts.

By consulting the Inventory of Terms the reader will be able to discover in which chapters and under which topics consideration is given to the arts, sciences, or branches of learning whose names do not appear among the 102 chapter titles. It may be useful, however, to enumerate those chapters which deal with branches of learning or fields of inquiry. They are: **ASTRONOMY**, **DIALECTIC**, **HISTORY**, **LOGIC**, **MATHEMATICS**, **MECHANICS**, **MEDICINE**, **METAPHYSICS**, **PHILOSOPHY**, **PHYSICS**, **POETRY**, **RELIGION**, **SCIENCE**, and **THEOLOGY**.

With a few exceptions, each of these chapters is devoted entirely to the consideration of a discipline or subject matter—its definition, its scope, its principles, methods, and problems. The exceptions are the chapters on **ASTRONOMY**, **HISTORY**, **MECHANICS**, and **MEDICINE**, which are concerned *only in part* with various conceptions of the nature, principles, and methods of the disciplines named. In part they *also* include topics which state issues not *about* these sciences, but *within* them—issues about the objects studied in these sciences.

The chapter on **ASTRONOMY**, for example, includes discussions of celestial phenomena in general and of particular heavenly bodies; the chapter on **HISTORY** includes discussions of the processes and patterns of historical change; the chapter on **MEDICINE** includes discussions of the nature, causes, and classification of diseases and the general theory of health; and considerably more than half the chapter on **MECHANICS** deals with the basic notions in the science of mechanics, and the

concepts and problems of various branches of physical science. This part of the chapter on **MECHANICS** is (along with such chapters as **SPACE**, **TIME**, and **QUANTITY**) the complement of the chapter on **PHYSICS**, which concerns itself entirely with the character of physics as an experimental science and as a philosophy of nature.

The other chapters which are restricted to the consideration of the character and method of particular disciplines also have their complements. The chapters on **DEFINITION**, **HYPOTHESIS**, **IDEA**, **INDUCTION**, **JUDGMENT**, **OPPOSITION**, **PRINCIPLE**, and **REASONING**, for example, are complementary, in the sense indicated, to the chapter on **LOGIC**; the chapters on **INFINITY**, **QUANTITY**, **SPACE**, and **TIME** are complementary to the chapter on **MATHEMATICS**; and so on for each of the chapters which revolve around the nature and methods of a particular discipline.

That the chapters on **ASTRONOMY**, **HISTORY**, **MECHANICS**, and **MEDICINE** are treated somewhat differently from the rest (being mixed chapters rather than exclusively concerned with the idea of a science or of its subject matter), is explained in the same way as the fact that the sciences of economics and psychology are treated in topics subordinate to the ideas of **WEALTH** and **MAN**. On purely logical grounds, these disciplines or branches of learning may be considered as important as **ASTRONOMY**, **MECHANICS**, or **PHYSICS**, but as a matter of historic fact they have not been equally subjected to analysis, definition, and discussion in the tradition of western thought, especially when that is taken as a whole. All such differences in treatment reflect the actual content of the great books rather than any theory developed apart from the books or according to the bias of one period or phase of the tradition.

WE HAVE NOW SUFFICIENTLY EXPLAINED the selection of the 102 great ideas and their relation to one another and to the concepts enumerated in the Inventory of Terms. We have distinguished whatever was based, in the treatment of the ideas, on purely pragmatic considerations or reasons of convenience, from policies which were based on theoretic principles reflecting the conception of the Syntopicon itself. We have observed a number of differences among the great ideas: that all are not equally great, not equally complex in structure, or extensive in scope; that they vary in the range of subject matters to which they pertain or in the emphasis they receive in different periods or phases of the western tradition; that they are not all on the same level, some being concepts of the branches of human learning, others concepts of the objects of human inquiry.

One more point of difference among the great ideas remains to be mentioned. That is the difference between what might be called the "easy" and the "difficult" ideas. The measure of this difference is the number of distinct meanings which have been attached to the name of an idea in the tradition of the great books.

Two ideas represent the extremes between which all the rest vary. One extreme is the chapter on **IDEA**; it almost seems that no two of the great books which expound a theory of ideas use the word "idea" in the same sense. At the

other extreme is the chapter on PUNISHMENT; the authors of the great books may differ in their theories of the purpose or use of punishment, but they differ very little, if at all, on the meaning of the word "punishment."

In proportion to the degree of their systematic ambiguity, the great ideas are more or less difficult as subjects for syntopical treatment. The names of the great ideas, like other words, have systematic ambiguity when their various distinct meanings are related according to some principle. That the ambiguity be systematic is obviously indispensable to the unity of each chapter dealing with a great idea. To preserve the unity of a chapter, some intelligible relation must obtain among all the senses in which its principal term is used in the topical development of the idea. The unity of each chapter depends on the existence of a common thread underlying all the twists in meaning that its principal term undergoes.

Sheer equivocation—that is, the use of the principal term in two absolutely unrelated meanings—would divide the chapter into two parts, with no reason for their being together except a purely verbal identity, of accidental origin. Hence, in proportion as the word expressing an idea is more ambiguous, the danger is greater that the systematic ambiguity may verge upon sheer equivocation.

The handling of the systematic ambiguity itself, and the avoidance of sheer equivocation, are the two aspects of the semantic difficulty encountered in treating almost all of the great ideas, because of their manifold or complex significance. The solution of this difficulty—different in different chapters according to the precise nature of the semantic problem in each—was achieved by means of the topical subdivision of the great ideas. The order and relation of the topics made it possible to take care of the order and relation of the various meanings of the idea. A fuller statement of the way semantic difficulties were overcome in the construction of the Syntopicon belongs, therefore, to the next section of this essay, which deals with the Outlines of Topics.

II. THE OUTLINES OF TOPICS AND THE CROSS-REFERENCES

THE TOPICS ARE THE BASIC UNITS OF THE SYNTOPICON. They perform a double function. The Outline of Topics in each chapter is the analysis of a great idea, setting forth its various meanings, its themes and problems; and the individual topics serve as the immediate headings under which are assembled the references to the discussion of each particular subject in the great books. The topics are the major subdivisions of the discussion in the sphere of each of the great ideas, as the ideas are the main divisions of the whole discussion in the great books. As each idea represents a general field of discourse—a domain of learning and inquiry—covering a variety of related themes and problems, so, under each idea, the various topics represent the themes and problems which are the particular subjects of discussion in that field.

To understand how the topics perform these two functions—that of analyzing the ideas and that of providing headings for the references—it is necessary, first, to consider the nature and variety of the individual topics; and, second, to exam-

ine the structure of the Outlines of Topics in the light of the principles which determined the order of the topics, the selection of certain topics and the omission of others.

A topic is essentially a subject for discussion. The Greek word *topos* from which "topic" is derived literally means a *place*. Its literal meaning is retained in such English words as "topography" and "topology," which signify the study of physical or geometrical places. The conception of a topic as a subject for discussion is a metaphorical extension of this root meaning. A topic is a logical place; it is a place where minds meet to consider some common problem or theme.

The minds may agree or disagree; they may argue the matter from different points of view; they may contribute to the discussion in a variety of ways—by offering examples, by proposing definitions or hypotheses, by stating analyses or arguments, by debating what has already been said, or by advancing a new view. But whatever form each contribution takes, it must be relevant, though it need not be relevant in the same way or to the same degree. The various contributions are relevant to each other through their relevance to the common theme or problem, and this gives unity to the variety of things being said.

A topic, then, is a place where minds meet through being relevant to a common subject of discussion. It is a place at which an intelligible exchange of thought, insight, or opinion can occur. We recognize this when we refer to the topics of a conversation; and thereby we also acknowledge that a conversation, in order to be good, must have topics. The more conscious it is of its topics, the better a conversation is, the better it can sustain relevance as it shifts from theme to theme.

In this sense the conception of the Syntopicon is inseparable from the conception of the tradition of western thought as a single great conversation in which the best minds of every period and persuasion have participated. As the units of any good conversation are its topics, so the units of the great conversation are the 3000 topics under which the Syntopicon cites relevant discussion in the great books. If the notion of the great conversation had been a myth, the Syntopicon could not have been constructed at all. To say that these two volumes of *The Great Ideas* make possible a syntopical reading of the great books, is to say also that they bear witness to the actuality of the great conversation.

The traditional conception of a topic belongs to the logic of discussion—of dispute, controversy, or any other exchange of opinion among men. It is not necessary that every topic be disputed, for it to be true that every topic is necessarily disputable. Wherever a difference of opinion is possible, or wherever a variety of relevant views is conceivable, there a topic can be formulated, for there will be a meeting place for discussion. According to this understanding of the nature of a topic, the 3000 topics of the Syntopicon are the meeting places of western thought. They are not possible but actual topics. Discussion of each of them can be found in the tradition of the great books.

TO ACCORD WITH ITS LOGICAL FUNCTION, a topic must have a certain grammatical and, perhaps, even rhetorical form. For example, a topic is not a proposition. It

neither asserts nor denies anything. It is neither true nor false. It would be inappropriate, therefore, to state a topic in a declarative sentence.

If we consider the relation of law to liberty, we can assert, in a proposition, that the supremacy of law *is* the principle of political liberty; or we can deny this, if we say it *is not* the principle. But topic 7b in the chapter on LAW does neither, and permits both. This topic—"The supremacy of law as the principle of political liberty"—merely presents for consideration one traditional formulation of the relation of law to liberty.

It may be supposed that if a topic states a problem, it should be put in the form of a question. For example, LAW 7b might have been expressed thus: "Is the supremacy of law the principle of political liberty?" or "Whether the supremacy of law is the principle of political liberty?" But the interrogative form of statement is almost as restrictive as the declarative. It seems to call only for a Yes or No answer. If the issue were as simple as this, it might have been most explicitly expressed in the form of a dilemma: "*Either* the supremacy of law is the principle of political liberty *or* it is not." But a dilemma of this sort does not exhaust all the relevant possibilities. It is therefore a bad phrasing of the topic, and at the same time indicates what is wrong with the interrogative phrasing. It limits the topic to one question or one issue.

The topic concerning the relation of law to liberty raises more than one question. Its phrasing permits such questions as, "In what sense is the supremacy of law the principle of political liberty?" Furthermore, as phrased, the topic allows for more than an affirmation or a denial. It permits the expression of doubt on the subject; it permits the formulation to be entertained as an hypothesis for the purpose of seeing what consequences follow; it is open to a variety of explanations or reasons for thinking that the supremacy of law is or is not the principle of political liberty; it is even open to the adduction of examples—particular instances in history or fiction which show the dependence of political liberty upon the supremacy of law, or the opposite.

A topic, in short, must have greater amplitude than any other logical form of statement. The familiar grammatical forms of the declarative or interrogative sentence, or even the complex sentence which expresses a dilemma, are therefore inappropriate for the statement of topics. Since it must be able to include all these and more, the statement of a topic must be less determinate in verbal structure.

It is easier to say what a topic is not, than what it is or should be. If it must always be a less determinate expression than a sentence, and if it must usually be a more complex expression than a single word or pair of words (which are the verbal expression of terms, such as the great ideas), it would seem to follow that the proper expression of a topic is a phrase—often, perhaps, a fairly elaborate phrase involving a number of terms and signifying a number of possible relations between them. This general description of the grammatical form of a topic does not, however, convey an adequate notion of the extraordinary variety of possible phrasings.

An examination of the phraseology employed in the statement of the 3000 topics of the Syntopicon will reveal many types of topical statement. Some topics are simple and others complex; and of the complex topics, some involve two and some more than two component phrases, related as coordinate, as primary and secondary, or in some other way. For example, "The ideal of the educated man" (EDUCATION 1a) is a simple topic; "The right to property: the ownership of the means of production" (LABOR 7b) is a complex topic; and "The use and criticism of the intellectual tradition: the sifting of truth from error; the reaction against the authority of the past" (PROGRESS 6c) is a more complex topic. We shall return presently to the problem of the complex topic, and especially to the consideration of the relation of its parts.

For the moment, let us examine the various ways in which topics—simple or complex—are phrased. The following is a far from exhaustive sampling of the types of topical statement, but among the 3000 topics of the Syntopicon, there are many instances of each type.

COURAGE 1. The nature of courage

DIALECTIC 1. Definitions of dialectic

CHANCE 1. The conception of chance

GOVERNMENT 1c. The attributes of good government

MAN 1. Definitions of man: conceptions of the properties and qualities of human nature

PLEASURE AND PAIN 2. The causes of pleasure and pain

ART 7a. Art as a source of pleasure or delight

LABOR 3. The kinds of work and the relationship of different types of workers

MEDICINE 5b. The classification of diseases

HAPPINESS 2b(2) Pleasure and happiness

CAUSES 3 Causality and freedom

COURAGE 7c. Courage in war

HABIT 3c. Instinct in relation to reason

ARISTOCRACY 2. The relation of aristocracy to other forms of government

CUSTOM 1. The distinction between nature and convention: its application to the origin of the state and of language

CONSTITUTION 1. The difference between government by law and government by men: the nature of constitutional government

FAMILY 2b. Comparison of the domestic and political community in manner of government

JUSTICE 3. The duties of justice compared with the generosity of love and friendship

ART 11. Myths and theories concerning the origin of the arts

DEMOCRACY 5*b*. The theory of representation

GOVERNMENT 1. The general theory of government

EVOLUTION 4. The problem of evolution: the origin of plant and animal species

CHANGE 13. The problem of the eternity of motion or change

ELEMENT 5*b*. Arguments for and against the existence of atoms: the issue concerning the infinite divisibility of matter

POETRY 9*b*. The issue concerning the censorship of poetry

OPINION 5*b*. Advantages and disadvantages of freedom of discussion

EDUCATION 8*b*. The economic support of educational institutions

EXPERIENCE 6*b*. The role of experience in politics: the lessons of history

The foregoing examples illustrate various forms topics take according to the different kinds of subjects they propose for discussion. Some deal with the nature of a thing or its definition, some with its qualities or attributes, some with its causes, and some with its kinds; some deal with distinctions or differences, and some with comparisons or contrasts; some propose a general theory for consideration, some present a problem, and some state an issue. Some—such as the last three above—are difficult to characterize by any formula. The reason for all these types of topical statement— and others not illustrated in the examples given— cannot be explained without reference to the Outline of Topics as a whole.

In the Outline of Topics for each chapter, many different kinds of topics are necessary to cover the whole field of discussion represented by a great idea. Thus, for example, a topic like **COURAGE 1**—“The nature of courage”—will occur in many chapters, for many chapters open with a consideration of the nature of the thing signified by their principal term. A topic like **ARISTOCRACY 2**—“The relation of aristocracy to other forms of government”—will appear frequently, for the discussion of the principal term usually involves the consideration of its relation to other terms; a topic like **EMOTION 2**, “The classification and enumeration of the emotions,” or **LABOR 3**, “The kinds of work and the relationship of different types of workers,” will often occupy a place in an Outline of Topics because the classification or enumeration of kinds is a matter considered in many fields of inquiry or discussion. The same can be said for the topics which state theories, problems, issues, definitions, attributes, distinctions, comparisons, and so on.

Under a great idea, many different kinds of subjects are discussed, and these are represented by the various topics set forth in the Outline of Topics for each of the great ideas. It is not surprising that the discussion of one idea should re-

semble, in many respects, the discussion of another; hence we should not be surprised to find a certain sort of topic in chapter after chapter. Some kinds of topics will, of course, appear more frequently than others; some chapters will have a much greater variety of topics than others.

THE TOPICS NOT ONLY VARY IN TYPE according to their subject matter; they also vary in scope or amplitude according to the broadness or narrowness of the theme they enunciate. Some are open to every type of discussion, whereas others seem to impose certain restrictions upon the type of discussion that would be relevant. A topic like "Arguments for and against the existence of atoms" specifically calls for arguments. In contrast, a topic like "The issue concerning the censorship of poetry" permits, in addition to arguments for or against censorship, discussions of the issue itself, dealing, perhaps, with its significance, its presuppositions or implications, and its relation to issues concerning the censorship of other forms of expression. Even broader or more open in this respect are such topics as "The difference between government by law and government by men" or "Art as a source of pleasure or delight."

In terms of what a topic purports to be, every topic should have a certain minimum amplitude. It should solicit and allow the expression of opposite opinions on whatever is the subject of discussion. Whether the topic happens to be stated positively or negatively, it should cover both negations and affirmations of the point in question. It may have greater amplitude than this, but this much at least it should have. Since a topic is a meeting place for minds that disagree or differ, it is defective if its wording suggests one point of view or one position on an issue where many are possible, or where opposite arguments or views are known to exist.

What has just been said applies to topics generally, as statements having a certain logical character. But because they are intended to function as the commonplaces of the great conversation, the topics of the Syntopicon should have scope or range of another sort, in addition to logical amplitude. Ideally, they should be so conceived and so phrased that each topic is able to solicit or to cover contributions from the whole range of authors and works included in *Great Books of the Western World*, and from the books of the Bible as well. This means that the ideal topic is one which is open to contributions from the poets and historians as well as the scientists, philosophers, and theologians; which can cover every variety of doctrine or opinion that has been expressed in the tradition of the great books; and which is equally receptive to the imagination and thought of ancient, mediaeval, and modern times.

These are difficult requirements to meet. They demand a comprehensiveness difficult to achieve without falling into a vagueness which would render the topic useless or unintelligible. They demand, in the formulation of the topic, an almost perfect impartiality on the level of thought, and neutrality on the level of language. The more various and opposed the partisan views a topic tries to cover, the more difficult it is for the topic to be conceived impartially, that is, without

prejudice to any of these views, so that it seems to be formulated as if from *no* point of view. The more diverse and incompatible the terminologies in which the opinions to be covered are expressed, the more difficult it is for the topic to be worded neutrally, that is, without verbal coloration from one or another of the many vocabularies that have been used for the expression of relevant opinions.

In view of such difficulties, it could hardly be expected that the ideal would be realized in the formulation of every one of the 3000 topics in the Syntopicon. Yet it is realized in many and approximated in a fairly large proportion of the rest. Those which fall short of the ideal seem to be of two main types.

(1) Some topics are so conceived and phrased that their coverage is restricted to analytical or argumentative discussions—discussions of the sort which are to be found in expository works of science, philosophy, and theology, or in the discursive passages of poetry and history, whether in the speeches of historical or fictional personages or in the comments of the poets or historians themselves. The conception and wording of the topic tends to exclude exemplary or imaginative material, of the sort to be found in the narrative passages of history or fiction; or in other instances, the topic tends to exclude material of purely illustrative significance, such as reports of experiments in scientific books. These topics fall short of the comprehensiveness of the ideal topic by virtue of the type of material they reject.

(2) Some topics are so conceived and phrased that their coverage is restricted to the doctrines, theories, or opinions of one part, period, or phase of the whole tradition. The limitation on the range of materials which are admissible under such topics may be more or less stringent. Least restricted are those topics which fail to comprehend both pagan and Christian literature, because they are so conceived and worded that they apply to one or the other but not both of these two major phases of the western tradition. More restricted are those topics so conceived and worded as to apply only to a certain group of authors sharing a common doctrine or vocabulary. Most restricted are the topics which cover the thought of a single author. The last represents the extreme opposite of the ideal topics which cover the thought and imagination of every period and every variety of doctrine or opinion, no matter how they may be verbally expressed. But all three of these defective topics fall short of the ideal by virtue of their acknowledged failure to be impartial in thought or neutral in phrasing.

THE SECOND OF THE TWO MAIN TYPES OF DEFECTIVE TOPICS fails to perform the logical function of a topic, and also fails to do what the topics were normally intended to do in the construction of the Syntopicon. Logically, a topic should be hospitable to differences of opinion or opposite views on the same subject. If, for example, there are two or more contrary views on a given subject, it should be possible to formulate a topic which indicates the subject of the controversy in a manner that is impartial to all sides. But this was not always possible, because of difficulties inherent in the materials to be covered. It sometimes became necessary, in constructing topics appropriate to the content of the great books, to state con-

trary views in a *set of topics*, each worded to fit the particular view it represents. This *set of topics* then performed the logical function which, ideally, a single topic should perform; and from the point of view of the Syntopicon, the set of topics provided the remedy in all those instances in which logically defective single topics seemed to be unavoidable. It had the requisite comprehensiveness for a syntopical reading of the great books.

Before we examine the remedy, it may be useful to examine the reason it was necessary. The authors of the great books tend to have special vocabularies. This has little to do with the diversity of the languages in which they originally wrote; it is rather the result of the diverse *terminologies* they use to express their thought. This is as apparent in English translations of their works as it is in their original languages.

The more inventive and fecund a great mind is, the more it will shape the language it uses to fit its thought. To express a new idea or insight, a new word is invented or an old word given a novel meaning. Sometimes in the development of his own characteristic vocabulary, a great writer uses a new word for an old idea which he has appropriated and assimilated to his own thought. Sometimes the opposite occurs; the traditional word is appropriated or borrowed, but the idea which it long expressed is replaced either by a totally new, or at least by a variant, conception.

It can be said without exaggeration that no two authors of the great books have identical vocabularies. This does not mean that they share no common terms—identical words with identical meanings. On the contrary, even those who seem to be most divided by the differences in their terminologies give evidence of belonging to the same tradition by their common acceptance of a large number of terms. Yet, from the extreme at which they share a minimum number of important terms to the extreme at which their basic vocabularies are much more alike than different, this much can be said of *any two authors of the great books*: first, that they use some words in the same way and some differently; and second, that, when they use words differently, they are either expressing the same thought in different words or are using the same word to express wholly or partially different notions.

These facts do not make it impossible for the tradition of the great books to have the qualities of a good conversation. But the necessity of shifting from the vocabulary of one to the vocabulary of another makes it difficult, often extremely difficult, to discover and point out when the authors are talking about the same idea, and in what way their remarks are relevant to the same theme. These are the semantic difficulties which the Syntopicon had to overcome in order to reveal and record the existence of the great conversation.

FOR THE MOST PART DIFFERENCES IN TERMINOLOGY do not make it impossible for topics to cover all authors who make some contribution to the discussion of a particular theme. Even though they do not all use the same word to express their thought, or do not attach the same meanings to the words they use in com-

mon, it is usually possible to find a neutral phrasing for the topic. If the relevant authors use the same words with different—but *related*—meanings, the language of the topic will have the systematic ambiguity necessary to cover these variations. If the relevant authors do not all use the same words to express their thought, but use words which are closely related in meaning, then it may still be possible to find a neutral phrasing for the topic.

This may be achieved by formulating the topic in the words of ordinary discourse, words which are not specially characteristic of any of the authors. Another method is to phrase the topic in the words used by one author or group of authors. This can be done without prejudice to the thought of the others when the key words in the distinct vocabularies of the several authors are related as synonyms. It may even be possible to use synonyms in the phrasing of the topic, to represent the vocabularies of different authors. By any of these methods, the wording of the topic can be given sufficient systematic ambiguity to carry all the related meanings.

Sometimes, however, the meanings which different authors attach to the same word are *not closely related*; sometimes an author has coined words to express his meaning, or given certain words or phrases the stamp of his own doctrine; sometimes the words used by an author have overtones or systematic implications which make it impossible to find synonyms for them in the language of other authors or in the vocabulary of ordinary speech. In all these cases, a single topic to cover all the authors concerned would require phrasing so vague or so general that it could not contribute anything to the analysis of the idea under which it occurred. Such semantic difficulties were usually solved by the construction of a *set of topics*, each phrased in the language characteristic of particular authors or groups of authors. The unity of the set was indicated by a topic which served as the heading under which the particular topics were assembled. For the purpose of stating this unity, a vague or general phrasing of the heading was satisfactory, since the content of the discussion could be sufficiently indicated by the more explicit phrasing of the subordinate topics.

For example, in the Outline of Topics for the idea of DIALECTIC, four topics state four distinct theories of the nature of dialectic. The heading for the group of topics—"2. Diverse theories of dialectic"—merely indicates that the subordinate topics state the different conceptions to be found in the tradition of the great books. The four topics are phrased in a manner appropriate, respectively, to the thought of Plato, Aristotle, Kant, and Hegel and Marx.

- 2a. Dialectic as the pursuit of truth and the contemplation of being
- 2b. Dialectic as the method of inquiry, argument, and criticism in the sphere of opinion
- 2c. Dialectic as the logic of semblance and as the critique of the illusory employment of reason beyond experience
- 2d. Dialectic as the evolution of spirit or matter

The use of the words "or matter" in topic 2d shows how a single topic can be so phrased as to cover the thought of authors whose positions have a certain affinity even though they disagree as much as do Hegel and Marx. For both Hegel and Marx, dialectic is an evolution. Phrasing the rest of the topic in the alternative (*viz.*, "of spirit or matter") enables it to associate under one heading the Hegelian conception of the dialectic of spirit and the dialectical materialism of Marx.

Another example can be found in the chapter on *IDEA*. Here the six topics which appear under the general heading—"1. Doctrines of idea"—represent phrasings appropriate to groups of authors or to single authors. The six topics are:

- 1a. Ideas, or relations between ideas, as objects of thought or knowledge: the ideas as eternal forms
- 1b. Ideas or conceptions as that by which the mind thinks or knows
- 1c. Ideas as the data of sense-experience or their residues
- 1d. Ideas as the pure concepts of reason: regulative principles
- 1e. Ideas in the order of supra-human intelligence or spirit: the eternal exemplars and archetypes; the modes of the divine mind
- 1f. Idea as the unity of determinate existence and concept: the Absolute Idea

Again it can be pointed out that the wording of topics 1a and 1e permits the association of authors whose doctrines are affiliated even though they do not agree—Plato with Locke in the case of topic 1a; Spinoza with Aquinas and Augustine in the case of 1e.

Sometimes, however, a topic that is restricted to the doctrine of one author may have to be introduced into a set of topics, all the rest of which have general or unrestricted range. This happens most frequently when a particular author makes a contribution to the conversation, which no one else anticipates or echoes. Thus, in the chapter on *MEMORY AND IMAGINATION*, under the heading of a general topic, a specially phrased subordinate topic had to be introduced for the contribution of Freud. The general topic was "8. The nature and causes of dreaming"; the subordinate was "8d(1) The manifest and latent content of dreams: the dream-work."

In the chapter on *LABOR*, under the general heading "7. Economic and political justice to the laborer," a subordinate topic, specially phrased, had to be introduced for the contribution of Marx: "7c(3) The proletariat as a revolutionary class: its revolutionary aims."

In the chapter on *BEING*, under the general heading "7b. The distinction between substance and attribute, accident or modification, independent and dependent being," a specially phrased subordinate topic had to be introduced for the contribution of Descartes and Spinoza: "7b(4) Extension and thought as dependent substances or as attributes of infinite substance."

These restricted or doctrinal topics are *exceptions* to the rule. Most topics have a neutral phrasing and a systematic ambiguity which permit them to comprehend the whole tradition and all differences in doctrine or opinion. The great majority are topics like "The happiness of the individual in relation to the happiness or good of other men" (HAPPINESS 5a), or "Chance, necessity, and design or purpose in the origin and structure of the world" (CHANCE 3), or "The political regulation and censorship of education" (EDUCATION 8c). Topics of this sort contain no words prejudicial to the thought of any author, and impartially cover every variety of relevant opinion in the whole tradition of western thought, no matter how violently the opinions may differ.

In short, the topical ideals of comprehensiveness and impartiality were achieved in the Syntopicon either by single topics or by sets of topics which comprehended the dialectical development of a concept or an issue in western thought. The rule followed was to employ single topics wherever they could be constructed, and to construct a set of doctrinal topics, or to introduce a doctrinal topic into the context of others, *only when the semantic difficulties could not be otherwise surmounted*.

TO FOLLOW THE RULE OF USING SINGLE TOPICS wherever they could be constructed, and to approach the ideal of making them as comprehensive as possible, it was sometimes both necessary and desirable to formulate a complex rather than a simple topic.

Examples of these two kinds of topics have already been given. The most obvious distinction between them can be most precisely stated in grammatical terms. The simple topic is undivided; its elements are words, all of which belong to the same phrase. The complex topic is divided; its divisions are indicated by two kinds of punctuation. A colon divides the complex topic into its two main parts. The first of these two parts is usually undivided, but the second may be divided into two or more subordinate parts by semi-colons. The two main parts of a complex topic are always separate phrases; when the second of these is divided, its parts are usually separate phrases.

From this grammatical description of the complex topic, it might be inferred that, considered logically, it is always a union of two or more simple topics, each expressed by separate phrases. But this is not always the case. Complex topics seem to fall into three principal types, and their differences must be examined in order for their several distinct functions to be understood.

(1) Sometimes the phrase following the colon does not represent a separate topic, but merely makes the meaning of the phrase preceding the colon clearer in some way—by expanding it, by specifying it, even by illustrating it. The colon, separating the first phrase from the one or more phrases which follow, is roughly equivalent in meaning to the words "that is to say" or "such as." The first type of complex topic is, therefore, only grammatically, not logically, complex, and cannot be broken up into two or more separate topics.

The following examples illustrate the first type of complex topic:

HISTORY 4b. The laws and patterns of historical change: cycles, progress, evolution

CITIZEN 8. The idea of world citizenship: the political brotherhood of man

EDUCATION 2. The kinds of education: physical, moral, liberal, professional, religious

CONSTITUTION 7b. The safeguards of constitutional government: bills of rights; separation of powers; impeachment

JUSTICE 2. The precepts of justice: doing good, harming no one, rendering to each his own, treating equals equally

EXPERIENCE 7. Mystical or religious experience: experience of the supernatural

EVOLUTION 4c. The origin of new forms of life: special creation, spontaneous generation, or descent with modification from older forms

SIGN 2a. The first and second imposition of words: names signifying things and names signifying names

(2) In the second type, the separate phrases of a complex topic represent the phrasing of the same topic or related topics in a manner appropriate to different authors. In some cases, the difference between the first and second phrasing is largely verbal; it is almost as if the *same* topic were being phrased in parallel ways. In other cases, the difference is doctrinal as well as verbal. Here the phrase which precedes and the phrase which follows the colon express more or less distinct topics which are like two closely related doctrinal topics. Clearly it is only in the second case that the complex topic could have been broken into two separate topics.

The following examples illustrate the second type of complex topic. (In these illustrations, the authority for the doctrine is indicated in parentheses.)

JUDGMENT 8b. Analytic and synthetic judgments (*Kant*): trifling and instructive propositions (*Locke*)

SOUL 2b. The order, connection, and interdependence of the parts of the soul (*Plato, Aristotle, Aquinas*): the id, ego, and super-ego in the structure of the psyche (*Freud*)

SENSE 3d(3) The estimative or cogitative power (*Aquinas*): instinctive recognition of the harmful and beneficial (*Darwin, Freud*)

QUALITY 2b. Primary and secondary qualities (*Locke*): the related distinction of proper and common sensibles (*Aristotle*)

Of the foregoing examples, JUDGMENT 8b illustrates a grammatically complex topic which is logically simple; the two doctrinal phrasings are parallel phrasings

of the same topic. On the other hand, SOUL 2b illustrates a logically complex topic, the two parts of which are distinct topics, and represent related doctrines in the theory of soul.

In some instances, the topic which precedes the colon is generally phrased, while that which follows is the same topic phrased in the language of a particular doctrine. For example:

FAMILY 7d. The emotional impact of family life upon the child: the domestic triangle; the symbolic roles of father and mother (*Freud*)

In some instances, what follows the colon is itself divided into subordinate parts by a semi-colon. These subordinate parts may be related as two parallel doctrinal topics. For example:

SENSE 3c(4) The distinction between sensation and perception (*James*): the accidental sensible (*Aristotle*); complex ideas of substance (*Locke*)

(3) In the third type, the separate phrases of a complex topic represent distinct but related topics. Here the related topics are all phrased in the language of common speech. They do not express the doctrines of particular authors or groups of authors. These topics are all logically as well as grammatically complex; in every case they could have been broken up into separate topics, though in many instances, giving them independent status would have necessitated a more explicit or elaborate phrasing of each. The union of these potentially independent topics into a single complex topic is justified by the logical relation between the parts. They are related aspects of a problem or issue; or they are related points in the discussion of a theme which is itself complex. Sometimes the parts are logically coordinate, in which case the topic preceding and the topic following the colon have equal weight; neither restricts the meaning of the other. Sometimes the parts are not coordinate; the one or more topics following the colon are logically subordinate to the one preceding it, in which case the primary topic controls and limits the meaning of the subordinate parts.

The following examples illustrate the third type of complex topic with *coordinate* parts.

EVOLUTION 5b. Competition in mating; sexual selection

INFINITY 4b. The infinite divisibility of matter: the issue concerning atoms

SCIENCE 6b. The place of science in society: the social conditions favorable to the advancement of science

JUSTICE 9f. Justice between states: the problem of right and might in the making of war and peace

The following examples illustrate the third type of complex topic which has a first or *primary* topic followed by one or more *subordinate* topics.

STATE 2c. The source or principle of the state's sovereignty: the sovereignty of the prince; the sovereignty of the people

SPACE 2c. Space as a medium of physical action: the ether and action-at-a-distance; the phenomena of gravitation, radiation, and electricity

PHYSICS 4b. Experimental discovery: inductive generalization from experiment; the role of theory or hypothesis in experimentation

MEDICINE 1. The profession of medicine, its aims and obligations: the relation of physician to patient; the place of the physician in society

IN A WHOLE OUTLINE OF TOPICS, distinct topics are logically related in two ways: they are either coordinate, or one is subordinate and the other is its supraordinate. This is clearly parallel to the two sorts of relation between the principal parts in a complex topic of the third type. It is reasonable, therefore, to ask why certain topics which are logically coordinate or logically supraordinate and subordinate should be related in these ways as separate topics; whereas other topics which have the same logical relationships to one another should be related as the parts of a single complex topic.

In differentiating between topics to be given independent status and topics to be united into a single complex topic, two principles were followed. The first was the principle of comprehensiveness. A number of related topics were united into a single complex one when their union seemed to be required for a comprehensive discussion of the matter under consideration. The discussion each would have covered, if it had been left as an independent topic, would have been fragmentary or partial. The decision to unite topics was never made in the abstract, but always in terms of the content of the great books, that is, in terms of how their various contributions to the discussion could be most perspicuously organized. In short, related topics were united to form a complex topic when the coverage of the complex topic more nearly approximated the syntopical ideal than the simple topics would have, had each been treated as independent.

The second principle involved the ideals of simplicity and unity, and thus acted as a check to the first principle. If two simple topics were sufficiently comprehensive in their coverage, then, even though logically related, they were given independent status, on the ground that simple topics have greater unity than can be achieved by the union of separate topics, no matter how closely related. The greater the unity of a topic, the greater can be the mutual relevance of the contributions to the discussion it covers.

This second principle worked automatically when two logically related topics were themselves complex. Complex topics were always made independent. But when the problem was whether certain simple topics should remain independent or be united, the two principles of comprehensiveness and simplicity had to be applied with discretion, sometimes in favor of comprehensiveness, and sometimes in favor of unity. It is impossible to state all the reasons of convenience or

policy which operated in such decisions, or to report how particular judgments were made. That such decisions could not always be made with certainty or by rule of thumb, is indicated by the fact that, during the construction of the Syntopicon, many topics which were independent at one stage of the work were later merged, and complex topics were frequently broken into a number of simple ones.

The final product of all these working judgments is manifest in the structure of the Outline of Topics for each of the great ideas. The numbering of the topics in each Outline indicates which topics are related as coordinate and which are related as supraordinate and subordinate.² But it is not always possible to tell from its grammatical form whether a given topic is simple or complex, since, as we have seen, some grammatically complex topics are logically simple. Nor is it always possible to tell at once whether a logically complex topic is of the second or third type; or, if of the third type, whether its parts are coordinate or supraordinate and subordinate. Sometimes this will be obvious from the wording or construction of the topic; but often it will be discoverable only after the discussion it covers has been read and studied.

A NUMBER OF OTHER POINTS concerning the structure of the Outlines of Topics call for brief comment.

(1) *The relation of supraordinate and subordinate topics.* The subordinate topics usually represent an analytical development of the theme or problem stated in the supraordinate topic under which they appear. They indicate particular points in the general area of discussion defined by the supraordinate topic. As it covers the whole, they cover the related parts of the whole. Sometimes, however, the subordinate topics represent a set of doctrinal alternatives rather than an analytical development of connected points under the supraordinate. Examples of this have already been given (see pp. 1241-1242).

In the first case, the supraordinate may function as a topic in its own right in addition to serving as a general heading for subordinates. When it functions as a topic, it usually covers a discussion of the whole or general theme, whereas the subordinate topics cover discussions of the parts or particular points. In rare instances, the supraordinate topic introduces a special point of its own, in addition to stating the general theme which the subordinates particularize. But in the second case, that is, when the subordinate topics state a set of doctrinal alternatives, the supraordinate serves merely as a general heading.³

²Topics numbered 1, 2, 3, etc. are primary and coordinate with one another. Any of these may be supraordinate, in which case topic 2 will have under it subordinate topics numbered 2a, 2b, 2c, etc., and these subordinates will be coordinate with one another. Any of these subordinate topics may, in turn, be supraordinate with respect to its own set of subordinates, in which case topic 2c will have under it subordinate topics numbered 2c(1), 2c(2), etc. Primary and secondary topics may or may not have subordinates; but topics of the order 2c(1), 2c(2), etc. never have subordinates.

³The above summary of the relation of supraordinate and subordinate topics applies to the relation between primary and secondary topics (e.g., between topic 3 and topics 3a, 3b, 3c, etc.) and also to the relation between secondary and tertiary topics (e.g., between topic 3b and topics 3b(1), 3b(2), etc.)

(2) *The analytical order of the Outline of Topics as a whole.* The primary topics (*i.e.*, topics 1, 2, 3, etc.) are coordinate in rank; but among these coordinates, certain kinds of topics normally tend to precede others in the Outline. The discussion usually opens with a consideration of the meaning of the idea or of the various ways in which the idea is defined or conceived. Almost as frequently the opening topic deals with the nature of the thing signified by the idea, or proposes the most general theory or theories in which the idea is involved.

The immediately following topics are usually concerned with the principal divisions or classifications of the idea or the thing it signifies (*i.e.*, its kinds, types, or modes); or with its causes or conditions, and with its relation to other ideas or things, frequently stated in terms of comparisons or contrasts. In some instances, this second group of topics deals with the main problems or issues raised by the idea; in some instances, topics of this sort follow the consideration of kinds, causes, and relations.

The concluding topics usually deal with the significance of the idea in fields of learning and inquiry other than the field in which the idea is a *principal* term or concept; or they may deal with the problems or issues raised by the idea in these other fields. In any case, concluding topics of this character cover phases of the discussion which are plainly subsidiary to the matters dealt with in the opening and middle topics.

In chapters on ideas which are susceptible to such discussion, the final topic may be concerned with historical considerations or may provide a place for the collection of illustrative materials.

(3) *Variations in the structure of the Outlines of Topics.* The statements made in (2) above are intended to describe the normal or typical order of the primary topics. But of the 102 Outlines of Topics, no two are exactly alike in structure or order of development. Not all, for example, open or close with topics of the sort indicated; nor do all contain the same variety of intermediate topics or dispose them in the same order.

The Outlines vary in a number of other respects. They differ strikingly in length, or number of topics, ranging from the chapter on FATE with only 6 topics, to the chapter on MIND with 76 topics. They differ almost as much in their analytical detail or the complexity of their structure: some chapters have only primary topics or very few subordinates; whereas in other chapters almost every primary topic covers a set of subordinates, and many of these in turn have subordinate topics of their own. The chapters on FATE or COURAGE, for example, have extremely simple Outlines; those on MIND or STATE, extremely complex ones.

The Outlines also differ in regard to the presence or absence of sets of specialized doctrinal topics. Chapters like PUNISHMENT and EDUCATION, in which the principal term has a common core of meaning throughout the great books, are not embarrassed by semantic difficulties and so do not need to resort to doctrinal topics stated in the language of different authors; whereas chapters like IDEA and

MIND, beset by semantic difficulties, require topics which specify the various senses in which the principal term is used by different authors or groups of authors.

Not only in this last respect, but also with regard to their differences in complexity, length, and the order of their topics, the Outlines vary with the character of the great ideas they articulate and analyze. As each idea is different from all the rest, so is each Outline of Topics. Each was constructed and written to fit the idea—not the idea by itself, but as it has been treated and discussed in the great books.

THE POINT JUST MADE EXPLAINS WHY these 2987 topics were selected—no more, no fewer, and no others—and why they were ordered as they appear in the Outlines. It is like the explanation why just these 102 terms were chosen as the great ideas. Yet if the explanation is understood to mean that the Outlines of Topics were entirely fitted to the great books, it is only partly understood. This would ignore another factor which shaped the Outlines and ordered the topics, even if it did not greatly affect the selection of the individual topics and their phrasing. That other factor was the consideration of purely logical criteria in constructing the Outlines. To the extent that such logical considerations prevailed, the content of the great books was also fitted into the Outlines of Topics.

Logical considerations did not always prevail. The Outlines of Topics assume the form of analyses, but as analyses many of them have logical flaws or deficiencies. Certain topics call attention to the absence of others which would be included in a logically rounded analysis of the idea. Certain topics seem to be given greater prominence than they would deserve in a logically balanced analysis; and certain topics are treated with greater analytical refinement than others which logically deserve the same treatment. In addition, the actual order of topics often only approximates the ideal analytical order, and sometimes even definitely departs from it.

These defects, both logical and substantive, in the Outlines of Topics are all consequences of the same fundamental fact. The Outlines do not represent analyses of the great ideas considered abstractly or in themselves. It might almost be said that they are not analyses of the ideas at all, but rather of the *discussion* of the ideas in the great books. That statement, however, would be too extreme. Though the selection of certain topics and the omission of others were wholly determined by the content of the great books, the order of the topics selected, the choice of the primary topics, and the weight or importance given to certain topics were determined partly by the content of the great books and partly by standards of logical precision in the construction of a rounded and balanced analysis.

The Outlines of Topics, therefore, represent an attempt to reconcile the demands of logic with fidelity to the syntopical aim of exhibiting the great conversation in all its strength and weakness. The actual process by which the Outlines of Topics were progressively formed over a period of seven years reflects the tension between these two interests, even as the final product reflects their joint influence.

The first drafts of the Outlines of Topics were largely *a priori*. They were logical

analyses of the ideas, formulated prior to any effort to use the topics as headings for collecting references to the great books. Yet even these first drafts were not entirely *a priori*; they were constructed in the light of considerable knowledge of the tradition of western thought. To this extent they were *a posteriori*, that is, empirical or historical rather than purely logical.

These original drafts were repeatedly revised in the effort to use each topic as a heading for a segment of the discussion. Topics were discarded; new topics were added; certain topics were merged and others were subdivided; a very large proportion of the topics were rephrased again and again; and the Outlines as wholes were reshaped whenever substantive alterations in their component parts necessitated logical reorganization or refinement. In this process almost all the Outlines went through many drafts. At the same time each Outline was scrutinized as a whole for its intelligibility as an articulation, and its rationality as an organization, of the whole discussion of a great idea.

The absence of certain concepts of contemporary importance from the list of the great ideas can be interpreted to mean that those concepts have only recently risen to a prominence they do not have in the tradition as a whole. The absence of certain topics from the Outlines can be similarly interpreted. The omitted topics cover discussions of recent origin, or discussions which, though they may have antecedents in an earlier day, do not receive as much attention in the great books as they currently attract. In marking the points on which the great books are silent, these absent topics point to contributions to the great conversation made in our time, as well as to *lacunae* in our intellectual heritage.

On the other hand, the Outlines contain a number of topics which elicit from the great books contributions that are slight in number and variety. In certain instances, the presence of these topics reflects the effort to make the Outlines as analytically rounded and balanced as the content of the books would permit. But in other cases, the retention of topics in spite of the slightness of the discussion they cover serves to record the antecedents in the tradition of themes or problems which have become dominant only in our own day.

ONE FINAL POINT ABOUT THE OUTLINES REMAINS TO BE MADE. They often contain topics which resemble one another in the matters they propose for discussion. This is seldom if ever true of the primary topics. The overlapping occurs mainly among the subordinates, and in the interest of analytical refinement or balance. In the analytical breakdown of two primary topics, similar points are often logically relevant. In consequence, similar topics will appear in the two sets of subordinates. If, in order to avoid the duplication, one of these subordinate topics had been omitted, one of the supraordinates would have been left incompletely analyzed and articulated.

For example, in the chapter on Law, under the general heading of topic 4—"The natural law"—one of the subordinates is topic 4f: "The relation of natural law to civil or municipal law; the state of nature and the regulations of the civil state." In the same chapter, under the general heading of topic 7—"Law and the

state"—one of the subordinates is topic 7c: "The priority of natural to civil law: the inviolability or inalienability of natural rights." The two topics are by no means identical, yet they do have much in common. Each proposes a theme that is logically appropriate in the analysis of the general heading under which it falls. The decision to include both represents the judgment that the inclusion of partially overlapping topics is a much less serious fault than the logical defect which would result from the exclusion of one of them in order to avoid duplication.

The policy which permitted overlapping topics in the same chapter for reasons of analytical completeness had even greater justification in the case of different chapters. The great ideas are so related that it would be impossible to construct analytically adequate Outlines of Topics without some topics under one idea resembling some topics under other ideas. In the same chapter, the resemblance between topics is never more than a similarity—a partial overlapping. But between chapters, the overlapping may be almost complete. The topics may be identical, except for a slight difference in phrasing. For example, the chapter on *LAW* necessarily includes topic 7b—"The supremacy of law as the principle of political freedom"—under the general heading of topic 7: "Law and the state." But there is an equal necessity for including, in the chapter on *LIBERTY*, topic 1d—"The supremacy of law as a condition of political liberty"—under the general heading of topic 1: "Natural freedom and political liberty."

Such identical topics are the exception rather than the rule. For the most part, the resemblance between topics of different chapters goes no further than similarity. But there is as much reason, in the interest of analytical completeness, for the partially overlapping topics as for the identical ones. The chapter on *CITIZEN* necessarily contains a discussion of "The qualifications for citizenship: extent of suffrage" (*CITIZEN* 3); this is partially duplicated by a discussion that is unavoidable in the chapter on *CONSTITUTION*--"The justice of different constitutions: the extent and character of citizenship under each" (*CONSTITUTION* 5a). Or, to take another example, the discussion of philosophy necessarily includes the consideration of "The relation of philosophy to mathematics" (*PHILOSOPHY* 1b), which approaches that problem somewhat differently from the inevitable consideration of a similar theme in the discussion of mathematics—"The service of mathematics to dialectic and philosophy: its place in liberal education" (*MATHEMATICS* 1b).

Between any one of the 102 chapters and all the others, the number of overlapping topics—either identical or similar in scope—may at first appear large; but it will seem less remarkable as one realizes the interdependence of the great ideas. Far from concealing the overlapping of topics as if it were a blemish, the Syntopicon calls attention to it, precisely because it points out the interconnection of the great ideas. This is one of the functions performed by the Cross-References in each chapter. As the Inventory of Terms shows the interrelation of the great ideas by noting the appearance of the same term in topics of various chapters, so the Cross-References show the interrelation of the great ideas by

noting, for the topics of one chapter, the topics in other chapters with which they have some affinity.

THE CROSS-REFERENCES POINT OUT TWO DIFFERENT KINDS of affinity between the topics of one chapter and the topics in others. One sort, the affinity of similar topics, has already been discussed. The other sort of affinity exists between a topic in one chapter and topics in other chapters that deal with related, not similar, matters. The latter provide contextual discussion of matters bordering on the theme proposed by the first.

For example, the chapter on FAMILY contains a discussion of "Eugenics: control of breeding; birth control" (FAMILY 6b); the chapter on EVOLUTION goes more fully into the problems of genetics and heredity, and contains two sets of topics which provide a general context for the consideration of eugenics in the chapter on FAMILY. They are the topics in EVOLUTION headed by "2. Genetic variation in the course of generations," and "3. The process of heredity." The Cross References in the chapter on FAMILY, therefore, call attention to the topics in EVOLUTION in the following manner:

For: A more general consideration of the problems of heredity, *see* EVOLUTION 2-3c.

The Cross-References also perform one other service. Sometimes a topic or group of topics is omitted from a particular chapter because, while it has relevance to the idea of that chapter, it is not indispensable to a rounded or balanced analysis of that idea. However, this topic or group of topics may be necessarily involved in the analysis of some other idea. The Cross-References call attention to such supplementary topics.

For example, the chapter on POETRY might have considered the nature of the fine arts, of which poetry is one. But the Outline of Topics for POETRY opens with a consideration of "The nature of poetry: its distinction from other arts." To supplement this with a discussion of the general theory of the fine arts, presupposed by the distinction of poetry from other arts, the Cross-References contain the following entry:

"For. The consideration of the fine arts in general, *see* ART 7a "

Often there is only a shadowy difference between the cross-references to such supplementary topics and the cross-references to related or contextual topics. It rests largely on a sense of the fitness of a particular topic for the Outline of Topics of a particular chapter. If the topics cited by the Cross-References might have been included in this chapter but were not necessary, they can be regarded as supplementary; if, on the other hand, they would have been adventitious or, at best, peripheral in this chapter, they can be regarded as contextual. In contrast, there is a sharp difference between both these types of cross-references and the third type, which cites similar or identical topics in this and other chapters—topics which are necessary to all the chapters concerned.

The three types of cross-references can sometimes be recognized by certain characteristic words in their phrasing. The cross-references to similar or identical topics often begin with such words as "*For: Other discussions of . . .*," or "*For: Another consideration of . . .*," or "*For: Other aspects of . . .*." The cross-references to contextual or related topics usually begin with such words as "*For: Matters relevant to . . .*," or "*For: Discussions bearing on . . .*," or "*For: Discussions related to . . .*" Still another phrasing for the contextual cross-references is "*For: The general theory of . . .*," or "*For: The general discussion of . . .*"⁴

The order of the Cross-References follows roughly the order of topics in the Outline. The wording of the Cross-References generally indicates the topic or group of topics in the Outline for which the particular cross-reference to topics in other chapters is being made. For example, LABOR 1a reads: "The curse of labor: myths of a golden age and the decay of the world." The first cross-reference in LABOR reads: "*For: Other discussions of the golden age, see MAN 9a; PROGRESS 1c; TIME 8b.*" LABOR 1c reads: "The pain of labor and the expiation of sin: the disciplinary and penal use of labor." The second cross-reference in LABOR reads: "*For: Other considerations of penal labor, see PUNISHMENT 4b(3).*" LABOR 1e reads: "The honor of work and the virtue of productivity: progress through the invention of arts for the conquest of nature." The third cross-reference in LABOR reads: "*For: Matters relevant to the nature of productive work and the factors influencing productivity, see ART 4, 9a-9b; EDUCATION 6; SCIENCE 1b(1)-1b(2); WEALTH 3a.*"

Since the relation between particular topics and particular cross-references is immediately obvious from the parallelism in their wording, the absence of cross-references for some of the topics is also immediately discernible. For example, LABOR 1d—"The social necessity of labor and the moral obligation to work"—does not have a cross-reference to topics in other chapters. No other chapter contains topics *similar enough* or *closely enough related* to this theme to warrant their being cited.

This is usually the explanation of the lack of cross-references for certain topics. But sometimes the omission of cross-references for particular topics may have been simply an oversight, which is natural enough in view of the magnitude of the comparison involved—each topic with 3000 others. And sometimes the omission may represent a debatable judgment concerning the relevance of topics in other chapters to a particular topic in this one, or concerning the similarity between a topic in this chapter and those in other chapters. Whether other topics are *similar enough* or *closely enough related* may frequently be a difficult and reversible decision.

As already pointed out, both the Cross-References and the Inventory of Terms

⁴The cross-references to supplementary topics are usually signified by the same opening words as those to the contextual topics; and a great many cross-references which are not marked by any distinctive phrasing may belong to any one of the three types. The reader may not always be notified in advance what to expect in the topics of other chapters cited by the Cross-References; but where the phrasing fails to give him such information, he can readily discover for himself the type of relation involved in the cross-references by turning to the topics cited.

serve to trace the intricate network of relationships among the 102 great ideas. Each does this in its own way. It should be added that both the Cross-References and the Inventory of Terms also serve as instruments for finding particular topics among the 3000 topics in the 102 chapters. The Cross-References do this by listing the topics of other chapters according to their relevance or similarity to those of a particular chapter. Hence the reader, while using or studying a particular chapter, is informed of the location of germane topics in other chapters. The Inventory of Terms lists the fundamentally significant words in each of the topics and, in addition, the terms which are implied by its meaning. Each term is followed by a list of chapters in which related or similar topics appear.

III. THE INTRODUCTIONS

IN THE STRUCTURE OF EACH CHAPTER, the Outline of Topics follows the Introduction. This essay might have been expected, therefore, to deal with the Introductions before it discussed the Outlines of Topics.

There are two reasons for reversing the expected order. First, the topics are, in a sense, integral parts of the great ideas; and, therefore, the examination of the Outlines as analyses of the ideas naturally follows the consideration of the ideas themselves. Second, the topics state the themes, problems, and issues with which the Introductions deal. The Introduction to each of the great ideas is, in part at least, a commentary on its topics. It is not out of order, therefore, to examine the commentary after considering the topics commented on.

But if this is the proper order, then it would seem that it might have been better, in constructing the Syntopicon, to have placed the Outline of Topics first in each chapter, with the Introduction following rather than preceding it. But the fact is that the Introductions are *only in part* a commentary on the topics. They also deal with the idea as a whole, in such a way as to be preparatory for reading the topics. They are genuinely introductions *to* the topics as well as commentaries *on* them.

The reciprocal illumination of each by the other will be better understood in terms of the purposes the Introductions are intended to serve. It will then become clear that the advantage of reading the Outlines of Topics before the Introductions is almost equal to the advantage of reading the Introductions first.

LIKE THE OUTLINES OF TOPICS, the Introductions vary from chapter to chapter—not so much in length as in their method of exposition. They do not all begin or end in the same way; nor do they uniformly treat the same matters or proceed in the same order.

The way in which each Introduction deals with a great idea corresponds to the characteristic difference of that idea from all the others. The ideas differ in four respects, and the Introductions differ accordingly. Each idea has a unique structure. It also has a unique history. The character and intensity of its verbal difficulties are often peculiar to itself. The problems and issues it has engendered are different in origin and in the possibilities of their resolution.

Nevertheless, all the Introductions were conceived and written to perform a common task. They were intended to serve the same fourfold purpose, corresponding to the four respects in which the ideas differ. The Introductions attempt to treat each idea *semantically, historically, analytically, and dialectically*.

(1) *The semantic aim.* It has already been pointed out that most of the names of the great ideas have a range of meanings. They have been used by the authors of the great books in different senses, and many of them have, in addition, meanings of recent origin or popularity. This is true not only of the principal term in each chapter, but also of some of the subordinate terms which appear in the topics. Often the meaning of the principal term is affected by the meaning of a subordinate term connected with it in the statement of a topic.

The semantic aim of the Introductions is to record the various meanings of the words which have been used to name the great ideas, and of the other words which have been used traditionally and currently in discussing the great ideas. The Introductions seldom try to do this exhaustively. They aim at verbal clarification only where necessary—in order to prevent real agreements from being obscured by differences in language, or to discover real disagreements in thought between men who, so far as their language goes, appear to be saying the same, or at least compatible, things.

Like the other parts of the Syntopicon, the Introductions have as their ultimate aim the re-enactment of the great conversation. Each Introduction tries to recreate the discussion of a great idea as though the authors contributing to that discussion were engaged in conversation about its major topics—and almost as though they were contemporaries, confronting each other in actual discourse, rather than dispersed across thirty centuries. The semantic aim of the Introductions is to clarify the meanings of the words they use so that they can be heard talking relevantly to one another. The Introductions succeed to the extent that they suggest how the great minds of the western tradition exist together in a single universe of discourse.

(2) *The historical aim.* To collapse thirty centuries of imagination and thought into a single historical moment would seem to be unhistorical or, worse, anti-historical. Yet the Introductions have just been described as doing exactly this, since they treat the authors of the great books as if they were contemporaries, and use the present tense in reporting their discussion of ideas.

Mill and Aristotle, for example, may be reported as taking one side of an issue, on which they are opposed by Plato and Hobbes. Lucretius may be said to be more in agreement with Freud on certain matters than he is with anyone in antiquity. As far as possible the authors are associated with one another in terms of their thought, not their times. They are opposed to one another in the same way. The centuries can be as readily bridged by genuine agreements as they can be divided by disagreements, apparent or genuine. Neither the agreement nor the disagreement is a necessary function of simultaneity or succession in time.

Yet sometimes a certain point of view is characteristic of a period or phase of western civilization. Sometimes the political, economic, and cultural conditions of a time are more than the background of thinking or the environment to which the thought refers; they are conditions of the thought itself, and therefore of its intelligibility. It is unquestionable that some men originate ideas which others borrow and often change. There is little doubt that the thought of one whole period influences the thought of a later period, either to react against it or to alter it for assimilation. Certainly, then, the succession of the centuries, the location of minds in time, the relation of thought and imagery to the culture of a period, the influence of one mind upon another and one period upon another—certainly all these things are significant features of the great conversation as it develops in time. The very word "tradition" connotes a passing from age to age—both a heritage and an inheritance. To consider the tradition of western thought is, therefore, to deal with the history of ideas.

Both sides of the picture contain a portion of the truth--the temporal and the non-temporal, the historical and the unhistorical. Thought transcends time to a certain extent, and to a certain extent time conditions thought. Ideas have a career in time and, therefore, a history; but they also have an inner logic which transcends history. To some extent, therefore, all minds dealing with the same ideas are contemporary; they are together in the same logical, if not historical, moment by virtue of their agreements and disagreements. To deny this is to commit the error of historicism. But in some measure minds dealing with the same ideas cannot deal with them in the same way at different historical moments. To neglect or ignore this fact is to commit an opposite error which might be labelled transcendentalism.

The Introductions try to avoid the fallacies of both extremes by combining the historical with the logical treatment of ideas. But they do not try to do equal justice to both aspects of the matter, and in consequence do not preserve a perfect balance between the two approaches. The primary aim of the Introductions is not historical, as it is not semantic. It is dialectical. The Introductions do not carry verbal clarification further than is necessary to prevent language from obscuring the logical realities—the issues, the agreements, the disagreements, and the arguments. For the same reason, the Introductions do not engage in the history of ideas for its own sake. They remain unhistorical wherever possible, and become historical only to indicate places where the history of ideas is itself part of the dialectic of ideas.

Not all of the great ideas are involved in an historical dialectic to the same extent. At one extreme, with ideas like BEAUTY, CHANCE, COURAGE, DEFINITION, EDUCATION, EMOTION, HAPPINESS, INFINITY, JUSTICE, KNOWLEDGE, LOVE, NATURE, OPINION, PLEASURE AND PAIN, PUNISHMENT, SENSE, and TYRANNY, the discussion seems to be comparatively unaffected by the historical location of the minds engaged in it. It completes almost the same circle of logical development in every period; the focus does not change from time to time; the discussion as a whole does not move irreversibly along the line of history. The Introductions to

such chapters, therefore, can be largely unhistorical in their dialectical effort to state the main features of the discussion.

At the other extreme, with such ideas as ANGEL, ASTRONOMY, CONSTITUTION, DEMOCRACY, ELEMENT, EVOLUTION, FAMILY, GOD, IMMORTALITY, LABOR, LOGIC, MATHEMATICS, MECHANICS, PHILOSOPHY, PROGRESS, PROPHECY, RELIGION, SIN, THEOLOGY, WAR AND PEACE, and WEALTH, the discussion seems to be seriously affected by intellectual and cultural differences between different epochs. The whole conversation shifts its ground and changes its focus as it passes, in the spheres of politics, economics, and the sciences, from ancient to modern times; and, in the spheres of religion and theology, from pagan antiquity to the Christian Middle Ages or from mediaeval Christendom to the increasingly secular culture of the modern epoch. Its starting points are not the same, and its logical development takes different directions as the whole discussion develops historically. Hence the Introductions to such chapters must be historical in treating the pivotal points of the dialectic.

To the extent to which the Introductions treat the great ideas historically, they trace their development in a number of ways. They may call attention, on the semantic side, to changes in the meaning of the basic words from period to period. On the analytical side, they frequently note which parts of the idea—which of its topics or themes—occupied the center of discussion at one time, but received little or no attention at another. Above all, in relation to the dialectic of the discussion, they try to suggest the actual course of the great conversation. By observing its continuities and discontinuities, especially the latter, they throw historical light on the failures of the dialectic - the failure of minds to meet or join issue, or, as between the thought of one period and that of another, the weakening of relevance to the breaking point.

If, on the whole, the Introductions lean more to the dialectic than to the history of the great ideas, the balance is somewhat restored by the fact that, under each topic, the references to the great books are arranged in historical order. The reader who follows the discussion by reading the books or passages in the order in which they are cited will be able to discover for himself many historical collocations and sequences which the Introductions fail to note; where they are only suggested or briefly touched on in the Introductions, they are amply documented in the References.

Yet even here the complementary point remains to be made. Under each topic, the references are set forth in historical order. But the books and passages cited under one topic would not be there unless they all satisfied the requirement of relevance. They can be relevant to one another only if they are talking about the same thing. Such relevance signifies that all the authors belong to the same tradition, or, in other words, that they all participate in the same culture or civilization, no matter how it may be subdivided into epochs or phases.

From the point of view of world culture, which must remain unformed so long as the world remains divided into a number of distinct cultures, what we call the culture of the west is unitary, in spite of all the separate strands or segments we

can find in it. From the point of view of world history, which in a strict sense cannot begin until a world culture is formed, the thirty centuries of imagination and thought represented in the great books tend to become a single time, even as the books tend to belong to a single tradition and culture. By taking the point of view of future world history, we can imagine how the whole tradition of western culture may some day appear as a single parochial episode. In a sense the Introductions are making this imaginary construction when they present the great conversation in the present tense, as if it were taking place among contemporaries.

(3) *The analytical aim.* The Outlines of Topics present analyses of the great ideas. The Introductions perform an analytical function in commenting on the structure of the ideas as set forth in the Outlines.

The Outlines do not explain themselves; for the most part, the order and subordination of the topics do not need explanation. But occasionally the reason for including or giving special prominence to a certain topic or group of topics may not be immediately obvious, especially if the matters dealt with are not familiar to contemporary thought. The converse is also true. Occasionally, the absence of topics which are currently subjects of great interest may deserve a word of explanation. The Introductions try to throw light on both these aspects of the Outlines.

The major parts of the discussion of a great idea are the fundamental problems and issues in which that idea is involved. In commenting on these, the Introductions usually adopt the topical statement of them in the Outlines. Though there is seldom a perfect correspondence between the content of the Introductions and that of the Outlines, there is a general conformity between the main points treated in each. Their order is not necessarily the same, for a discursive treatment of related problems and issues usually demands an order markedly different from that suitable to a topical outline.

In many chapters, topics will be found in the Outline which are not considered in the Introduction. There are two reasons for this. First, the Outline of Topics for a particular idea usually raises more points of importance or interest than can be treated in a short essay. Therefore, some must be ignored or mentioned only in passing. Second, the Outline in a particular chapter frequently includes topics which are similar to or identical with topics in other chapters. Hence, to avoid repetition and undue length, the Introduction to a particular chapter may leave to another chapter's Introduction the treatment of a subject common to both.

Wherever possible, the Introductions notify the reader that a given topic receives attention or ampler treatment in the Introductions to other chapters. Just as the Cross-References for a given chapter indicate the relation of its topics to those of other chapters, so the Introduction supplies its own cross-references to other Introductions in which related matters are discussed. In doing this, the Introductions not only indicate, but often try to illuminate, the interconnection of the great ideas. In addition to examining the structure of the idea with which it deals, it is part of the analytical aim of each Introduction to place this idea in

the larger structure of the whole set of ideas, and especially in the constellation of closely related ideas to which it belongs.

In performing their function as commentaries on the Outlines of Topics, the Introductions usually pay special attention to the groups of doctrinal topics which set forth the positions or views of different authors in their own language. The fact that doctrinal topics could not be avoided in the Outline for a particular chapter indicates both semantic and analytical difficulties which the mere statement of doctrinal topics seldom solves completely. Wherever possible, the Introductions attempt to deal with these difficulties discursively and to clarify points that the elliptical statement of the topics necessarily leaves obscure. But the groups of doctrinal topics call for more than clarification. They usually represent a profound difference of opinion or a many-sided controversy in the tradition of the great books. In treating such matters, the Introductions go beyond their semantic and analytical functions to the dialectical, which is their primary aim.

(4) *The dialectical aim.* The Introductions attempt to report some of the major issues, or basic intellectual oppositions, in the sphere of each of the great ideas. That this is their primary aim does not imply that disagreement is the dominant feature of the intellectual tradition. On the contrary, agreement in almost every case accompanies disagreement; that is, on most of the great issues, the opinions or views which represent opposite sides of the dispute are shared by several authors, often by many. Seldom do we find a solitary exponent of a controversial position.

The great issues align men side by side as well as range them against one another. If, in the rare case, disagreement does not carry with it a proportionate amount of agreement, that disproportion is balanced by the fact that, on a small number of fundamental questions, there seems to be no disagreement among the authors of the great books. On the whole, there is as much agreement as disagreement in the tradition of western thought—agreement across the centuries as well as among contemporaries, and disagreement likewise.

The primacy of the dialectical aim of the Introductions follows from the primacy of the mind's concern with truth. The other aims represent preparatory considerations—how language has been used to express thought, how thought has been affected by historic circumstances, the ground thought has covered in dealing with the great ideas. All these preparations lead to the question they leave unanswered. Where does the truth lie in all the thinking that has been done on each of the great ideas? Where is thought true, and where is it false?

The dialectical aim of the Introductions is primary because it is motivated by this fundamental consideration. In their concern with agreements and disagreements, the Introductions approach the question of truth and falsity. The agreement of men about the nature of things in any field of inquiry establishes some presumption of the truth of the opinions they commonly hold. Their disagreement establishes the counter-presumption—that none of the opinions in conflict, whether shared or not, may be wholly true. Among conflicting opinions, one may,

of course, be wholly true and all the rest false; but it is also possible that each expresses some portion of the whole truth; and, except for flat and isolated contradictions (which seldom if ever occur in the great conversation), it is even possible that all the conflicting opinions may be false, just as it is possible for that opinion to be false on which all seem to agree. Some opinion as yet unexpressed—at least not discoverable in the great books or in other books—may be the truth or nearer to it. In short, agreement and disagreement raise no more than a presumption of truth and falsity, a presumption which further inquiry can always challenge or rebut.

This being the case, the Introductions, in their dialectical effort, must fall short of answering the question which is the mind's fundamental concern. They would be dogmatic, not dialectical, if, on any of the great issues, they asserted or tried to prove the truth or falsity of any view. They would simply become one more voice in the perennial debate on fundamental issues. They refrain from doing this in order to do something else.

The point is not that one more voice carries no weight in the forum of human discussion. The point is rather that a different type of contribution to the pursuit of truth can and should be made. Moreover, it is the only contribution the Introductions can properly make as an integral part of a syntopicon of the great books. These are not isolated essays published by an author in his own name. They are Introductions to chapters on the great ideas in the great books. They introduce the Outlines of Topics. Together with the topics, they lead the reader to the References, and prepare him to read, interpret, and judge what he finds in the books and passages there referred to.

The special contribution the Introductions try to make to the debate of perennial issues consists in being resolutely dialectical throughout. The special quality they try to achieve can be summarized in two words: dialectical objectivity.⁵

⁵The words "dialectical objectivity" may be new, but the ideal they express is old. It has always been the ideal of the encyclopaedist, and the greatness of an encyclopaedia can almost be measured by the closeness of its approximation to this ideal.

In his Prefatory Notice to the 9th edition of the *Encyclopaedia Britannica*, the Editor, T. S. Baynes, wrote that, in the conflict of opinion, "a work like the *Encyclopaedia* is not called upon to take any direct part. It has to do with knowledge rather than opinion, and to deal with all subjects from a critical and historical, rather than a dogmatic, point of view. It cannot be the organ of any sect or party in Science, Religion, or Philosophy. Its main duty is to give an accurate account of the facts and an impartial summary of results in every department of inquiry and research."

In the Prefatory Material to the 11th edition of the *Encyclopaedia Britannica*, James Bryce quoted the foregoing paragraph from Baynes, and added: "The *Encyclopaedia Britannica* itself has no side or party, it attempts to give representation to all parties, sects, and sides . . . Every effort has been made to obtain, impartially, such statements of doctrine and belief in matters of religion and similar questions as are satisfactory to those who hold them, and to deal with these questions, so far as criticism is concerned, in such a way that the controversial points may be understood and appreciated, without prejudice to the argument. The easy way to what is sometimes considered impartiality is to leave controversy out altogether; that would be to avoid responsibility at the cost of perpetuating ignorance, for it is only in the light of the controversies about them that the importance of these questions of doctrine and opinion can be realized. . . . Amid the variety of beliefs which are held with sincere conviction by one set of people or another, impartiality does not consist in concealing criticism, or in withholding the knowledge of divergent opinion, but in an attitude of scientific respect which is precise in stating a belief in the terms, and according to the interpretation, accepted by those who hold it." And in another place, Bryce said: "He who writes a treatise often writes it to prove his own theory and disparage the theories of others; but in a work of reference such exclusiveness or partisanship would be reprehended, and is therefore usually avoided."

They try to look at all sides and take no sides. Of course, they fail to achieve so exacting an ideal. They may succeed, as the topics do, in taking no sides. Just as the topics state subjects on which there can be different opinions, without affirming or denying any of the possible opinions, so the Introductions try to present the issues without prejudice to any partisan point of view, and treat conflicting positions impartially. But it is easier to take no sides than to look at all sides. In this latter respect, the Introductions undoubtedly fail.

To begin with, it is never possible to say that *all* possible sides of an important issue have been examined. They can never be exhaustively enumerated. The answers and arguments to be found in the great books are always weighty and significant, and are usually a fair sampling of the best human thought on the subject, but they never exhaust the possibilities of thought. Secondly, it is seldom possible for the Introductions, within the limits of a short essay, to examine even all the answers and arguments in the great books; and even if some selection can be justified on the ground that it chooses the most significant opinions or the principal arguments, it still remains a selection. Finally, even those positions and arguments selected for examination and summary may not all be viewed with an equally open mind or presented in an equally favorable light. Perfect dialectical objectivity is not guaranteed by avoiding explicit judgments on the truth of conflicting opinions. Partiality can intrude itself in a variety of subtler ways — by the manner in which arguments are summarized, by shades of emphasis and neglect, by the tone of a question or the color of a passing remark, and by the order in which the various positions are presented.

In order to avoid some of these faults, or at least to minimize their impairment of dialectical objectivity, the Introductions resort to an obvious device and use it as much as possible. They report the opinion or argument of an author in his own language, substituting quotation for summary. Quotations may, of course, be wrenched out of context, and their sense may be falsified by the way in which they are quoted. But since each introductory essay is associated with references to the great books, citing fully all the passages from which the quotations are taken (and many more besides, which provide the rest of the context), the reader of the Introductions is protected against such discrepancies as may occur. This device of quotation provides the Introductions with a safeguard against the greater danger of summarization. In addition, it gives them the flavor of the great conversation itself. It offers the reader a sample of the wealth of material cited in the References.

Only the writer's firm intention to avoid them can be relied on to prevent other sorts of defection from dialectical objectivity. Dialectical objectivity demands a deliberate effort to balance question against question, to forego any comment that might be prejudicial, to check any tendency toward over- or under-emphasis. The reader can judge for himself the extent to which such effort has been successful in the writing of the Introductions. On all these counts, the measure of dialectical objectivity achieved should be evident. But the reader cannot easily judge its achievement on the one remaining count—the order of discussion in the Introductions.

For example, many Introductions end with the exposition of a particular author's theory of a controversial subject, and sometimes with a quotation unaccompanied by comment. Does this signify approval of the author's position on the question? In presenting a number of conflicting positions, the Introductions must necessarily expound them in some order. Does the theory coming last in the series have the favored place, or does the first? The assumption behind these questions (which arise naturally enough) is that the writer of the Introductions may have intellectual convictions which influence his ordering of the discussion, even though he does not allow himself to express them explicitly in the form of judgments about what is true or false.

That assumption is partly correct. No mature mind can be without convictions. But they do not necessarily constitute an insuperable obstacle to maintaining the dialectical detachment sought for in the Introductions. If the writer can refrain from expressing his own judgment about what is true and false, he can also, though perhaps with more difficulty, exercise sufficient caution to prevent his convictions from influencing the order in which he treats a variety of opinions, one of which he may hold as his own. He can do this by making certain that the views he himself favors do not uniformly occupy the same place in the order of discussion – whether that be first or last.

A deliberate effort was made to avoid uniformity in the order of treatment. The result of this attempt cannot be judged by examining a single Introduction; but, by taking the 102 Introductions as a whole, the reader can observe whether uniformity has been avoided.

The reader's final judgment on the attainment of their dialectical aim can be made in terms of a test much more relevant than any examination of details of method or order in the Introductions. If a dialectical balance has been preserved, the reader should be left with the major questions to answer for himself. He should be left with the major issues unresolved, unless he has resolved them in his own mind. If he has any opinion as to where the truth lies, it should be his own, formed by him in the light of his reading, not pre-formed for him in any way. From the Introductions themselves, he should derive only three types of opinion: (1) that, for each of the great ideas, these are *some* of the questions or issues worth considering; (2) that, for each of the questions or issues mentioned, these are *some* of the answers or solutions; and (3) that some of the questions are so connected that answering one of them in a certain way partly determines how others must be answered.

If the Introductions do more than this, they overstep their dialectical limits, for more than this would be to declare one answer true and another false. But if they do this much, neither more nor less, then they neither exceed their bounds nor fall short of their mark. And if, with respect to the three types of opinion they do try to assert, the Introductions win the reader's acceptance, then they have for him as much dialectical truth as can be attained.

IT SEEMS APPROPRIATE AT THIS POINT to say a word about the writing of the Introductions.

They were written by the Editor in Chief of *The Great Ideas*. In a few cases, preliminary drafts of the essays were prepared by the General Editor. Drafts of all the essays were read and criticized by the Editor in Chief of *Great Books of the Western World*, by editors on the staff of the Syntopicon, and by other persons who generously accepted the task of reading and commenting on them.

The suggestions for revision from all these sources were collated to guide the writing of a final draft. In this, as in most collaborative efforts, the final responsibility for accepting or rejecting suggestions rested with one person. The Editor in Chief of *The Great Ideas* assumed that final responsibility of authorship. To some degree, then, the Introductions as published bear the authority of a group of minds working in collaboration, but they do not pretend to be that anomalous thing—a composite literary production.

In their report of the traditional discussion of the great ideas, the Introductions reflect their author's reading of the great books. They also represent some knowledge of the books listed in the Additional Readings; it should not be necessary to say that no one—certainly no one responsible for the content of the Introductions—has read all this literature. As for the great books, no one can claim to have read them all equally well, or to have read all of them systematically and carefully for their relevance to each of the 102 great ideas. That kind of reading was hardly feasible before the Syntopicon was constructed. The Introductions were being written at the same time that the references to the great books were being compiled, topic by topic, idea after idea.

One fact about the writing of the Introductions deserves repetition and emphasis. They were conceived as parts of the Syntopicon and constructed in relation to the other parts, especially the Outlines of Topics and the References. According to this conception of their purpose, they were written, not for scholars or specialists, but for the general reader—or, more specifically, for future readers of the great books.

This last point calls attention to one of the difficulties faced in writing the Introductions. They could have, and would have, been written quite differently had they been intended for an audience of persons already familiar with the great books. Should such persons read the Introductions, they may need to be reminded of this fact. Some readers may have devoted considerable time to the study of a particular author or group of authors; as measured by the depth of their own scholarship, the Introductions may appear superficial or inadequate in the treatment of those authors. Other readers, as a result of their own scientific or philosophical work, may hold certain of the theories discussed in the Introductions; as measured by the complexity of their own speculative involvement, the Introductions may appear to present imperfect or over-simplified versions of these doctrines. Such persons are asked to remember that the Introductions try to give some account of *all*, not just a few, of the authors of the great books, and to present, for each of the great ideas, a dialectical treatment of conflicting opinions, not a scholarly exposition of particular doctrines considered in isolation. This they try to do in a manner suited to the layman, not the specialist—for future readers of the great books, not past masters of them.

From the standpoint of the lay reader, the Introductions may have defects of an opposite sort. The effort to make them intelligible to a person who has not read the great books—or, certainly, not studied them—involved a constant struggle against space limitations. It was often necessary to use certain technical words or phrases which have an established traditional meaning, without being able to explain their significance in readily understandable terms. For example, for brevity of reference it was often necessary to use such expressions as Kant's "categorical imperative," Hegel's "Absolute Idea," Spinoza's "infinite modes," Freud's "repression," Newton's "evanescent quantity," or Ptolemy's "epicycles," but it was not always possible, at the point at which they were used, to explain their meaning.

When the Introductions are obscure or cryptic for this reason, a remedy is available for the lay reader. The language of the Introductions is keyed to that of the topics. The reader can therefore go to the topic which contains the difficult word or phrase; under it he will find references to the book in which that expression is amply explained by the author who made it part of his technical vocabulary. In some instances, the difficult expression does not appear in the language of the topics, but, as used in the Introductions, it may be associated with the name of a particular author. The remedy is still to go to the References, find the citations of that author's work, and look there for its meaning.

THE BREVITY OF THE INTRODUCTIONS makes them dependent upon a reading of the great books, under the guidance of the topics and references, for the amplification of meanings. This is also true of many of the concepts and theories they deal with. Brevity of treatment, with or without quotations from authors, will leave the reader in need of fuller explanation. For the reader who is left perplexed by the Introductions, the References provide a direct route to the better understanding he seeks.

The brevity of the Introductions even helps to fulfill the primary purpose of the Syntopicon as a whole, which is to serve as a stimulus and a guide to reading the great books. Reading the Introductions can never be a substitute for reading the books. The Introductions were designed to create, and leave unsatisfied, an appetite for understanding. The quotations from the great books which they contain are always, as the volume of the References indicates, a small proportion of the quotable material. The topics with which they deal at any length are always a small proportion of the topics under the Outline for each idea.

The Introductions are thus, at best, intimations of the great conversation. They are, in short, introductions; and, in addition to all their other aims, they have a seductive aim which succeeds whenever the reader is prompted by perplexity, doubt, curiosity, or wonder to go from the Introductions to the References and from them to the great books. Since the Introductions usually employ the language of the topics, the reader is seldom left in doubt as to where he can find the additional material he seeks.

There is one other deficiency in the Introductions which results from their brevity, and it, too, has its remedy. The interconnection of the great ideas is such

that sometimes the same points—the same problems, issues, concepts, or theories—deserve treatment in the Introductions to more than one chapter. Since the Introductions appear in the alphabetical order of the ideas, each had to be written so that it could be read as an autonomous essay. This consideration made desirable the repetition of certain matters in two or more Introductions, but the amount of repetition was sharply limited by the requirement of brevity.

In consequence, certain matters, highly relevant to the dialectic of a particular idea, were reserved for treatment in the Introductions to other ideas. Wherever this occurs, the Introductions cite the other chapters in which these points are more amply treated. Thus, though any particular Introduction may be obscure because it does not fully explain all the notions or doctrines to which it alludes, other Introductions provide the reader with a remedy.

As for the great ideas, so also for the Introductions to the chapters on them, the alphabetical order conceals the intricate and highly significant pattern of their interdependence or co-implication. This order permits the reader to begin with any Introduction, or to read any one without first having to read others. But though the Introductions were designed for such use, they were also written with an eye to the total pattern of the great ideas. It is part of their aim to take the reader wherever he starts and lead him from one idea to another along paths that, crisscrossing in all directions, cover the whole circle of ideas.

IV. THE REFERENCES

THE REFERENCES, WHICH FORM THE CENTRAL PART OF EACH CHAPTER, are the heart of the Syntopicon. More than either the Introductions or the Outlines of Topics, the References represent a reading of the great books. Quite literally, each of the 163,000 references enumerated under the 2987 topics represents an examination of a book, in whole or part, for its relevance to the topic under which the reference is given.

The reading necessary to record the 163,000 references could hardly be done by one man, or even a small group of men, within so short a time as seven years. The great books could be read through once in that time, but a first reading would obviously be inadequate to the task of discovering the contribution each makes to the thousands of themes which comprise the length and breadth of the great conversation. Nor could the situation be very much improved simply by a second or third reading. The References represent a different type of reading.

To use a comparison which may help to explain the difference, the ordinary reading of a great book is like photographing a richly complex scene, taking it in as a whole by seeing the picture from a certain distance; whereas the kind of reading which produced the References is like a "close-up," viewing one detail in that scene and making it stand out as clearly as possible. As a photographic "close-up" presupposes the picture of the whole as background, so reading with a special focus presupposes the ordinary perspective in reading. In terms of this analogy, each of the 2987 topics is a special focus on the 443 works comprising *Great Books of the Western World* and, in addition, the 77 books of the Bible.

It might almost be said that, to produce the References, this body of literature had to be read with a special focus as many times as a real difference in the topics required a change of focus. At least that is the effect the References create for the user of the Syntopicon. The references under each topic provide him with a special set of readings *in* the great books, produced by reading *through* them with a particular theme or question in mind.

The necessity of employing a fairly large staff of readers to create the references for a syntopical reading of the great books and the Bible, combined with inevitable changes in personnel over a period of seven years, raised the problem of achieving a unified result from the collaboration of so many minds. If, for example, two readers understood the same topic differently, they would not be reading the books from the same point of view, when they selected passages to be cited in the references under that topic. With a staff of thirty to forty readers, the possibility and extent of such discrepancies were multiplied many times. The difficulty of obtaining a unified result was aggravated by other circumstances, such as the number of books which had to be read, the different kinds of reading demanded by their variety, and the number of topics which had to be considered in relation to one another.

Just as the Introductions have unity because they were written by one person, so, ideally, the References ought to have a comparable unity— as if, so to speak, all the reading they represent had been done by one man, yet safeguarded against the blindnesses and biases of any individual mind by having that one reader consult with many others in order to weigh and verify his interpretation of the texts.

Under the exigencies of time, and in terms of inescapable human limitations, the unity of the References could not be achieved in that way. To explain how a sufficiently unified result was obtained from the collaboration of so many minds, and to throw light on the problems faced in compiling the References, it seems useful to relate briefly how the work was done.

THE WORK OF COMPILING THE REFERENCES was accomplished in three distinct phases: a preliminary or exploratory phase; a middle period devoted to systematic reading and discussion; and a final phase in which the references were critically reviewed and edited.

At the beginning of the work, the staff of readers cited books or passages for their relevance to one or more of the great ideas. The list of ideas was still tentative; and each idea was treated as a heading by itself, without subdivision into topics. Each member of the editorial staff was assigned a particular group of authors and was responsible for discovering their contribution to the discussion of all the ideas.

The most important result of this initial exploratory phase was the realization of the need for a topical analysis of each of the main ideas. The second and more systematic phase of the work began when the list of 102 ideas was finally determined and a topical analysis of each idea had been drafted. In their first formulation the topics reflected the reading done in the previous period, but they also

required that reading to be re-done for the sake of testing the topics and improving the references.

In the concomitant development of the Outlines of Topics and the References, refinements in syntopical analysis and syntopical reading had to keep pace with one another. At each stage, the topics directed the course of syntopical reading, and syntopical reading tested the topics for their accuracy and adequacy as statements of the themes discussed in the great books. Each stage involved a renewed examination of the books in the light of the topics, and an adjustment of the topics to the discoveries of research. Topics were discarded, new ones were added; topics were rephrased or merged with one another. The next stage of reading had to respond to all the changes in topics caused by the previous stage. This meant a systematic examination of the references which had been assembled at the previous stage, and a continuing search for new references to ensure an adequate treatment of the books under the topics as then formulated.

It was crucial to the idea of the Syntopicon that the editorial staff share a common understanding of the topics and the books. But the division of labor which had been adopted tended to make the individual reader a specialist in handling a particular group of authors and works. Each member of the editorial staff developed special knowledge of certain books, special skill in reading them syntopically, and special articulateness in calling attention to the problems raised by his authors and books.

Regular staff conferences were instituted to overcome the disadvantages of such specialization as well as to take advantage of its benefits. Conducted by the Editor in Chief, with assistance from the General Editor, the conferences aimed to produce a community of understanding by considering the meaning of each idea and its topics in relation to the content of the great books as a whole. They also provided an opportunity for individual staff members to criticize the Outlines of Topics from the vantage point of a concentrated syntopical reading of a few assigned authors, and to suggest changes in the topics to accommodate the thought or language of those authors.

The proposed changes had to be considered by other staff members for their effect upon the syntopical treatment of other authors. Any change that was finally adopted had consequences for the work of the entire staff. It was the task of the Editor in Chief to harmonize the different, often conflicting, demands made on the developing structure of the Syntopicon by the content and intellectual style of particular authors; and to balance the special interests urged by individual staff members, against the general aim of making the Syntopicon reflect the content of the great books as a whole.⁶

⁶To maintain the steady flow of work, to keep accurate records of work done and changes made, and to make these records currently available for inspection by the editorial staff was an enormous clerical undertaking. The extent of these labors can best be indicated by the fact that, during the main phase of the work, the clerical staff needed to support and execute the editorial effort was two or three times larger than the editorial staff. Furthermore, the tasks to be performed were never simply clerical; they involved considerable understanding of the material being handled. Were it not for the intelligent direction and vigilant supervision of all this work by the Executive Editor, the Assistant Editors, Editorial Assistants, and Supervisors, errors made in transmitting the materials from one stage to another might have vitiated the entire editorial effort.

The system of specialization during the first two phases of the work necessitated a complete re-examination of the references in order to achieve greater unity and coherence than could be attained simply through staff conferences. To secure these results, the final re-checking of the references had to be organized in a way radically different from the way in which the references had been originally accumulated and checked.

Prior to the last phase of the work, no one of the 102 chapters had, as a whole, been scrutinized in all details; nor had any one person examined, for the topics of each chapter, all the references to the great books. Where before each member of the editorial staff had been responsible for finding and judging passages in a small number of books in relation to all ideas and topics, it was now necessary for some one person to be responsible for examining and judging all the passages cited in a single chapter. In no other way could the coherence of the references under each topic be assured. In no other way could a uniform standard of comprehensiveness and intelligibility be maintained for all the topics in a given chapter.

Under the direction of the Editor in Chief, the General Editor and the three Associate Editors undertook this final critical reading. The 102 chapters were divided among them. Each chapter was examined as a whole by one editor; each of its topics was considered in relation to the whole range of the great books. The problems raised by this study of whole chapters were discussed in general conferences, at which decisions were reached for the resolution of difficulties. The close collaboration of the five editors during this final phase of work was the nearest approach to the ideal of unity which the dimensions of the task permitted.

Both the critical nature of the work during this last period and the character of the editorial conferences required an articulation of general policies, together with an explicit recognition of the discretion needed in applying them. It is therefore possible to give, in the rest of this discussion of the References, an account of the principles which governed their compilation and may guide their sustained use.

THREE GENERAL PRINCIPLES CONTROLLED the compilation of the References. They can be stated as criteria for the acceptability of references proposed for each topic, and even for the tenability of the topic itself in the light of those references.

The first principle was the criterion of *relevance*. The acceptability of any reference under a particular topic depended upon its relevance to the meaning of that topic. This principle, though simple in itself, was extremely complex in application, because of the many types and degrees of relevance which topical headings make possible. Some indication of this can be given by an enumeration of the main types of relevance. A book or passage was judged relevant to a particular topic if it

- expounded one or more of the points made in the topic
- analyzed the meaning of the topic
- explained the significance of the topic
- affirmed one or more of the propositions implied by the topic

- denied one or more of the propositions implied by the topic
- questioned, doubted, challenged, or suspended judgment on one or more of the propositions implied by the topic
- assumed one or more of the propositions implied by the topic in order to develop the consequences of such assumption
- interpreted the meaning of the topic in relation to other matters not stated in the topic, such as its presuppositions or implications
- exemplified the topic by providing illustrative instances from poetry, history, or science
- illuminated the topic by taking it as a point of departure for discussing related matters
- satirized the topic or those who discuss its meaning seriously

These types of relevance are not mutually exclusive. For example, a particular passage may analyze the meaning of the topic as well as affirm or deny one or more of the propositions it implies. Furthermore, not only do these various types of relevance have unequal weight, but also, within each type, passages differ in the degree of their relevance to a particular topic. Hence the judgment of a reference in terms of relevance involved more than a determination that it was or was not relevant in one of the ways enumerated.

The book or passage in question had to be judged for the degree of its relevance, in itself and by comparison with other relevant materials. There was no exact measure for the minimum degree of admissible relevance. The judgment was finally made in terms of the character of the particular topic and in the light of all the other references under consideration. References were often rejected for negligible relevance as well as for irrelevance. The references now remaining under each topic are there because they were finally judged to be substantially relevant.

The second principle was the criterion of *coherence*. As we have already observed in considering the construction of the topics, a normal topic tends to have systematic ambiguity, that is, a number of related meanings. Systematic ambiguity is a middle ground between absolute univocation or unity of meaning, and absolute equivocation or multiplicity of meanings. The few topics with complete unity of meaning raised no problem, since a reference was either relevant to that one meaning or not relevant at all. The problem of coherence occurred for all the rest.

The coherence of the references under a particular topic depended on their being relevant, not to the *same* meaning in all cases, but to *related* meanings. For example, two passages, each of which may be relevant in itself because it explains the meaning of the topic, become incoherent if the meanings they attribute to the topic are utterly unrelated to one another. Strictly speaking, it is not the passages but the topic which becomes incoherent, if it includes references which construe it as having a number of *unrelated* meanings.

The principle of coherence was, therefore, an extension of the principle of relevance. It required that the topic, read in the light of all references under it,

should, if it had many meanings, always remain systematically ambiguous, and never pass into the sheer equivocation produced by unrelated meanings. It also required that a common thread of meaning should run through all passages referred to under a particular topic, making each passage relevant to the others as well as to the topic itself. This did not mean, of course, that all passages would be mutually relevant, either to the same degree or in the same way; just as the principle of relevance did not demand the same type or degree of relevance to the topic of all passages placed under it.

The remedy for incoherence was to reject certain references which did not fit with others under the same topic. If there were two sets of references which did not form a coherent whole, one set had to be rejected.

In some instances, the troublesome references constituted a small proportion of the whole collection, and the problem was easily solved by rejecting these and retaining the rest. But, in other instances the sets of passages which did not fit together were about equal in number and importance; or at least each set was sufficiently numerous and important to deserve retention. In these cases, the usual solution was to formulate a new topic under which one set could more properly be placed, leaving the others under the original topic, which then became coherent through the removal of the first set. Sometimes two new topics were formulated to replace one which had collected several mutually incoherent sets of references.

The principle of coherence automatically prevented topics from dividing into two or more sets of completely incoherent references, but it left to judgment the degree of coherence required to maintain the unity of a given topic involving a number of related meanings. The result of these judgments should be that all references found under any topic not only fit the topic, but fit together under it, and have, to some degree, the unity of a common subject matter of discussion.

The third principle was the criterion of *sufficiency*. This applied to topics, not to individual references. In the final stage of work, each topic had to be judged to determine whether its collection of references was sufficient to justify its retention.

As the principles of relevance and coherence guided the editors in correcting errors of commission, so the principle of sufficiency directed attention to errors of omission and caused a search for materials to supply the deficiency. It was never possible, of course, to be certain that all errors of omission had been corrected. Errors of commission were detectable in materials which could be thoroughly examined; but to be sure that errors of omission had not been made in the treatment of a particular topic would have meant, on each occasion of doubt, the re-examination of 443 separate works and 77 books of the Bible.

Hence the judgment as to the adequacy of a given set of references always involved doubt. It is certainly not claimed for the references under the 3000 topics that they constitute a *full* collection of the relevant passages in the great books. But the effort to check errors of omission was diligent enough to permit the claim that the references under each topic constitute an adequate representation of what the great books say on that subject.

In terms of this standard, the principle of sufficiency operated to question the retention of topics whose references, judged to be an adequate collection, did not seem to make a substantial contribution to the great conversation as a whole. At various stages of work, topics were rejected for insufficiency in content. Those which remain meet the standard of sufficiency in two ways: the references they subsume have been judged to be an adequate representation of the great books on that subject; and as represented by these references, what the great books have to say has been deemed of sufficient substance for consideration.

THE APPLICATION OF THESE THREE CRITERIA was necessarily affected by the different kinds of topics under which the references were placed. For example, the standard of sufficiency could not be the same for a restricted doctrinal topic as for one designed to comprehend every variety of doctrine. A topic restricted to the doctrine of a single author or a small group of authors was judged to have sufficient content if the references adequately represented that author or group.

The principles of coherence and relevance did not operate in the same way for simple and complex topics. In the case of complex topics, involving two or more related points, one passage might be relevant through its bearing on one of these points, and another passage, through its bearing on some other point. Thus the coherence of all the references under a complex topic had to be judged differently from the coherence of those under a simple topic.

Though the topical ideal was comprehensiveness (which meant being open to all sorts of books as well as every variety of doctrine), it was not always possible to formulate topics which had such comprehensive coverage. As already indicated, some topics were construed more narrowly and some more broadly; some were restricted to discursive passages and some were open to both discursive and exemplary passages; some were developed under a strict policy of referring only to passages right on the point and others were developed under a looser policy of referring to passages having a more remote relevance to the point, perhaps even dealing with peripheral matters.

According to these and other differences among the topics, the three principles had to be differently applied as the exigencies of each topic demanded. Relevant references were sometimes rejected because of the policy governing the construction of a particular topic. The degree of coherence achieved in certain topics was much greater than that in others. In general, however, it can be said that the more complex the topic, or the more comprehensive the range of its references, the more its references will vary in degree and type of relevance. Less coherence was required for such topics than for more restricted ones.

IN THE LIGHT OF THESE GENERAL PRINCIPLES, qualified as they must be for different kinds of topics, the following, more particular points can now be made about the references assembled under any one topic.

(1) *The order of the authors cited.* Under each topic the references are arranged in the order of the volumes in the set. This places the authors in a roughly chronological order. In two respects, this order deviates from strict chronology. References to the Bible are always placed first, in spite of the range of time covered by the books of the Old and New Testament. To have placed these books in a more accurate chronological relation to the other books would have divided the references to the Bible into several distinct groups.

The other reason for deviation from strict chronology is the association of two or more authors in the same volume. For example, the works of the three astronomers—Ptolemy, Copernicus, and Kepler—are published together in Volume 16. The position of this volume is determined by the date of Ptolemy, the earliest of the three. In consequence, though Ptolemy is rightly placed after Tacitus (Volume 15) and before Plotinus (Volume 17), Copernicus and Kepler are made to appear in the list prior to Augustine and Aquinas, who were, chronologically, their predecessors. The association of Galen with Hippocrates in Volume 10 displaces Galen by many centuries; Harvey is displaced by being combined with Gilbert and Galileo, as is J. S. Mill, by being combined with the authors of *The Federalist*. These are the major exceptions to strict chronology. For the most part, the reader who follows the order of the references under a particular topic will be following the discussion in the order of its historical development.

(2) *The order of the passages cited for a particular author.* Normally, a reference to the work of an author involves the citation of two or more distinct passages, often quite a large number. Each of these citations is a unit reference, making up the whole complex reference. The order of these unit references follows strictly the order of the pages in the volume to which reference is being made. When several works by one author are included in one volume, these works are arranged in chronological order, wherever that can be done. Hence if the complex reference to the works of a single author involves the citation of passages from several of his works, these passages will usually be cited in the order in which they were written.

For the reader, the importance of this fact is negative. The order in which passages are cited is *not* the order of their significance as contributions to the discussion of the particular topic. When many passages are cited, they are not all of equal substance. Some are capital texts, expressing the essence of the author's views on the subject. Others are subordinate texts which add qualifications, amplify or extend the major discussion, or may be of quite peripheral significance.

The reader cannot understand or assess the contribution of a particular author to a given topic until he has distinguished for himself the capital from the subordinate texts. The order in which the various passages are cited does not help him to do this. Their arrangement by pages rather than by importance was a practical necessity. Knowledge of this warns the reader that the first passages to which the references direct him may not be—in fact, they seldom are—the principal ones.

(3) *Whole and part citations.* References to a given work may be either to the whole work or to a part; and part citations vary in length from a large section, such as a book or chapter, to a small passage, consisting of a series of paragraphs or a single paragraph or even less. In the case of scientific and philosophical writings, whole works are very infrequently cited, though large sections, ranging from a whole book or chapter to a number of such divisions, may often be referred to. The citation of whole poetical or historical works is more frequent.

The reason for this difference lies in the difference, to be considered presently, between the relevance of discursive or expository passages and that of narrative or exemplary passages. In advance, it need only be said that the primary relevance of a narrative work, whether an epic or a dramatic poem, a novel or a play, usually consists in the exemplary significance of the whole narrative. This is less true of historical than of fictional narratives. Historical episodes, occupying a few pages of an historical work, are more frequently cited for their exemplary significance than are whole historical narratives; whereas in the case of fictional or poetical narratives, often nothing less than the whole story will make the point, though here, as with histories, episodes may also be cited.

In contrast, for expository or discursive relevance, it is seldom necessary to cite the whole of a scientific, philosophical, or theological work; and even the citation of large parts is necessary less frequently than for historical and poetical works. A short series of paragraphs, a small paragraph, or even a few compact sentences will often make the point adequately.

Thus, the amount of reading recommended by the references under a particular topic varies, not only with the number of unit references contained under that topic, but also with the number of whole works and large parts cited, in proportion to the number of relatively small passages. It may be thought that the citation of whole works or even of large parts tends to defeat the purpose of the Syntopicon, since no reader can reasonably be expected to read this much in the course of a syntopical reading of the great books in relation to a particular topic. But the purpose for which whole works or large parts are cited does not require them to be read every time they are referred to.

It is assumed that the reader will gradually acquire acquaintance with whole works, and will then appreciate somewhat the significance of references to whole works or large parts without re-reading. Furthermore, even prior to such acquaintance with whole works, these references inform the user of the Syntopicon of the range of literature relevant to a particular topic, even if, at the time, they necessarily leave him in ignorance of some of the content.

In other words, the citation of whole works by title performs a useful function, even if all the recommended reading cannot be done at one time. The shorter passages cited can be read and will provide an indication of the content of a topic, so that the user of the Syntopicon will have the background and the motivation for doing the more extensive reading that may have to be postponed. Not to have cited whole works or large parts, simply because of the extent of reading involved,

would have resulted in a distorted and inadequate representation of the relevance of the great books to many topics.

Several devices were used in constructing the references to help the reader in handling references to whole works or large parts.

The first simply enables him to recognize at once whether a reference cites a whole work, or a large part of it as a whole unit. As indicated in the Explanation of Reference Style, when the page numbers immediately follow the title of a work, without separation by a comma, the reference is to the work as a whole. Similarly, when a chapter or other part of a work is cited, and the page numbers immediately follow, without separation by a comma, the reference is to that part as a whole. The presence of the comma indicates that the reference is to some passage in the whole work, or in one of its parts. The absence of the comma notifies the reader that he is being referred to a whole work or to the whole of one of its parts.

The second device is the use of the symbol *esp* which stands for "especially." Frequently the citation of a whole work or a large part is accompanied by a number of references to short passages within these wholes. These references to smaller parts are preceded by the symbol *esp*. This is done where it is feasible, so that the reader, without reading the whole, can go immediately to the places where the author makes his point in compact form or most emphatically. However, the passages especially cited-- even a long series of them-- can never be taken as an adequate substitute for the whole.

The third device serves a purpose quite opposite to that of the second. It was not always possible to cite a number of short passages for special reference within a large whole. This could be either because nothing less than the whole work was relevant to the topic, or because the passages which showed the relevance of the whole were so numerous and so diffused throughout that an enumeration of them would be impracticable. In the latter case, the symbol *passim* was used to notify the reader that he could discover the relevance of the whole by beginning to read almost anywhere within its boundaries, and by reading as much as seemed to suit his time and interest. When the citation of a whole work, or of a large part, is unaccompanied by either *esp* or *passim*, the reader is offered no alternative to reading the whole.

(4) *The boundaries of the references.* The problem of boundaries occurs only for references to passages which are less than a whole work, or a whole part, such as a whole chapter or section. In the case of wholes, the boundaries indicated in the references are, of course, the opening and closing pages. But for any passage which is less than a recognizable part or section of the work, the boundaries aim to give the user of the Syntopicon a unit of reading which combines maximum brevity with maximum intelligibility.

Ideally, the passage cited should begin at whatever paragraph or line the relevant material begins; and it should end, similarly, with the paragraph or line after which the material ceases to be relevant. The method of citing half-pages for

volumes printed in a single column of type, and quarter-pages for volumes printed in a double column—described more fully in the Explanation of Reference Style—made it possible for the references to indicate the initial and terminal boundaries of a passage with some precision. But to locate the beginning or end of a passage within a quarter- or a half-page still leaves a margin of uncertainty, and so the reader must often exercise some judgment to decide precisely where the passage begins and ends. The boundaries of the passage are given with absolute precision only where the reference includes line numbers. In all other cases, the boundaries are only approximately indicated.

The Explanation of Reference Style explains how boundaries are shown by page numbers and sections, and by author's divisions and line numbers. The problem to be discussed here concerns the editorial effort to combine maximum brevity and maximum intelligibility in the determination of boundaries.

These two aims were often in conflict: there was always the risk of diminishing the intelligibility of the passage by narrowing its boundaries for the sake of brevity or compactness; there was always the opposite danger of introducing diffuseness and even irrelevance by extending the boundaries for the sake of making sure that the passage would be adequately intelligible. No rule could be formulated for effecting the compromise which would always *maximize* both values. In fact, the determination of boundaries called for a different kind of judgment in referring to different authors, and even to different works of the same author. It was much easier for certain types of writing than for others—easiest, perhaps, for the mathematical and scientific works, most difficult for the poetical and historical works, especially in the citation of narrative passages having exemplary relevance.

It cannot be expected that boundary problems were always perfectly solved. In a certain proportion of the references, the passages may be either too long or too short. But even in these instances the margin of error is probably not very great—not enough to put the user of the Syntopicon to much trouble or inconvenience.

(5) *Kinds of passages and kinds of books.* We have already referred to the difference between the relevance of discursive or expository passages and the relevance of narrative or exemplary passages. This is a distinction which divides all the references into two main groups. No matter what the type or meaning of the topic under which it is cited, every passage cited is relevant in one of these two ways. It either discusses the topic or illustrates its meaning. Sometimes the same passage does both, though it usually is predominantly of one sort or the other.

It might at first be thought that the great books would also divide into two groups—those providing expository and those providing exemplary passages. To some extent this is true. Since they are essentially discursive writing, the great works of mathematics, experimental science, social science, philosophy, and theology naturally tend to yield references which have expository relevance—expounding, explaining, analyzing, affirming, denying, doubting, arguing. The

great works of poetry or fiction, of history and biography, being narrative in form, naturally tend to yield references which have exemplary or illustrative significance. But there are important exceptions in both cases.

The great narrative works, whether poetical or historical, contain essentially discursive passages. The fictional or historical characters in the narrative think and speak about a vast number of the themes which constitute the topics of the 102 chapters. Wherever, in the course of a narrative, men speak or think in an orderly sequence, such speeches or trains of thought may have discursive relevance to one or more topics. Furthermore, in many of the great poetical and historical works, the author speaks in his own person on themes germane to his narrative. These passages are, of course, discursive and may have expository relevance.

On the other hand, the great discursive works of science, philosophy, and theology contain passages which are exemplary or illustrative in their significance. These passages differ in one important respect from the illustrative materials in the poetical and historical works. They are seldom, if ever, narrative in form. For example, a scientific treatise will contain descriptions of experiments performed; a mathematical work will contain particular demonstrations; and such passages may have exemplary or illustrative significance for a topic dealing with scientific theory or method.

There are a few exceptions to the rule that expository or discursive works do not contain narrative passages which can be cited as exemplary. The myths and stories told in the dialogues of Plato are certainly narrative in form. But these passages almost always contain material which is implicitly, if not explicitly, discursive. They are among the best instances of writing which seems to have both sorts of relevance to the same topic. Other instances are passages containing descriptions of scientific experiments, accompanied by theoretical comments of general significance.

The Bible is unique, perhaps, in respect of the frequency with which its passages combine both sorts of relevance. There are, of course, many purely narrative passages in the Old and the New Testaments, as there are many which seem to contain preachment or precept exclusively. But a very large number of biblical passages combines example with precept, or parable with preachment. It may even be said that the most famous and striking passages in the Bible transcend the distinction and have a type of significance or relevance uniquely their own.

Nothing in the way a given reference is symbolized or recorded notifies the user of the Syntopicon which kind of passage is being cited. In a few instances, he may be able to guess what to expect from the nature of the work referred to. If a narrative work is cited as a whole, or even in any large part, its significance for the topic will almost necessarily be exemplary rather than expository. But if the passage cited is relatively small, then, even in a narrative work, the passage may be either expository or exemplary. In general, this is also true of the citation of all, or large parts, of expository works. Here, as before, relatively small passages may be of either sort. Where no clue is provided by the general character of

the work being cited the user of the Syntopicon can discover the significance of the passage only by reading it.

(6) *Series of references which have collective significance.* It has already been pointed out that the references under a particular topic are unequal in their relevance to it. References were sometimes rejected because their relevance was too remote or slight. But sometimes an opposite policy was followed. A reference which, by itself, might have been judged insubstantial or remote took on greater significance when read in the light of other references under the same topic. In consequence, it was retained, both for what it added to the whole collection of references and for its own increased significance as a member of that collection.

A collection of references, possessing a certain unity through the inner relation of its members, was most frequently constituted by a series of passages from the works of a single author. But sometimes references to one author were judged in the light of references to others. A given author's contribution to the discussion of a certain topic might be slight if taken by itself, but it gained interest in relation to the utterances of others on the same topic; and so otherwise slight passages were retained because of their value as members of the whole collection of references under that topic.

This information about the way in which the references were often constructed to achieve a collective effect may help the user of the Syntopicon. One who examines *all* the references under a topic will usually find that some of the authors cited are major, and some minor, contributors to the discussion. He will also find that, for a single author, some passages referred to make a major, and some a minor, contribution.

The person who has read through all the passages bearing on a topic will have little difficulty in discriminating between the major and the minor voices in the great conversation on that theme. The elements of the collection will tend to assume their proper places and proportions. But to one who is still in the process of reading the passages in the order in which they are cited, the collective significance of the whole, and of each part as a member of it, will not be apparent.

Such a person will encounter many passages whose content does not seem to justify their inclusion. If he bears in mind that a passage may have more significance within the collection than it has alone, he will suspend judgment on its worth until he has gone further in his reading under that topic. Unless an error was made, the questionable passage is there because it was judged that the reader would eventually see more of interest in it than first meets the eye, by re-reading or remembering it in the light of other passages.

The chapter on MAN contains a good example of a large collection of references which have more significance collectively than they do individually. The topic reads: "Cultural differences among men: Greek and barbarian, Jew and gentile, European and Asiatic." Of the more than one hundred passages cited, it can almost be said that no single one by itself deals adequately with the subject of cultural differences among men, or even with the specific cultural differences

mentioned. But references to the Bible form a significant collection on the distinction of Jew and gentile, and so do those to Gibbon. The series of references to Herodotus, Thucydides, Plato, Aristotle, and Hippocrates forms a significant collection on the distinction of Greek and barbarian. The references to Montesquieu and Hegel are significant on the distinction between European and Asiatic. Some of the references to Hegel, taken together with those to Darwin and Tolstoy, form a collection which illuminates the subject of cultural differences in general. Thus the whole set of references is adequate to the topic in a way that no single reference or small group of them is.

A collection of references may also be used to achieve an intelligible rendering of the contribution of narrative works, poetical or historical. Where the whole narrative could not be cited, it was often possible to select a series of episodes—particular scenes and events—which, read successively, would have the cumulative effect of illustrating the topic. This is often the point of a long series of references to Herodotus, Tacitus, Plutarch, and Gibbon, or to Homer, Virgil, Dante, Milton, Tolstoy, Dostoevsky, and Melville.

With discursive works there was less necessity for grouping references to achieve a cumulative effect. But even here it was often true that only a certain number of the passages referred to had independent significance, whereas others depended for part of their significance on the context provided by the collection. However, it should be added that, for most of the great works of science, philosophy, and theology, the number of passages which could be cited for their independent significance exceeded the number which could be cited only in the context of others.

IN THE LIGHT OF THESE CONSIDERATIONS, two general rules can be formulated to guide the reader in interpreting the materials recommended for his reading

1. The location of a passage under a topic reflects the judgment that it is relevant in some manner and degree to the subject in question; but it does not indicate the kind of relevance, or whether the relevance is dependent on other passages. The reader must discover that for himself.
2. To discover the significance of a particular passage, the reader must consider it in relation
 - a.* to the kind of book from which it is taken;
 - b.* to other passages from the same book, or other books by the same author;
 - c.* to passages from other authors cited under the same topic, with some attention to their chronological order, and to the kinds of books written by the different authors being considered;
 - d.* to the collective significance of the whole set of references.

One other observation should be added. Very frequently the same passage is cited under different topics of one chapter, as well as under the topics of different

chapters. The user of the Syntopicon may meet the same passage many times as he goes from topic to topic, or chapter to chapter. A moment's reflection will discover the reason for this.

A passage rich in content is naturally relevant to a large number of different topics, and deserves as many different readings as are necessary to exhaust its meanings. Each topic under which it is cited directs the user of the Syntopicon to read the passage in a different way—interpreting it in the light of that particular topic. A previous reading of the passage in another connection will usually not suffice for an understanding of its relevance to the topic under which it now appears.

This is particularly true of passages open to conflicting interpretations. Such passages will appear, in the same chapter, under topics which express a conflict of theory or opinion, and must be examined in the light of these topics if the reader wishes to discover how they are susceptible of such conflicting interpretations.

WE MUST NOW CONSIDER A NUMBER OF EXCEPTIONS to the rules just stated. The rules may guide the user of the Syntopicon in interpreting what he will normally find in the references, but they do not take account of deviations from the norm. Perhaps these deviations can be best described by enumerating the three kinds of special problems which arose in constructing the references: (A) those caused by the special character of certain topics; (B) those caused by the special character of certain books; and (C) those caused by considerations of scholarship or by difficulties of interpretation.

(A) PROBLEMS CAUSED BY THE SPECIAL CHARACTER OF CERTAIN TOPICS

(1) *The distinction and relation between supraordinate and subordinate topics.* This distinction has already been sufficiently explained in the section of this Appendix dealing with the topics (see pg. 1247). The supraordinate topic is a heading under which the subordinate topics logically fall, as making particular points or as elaborating the meaning of the supraordinate. But some supraordinates function *only* as logical headings for a number of subordinates, whereas other supraordinates function also as topics *in their own right*.

The supraordinates which are only headings have no references cited under them. They are, from the point of view of content, empty. All other supraordinate headings have references under them, just as their subordinates do. But because of their special character as supraordinate topics, their reference content tends to differ from that of subordinate topics.

Supraordinate topics were used to collect in one place all passages dealing in general terms with points treated in particular terms in the passages cited under the subordinate topics; *or* they were used to list references to whole books or large parts of books, while references under the subordinate topics cited shorter passages.

These methods of developing a supraordinate topic were frequently combined. When a supraordinate was developed according to either or both methods, its references tend to cover the same ground as do those of all the subordinates together. The supraordinate will refer to the most general or the most inclusive passages which are divided among the various subordinates. Since the subordinate topics state particular points, or cover parts of the whole subject indicated by the supraordinate, they will contain many passages not cited under the supraordinate.

The usual difference in reference content between a supraordinate topic and its subordinates is this: the passages cited under the supraordinate cover, without distinction, all the points which are divided among the subordinate topics; the passages cited under each of the subordinates were selected to distinguish the discussion of one of these points from that of others.

One example may clarify the relation between supraordinate and subordinate topics. In the chapter on LANGUAGE, the Outline of Topics opens as follows:

1. The nature and functions of language: the speech of men and brutes
 - 1a. The role of language in thought
 - 1b. The service of language to society
2. Theories of the origin of language
 - 2a. The hypothesis of one natural language for all men
 - 2b. The genesis of conventional languages: the origin of alphabets

The two subordinate topics (1a and 1b) make particular points generally covered by the first clause in the wording of supraordinate topic 1. Similarly, in supraordinate topic 2, the two subordinates (2a and 2b) deal with particular aspects of the theory of the origin of language. Accordingly, the reference content of topics 1 and 2 will include much that will also be found under 1a and 1b, 2a and 2b, but without any discrimination of the particular points which their references provide.

Some of the reference content of the supraordinates will not appear under either of the subordinates, because certain passages are so general as to be relevant only to the supraordinate topics. Similarly, certain passages, because particular in their significance, have relevance only to the subordinates, and appear only there.

Topic 1 in the chapter on LANGUAGE happens to illustrate another point which holds true for a number of supraordinate topics. Topic 1 is complex. The part preceding the colon states the main theme; the part following, a subordinate theme. The subordinate theme is itself a special point in the general discussion of the nature and functions of language. Hence it is mainly the first part of topic 1 which functions as a supraordinate for topics 1a and 1b.

The reference content of this complex supraordinate topic will therefore include, besides those passages that belong in a supraordinate, passages relevant to the narrower, special point made in the part of the topic following the colon.

These passages will not reappear under the subordinate topics, unless they are relevant there for other reasons; as, for example, a discussion of human and animal societies might deal, in this connection, with human speech and animal cries. What is true of this complex supraordinate topic holds generally for all complex supraordinates which in part state general themes that cover the particular points made in the subordinate topics, and also in part state particular themes of their own.

One other kind of topic, which is not strictly a supraordinate because it has no subordinates under it, sometimes resembles the supraordinate topic in the range and character of its reference content. That is the opening topic of a chapter, which frequently stands alone. For example, in the chapter on CITIZEN, the opening topic—"The individual in relation to the state"—has no subordinates; neither does the opening topic in the chapter on CONSTITUTION—"The difference between government by law and government by men: the nature of constitutional government."

Both of these opening topics have maximum generality for the range of discussion covered by the whole chapter. In a sense, therefore, they can be regarded as logically supraordinate to all the topics which follow. Accordingly, such opening topics will include among their references many passages that will be cited again under later topics.

In the light of the foregoing consideration of supraordinate topics, the following recommendation is made to the user of the Syntopicon. If he is interested in the whole ground covered by the supraordinate topic together with its subordinates, he will generally find it profitable to examine first the passages cited under the supraordinate. If, however, his interest is only in some particular point treated in one of the subordinates, he can go directly to the passages cited under that topic. He can supplement this later by turning to the broader materials referred to under the supraordinate, or even, perhaps, by turning to the materials cited under other subordinate topics. In general he should bear in mind that references listed under a supraordinate will more frequently cite whole books or longer selections therefrom, than will references listed under the subordinates.

(2) *Restricted or doctrinal topics.* Ideally, a topic should be phrased so as to comprehend every variety of relevant doctrine, and include materials from every type of book. But as we have already observed (see pg. 1239), a certain number of topics fall short of this ideal of comprehensiveness. Either their wording restricted them to the doctrine of one particular author or a special group of authors; or they were construed strictly, rather than broadly, so as to exclude certain types of material. Usually, the strictly construed topics excluded passages of exemplary rather than discursive relevance.

These facts about restricted topics are repeated here merely to advise the user of the Syntopicon not to expect the same range of materials in the reference content of all topics. For example, he should not always expect to find exemplary passages along with expository ones; though, had the topic been construed less

strictly, such passages might have been there because they are relevant. Nor can he always expect to find all the passages with discursive relevance to a particular subject, if its treatment has been divided among a number of separate doctrinal topics. In such cases, he must look to a whole group of related doctrinal topics to cover all the relevant authors and books.

Even within a single topic, different authors were sometimes treated differently because the special contribution of each could be most effectively handled in a somewhat different manner. For example, one author might be cited only for his major utterances on the subject, whereas another might be represented by an almost complete collection of the passages from his works, including those of minor as well as those of major relevance. This was the result of a judgment that, on the topic in question, one author's complete position should be examined, while, for another author, only that portion of his work which bears directly on the subject need be considered.

One other special point deserves mention here, though it does not belong to the problem of the restricted topic. Certain topics, as noted (see pg. 1237), state comparisons, contrasts, distinctions, or differences. Ideally, to be relevant to such a topic, a passage should deal explicitly with the comparison, etc. But not all the references listed under such topics cite passages explicitly on this point. Some deal explicitly with just one of the terms being compared, and involve the other only by implication; sometimes they do not consider the other term even by implication. These passages are cited on the ground that the comparison proposed by the topic is to be found in the set of references as a whole, if some passages deal with one and some with the other of the terms to be compared.

In a few rare cases of topical comparisons or distinctions, no passages could be found which made the comparison or distinction explicitly, and yet the sense of the tradition on that point could be gathered from a series of passages dealing with one or the other of the two terms.

(3) *Contrary or contradictory topics.* Quite frequently a supraordinate topic states a problem or issue on which there are a number of opposed points of view; the subordinate topics severally state the opposite views. Sometimes a general subject of inquiry is announced by the supraordinate topic, and its subordinates propose various theories of the matter, contrary to one another in some way.

Such sets of topics presented a special problem in constructing the references. In the ordinary case in which a topic not only stated the issue but aimed to cover all controversial positions taken on it, the set of references was developed to include both affirmations and negations of the point at issue; or all sides of the controversy. But when a number of topics explicitly set forth the controversial positions, the reference content of each topic was restricted in the following way.

Passages which expressed a view in any way contrary to the view stated in the topic were not cited, on the ground that some other topic, stating that contrary view, was the proper place for the citation of the contrary position. But if a particular author, in developing his own theory explicitly commented on the position

of an adversary, the passage containing that explicit commentary was judged relevant to both topics—the topic stating the view opposed by the author as well as the one stating his own view. If, however, an author's expression of his own opinion constituted the denial of some other view *only by implication*, the passage in which that author's opinion was expressed was cited only under the positive topic and not under the contrary one as well.

A glance at the structure of the Outline for a particular chapter, and a quick examination of the wording of its topics, will tell the user of the Syntopicon in which way controversial issues were handled—whether by single topics covering all sides of the controversy, or by separate topics representing opposing sides. In the former case, the reader can expect to find contrary views expressed in passages cited under a single topic; in the latter, he will find only affirmative opinions in the passages cited under each of a set of contrary topics, and perhaps also explicit criticisms of each position by its adversaries.

(B) PROBLEMS CAUSED BY THE SPECIAL CHARACTER OF CERTAIN BOOKS

(1) *The Bible*. No other book in the western tradition has been subject to such extensive interpretation, or to interpretation based on such incompatible principles as, for example, on the one hand, the principles of higher criticism which treat the Bible as a secular document, and, on the other hand, the principles of exegesis peculiar to a text considered to be the sacred and revealed word of God. Let us deal with this second point at once, since it is paramount for the significance of all references to the Bible.

The Bible, especially the Old Testament, is to a certain extent an historical book. It reports the events of Jewish history; it describes the customs of the Jewish people and the gentiles with whom they came in contact; it deals with the political and social institutions of the Jewish tribe, the Jewish state, and the kingdoms of Judah and Israel. Biblical passages of an historical tenor were, therefore, found relevant to topics dealing with customs, social practices, and political institutions. But citing them under such topics did not prejudice the issue whether the Bible is sacred writing or merely an historical record, like any secular history.

Those who, in the light of their religious faith, read the Bible as Sacred Scripture do not exclude the historical or literal sense as one mode of interpreting it. On the contrary, they usually insist that the literal or historical sense must be the basis of all other interpretations—allegorical, anagogical, and moral.

Nor is the issue of the two approaches to the Bible prejudged by any other aspect of its treatment along with references to the works included in *Great Books of the Western World*. No matter what the topic under which the Bible is cited, the reader is always left quite free to decide that issue for himself. He can always read a biblical passage *either* as a portion of divine revelation, *or* as human writing no different from other human literature.

This is true even when the Bible is cited under topics which explicitly state a religious position, either one common to Judaism and Christianity, or one exclusively Jewish or Christian. The reader is still free to interpret the passage either as conveying the divine revelation of the religious dogma in question, or as conveying the opinion of Moses or Isaiah, of Matthew or Paul, on the subject.

Of course, a passage will not have the same meaning when read as the revelation pertinent to an article of religious faith, as when it is read as the merely human formulation of a religious tenet; but then, though perhaps to a lesser degree, passages from other books have different meanings for the man of religious faith and for the man without it.

A second problem concerning the Bible was that of choice among different, and often conflicting, interpretations of particular passages, especially those whose meaning has been much disputed throughout the tradition of biblical commentary. This problem was solved, as was the first, by *not choosing* between conflicting interpretations. If a particular passage, on one traditional interpretation, was relevant to a certain topic, it was cited there. If, by another traditional interpretation, it was also relevant to another topic, even one contrary in tenor to the first, it was cited there also. This permits the reader to consider both interpretations and judge between them.

Since biblical exegesis is, in a sense, an endless process, it may be asked what limits were set to placing diverse interpretations on a particular passage. The answer is that the work of citing the Bible was governed, in large part, by well-established traditional interpretations; and where these were not available, the judgment was nevertheless made in conformity with generally accepted standards of interpretation and by analogy with the interpretation of similar passages.

Still another problem concerned Christian interpretations of Old Testament passages which do violence to the Jewish sense of their meaning. Such passages were treated in the light of both interpretations. Therefore, the user of the Synopicon should not be surprised to find passages from the Old Testament cited under topics which state specifically Christian doctrines denied by the Jewish faith. These references do not prejudice the theological issues between the two historic religions of the West. Failure to cite these passages in their Christian as well as in their Jewish sense would have meant failure to present these issues, so far as the Bible is concerned.

Finally, there was the somewhat parallel problem of conflicting interpretations within the Christian tradition itself, as between the Roman Catholic and the Protestant interpretations. In general, the problem was solved in the same way as that of Jewish versus Christian interpretations of the same texts. But this problem was complicated by the incorporation of the divergent interpretations in two English translations of the Bible—the Douay and the King James.

Not only are some crucial passages quite differently rendered in the two versions, but the books of the Bible itself are often differently named or numbered, and differently ordered to one another. Certain books which the Douay version treats as parts of the Old Testament, the current King James translation treats as

Apocrypha. Even within particular books, the numbering of chapters and verses is frequently different.

Hence it was necessary to refer to both the King James and the Douay versions whenever there was even the slightest variance between them. (This complication in the mode of citation of biblical passages is more fully treated in the Explanation of Reference Style.) To whatever extent the treatment of the Bible approaches adequacy, the thousands of paired citations, giving King James and Douay equivalents in book, chapter, and verse, constitute a concordance between the Protestant and Roman Catholic renderings of the Bible.

This method of citing the Bible according to both versions whenever they varied led to one difficulty for which there was, finally, no satisfactory solution. In a small number of cases, the wording of a passage in one version made it relevant to a topic to which it was not at all relevant according to the language of the other version. Under such circumstances, to cite the passage would be to prejudge for the reader the rightness of one version as against the other. Avoidance of this meant omitting some few passages which readers of one version would know, and think relevant to the topic under which it was not cited. What was thought the less unsatisfactory of the two solutions was chosen. The error of omission was judged less grievous than the violation of the Syntopicon's rule of dialectical objectivity, which demanded most insistently to be followed in such cases of conflicting interpretation.

Errors of omission of this sort were unavoidable. But they were, in the very nature of the case, not the only errors of omission, since it was never possible to be sure that all traditional interpretations of the Bible, from whatever source, had been taken into account, much less all the possible interpretations to which biblical passages are subject. Furthermore, the references to the Bible will be judged by many critics of quite different persuasions to contain grave errors of commission—serious misinterpretations of difficult texts which, in consequence, have been assigned to topics where they do not belong.

The decision to include references to the Bible along with those to the works published in *Great Books of the Western World* was made with all these risks in mind. It seemed better to undertake this task, whatever defects or errors would certainly remain in the finished work, than not to have the voice of the Bible present in the great conversation. More than half the authors in this set quote the Bible, refer to it, or write with the Bible in mind. The Bible could not be omitted from the references under many topics to which it is relevant and wherein the other books assume its presence.

(2) *The poetical and historical books.* Next to the Bible, the great narrative works of history and fiction presented the greatest difficulties. What was done here may be the subject of much controversy. It may be held that the meaning of poetry—and, to a lesser extent, of history—cannot be comprehended under ideas or topics. It should be said in reply that it is not claimed that the meaning of a poem like the *Iliad*, the *Divine Comedy*, or *War and Peace*, is exhausted by references

which cite it as relevant to the consideration of certain ideas and topics. The same disclaimer applies to the histories of Herodotus, Thucydides, Tacitus, and Gibbon, and to the biographies of Plutarch.

A brief statement of the theory governing the syntopical treatment of such works may indicate some of the difficulties, and prevent some misunderstanding of what was done. The controlling theoretical insight was that abstract and concrete, universal and individual, are everywhere correlated. For example, the fictional character and actions of Achilles, in the *Iliad*, are ideas in concrete or particular embodiment. The historical episodes, reported by Thucydides, in the struggle between democracy and oligarchy in the Greek city states, present individual instances of certain universal propositions in political theory. Again, many passages in his *History of the Peloponnesian War* concretely exemplify the problems of might and right in the relation of states to one another.

A political theorist would state these issues abstractly and universally and would, perhaps, formulate general conclusions as to the consequences of trying to combine democracy with imperialism. A poetical historian, like Thucydides, makes such points concretely by telling the tragic story of what happened to democratic, imperialistic Athens.

To say that the whole of the *Iliad* can be cited under a topic on the relation of men and gods, or that particular scenes or episodes can be cited under topics dealing with honor or pride or love, is not to say that the poetic meaning of the *Iliad* can be exhaustively comprehended by such references, even if they were themselves exhaustive of its content so far as that is relevant to the ideas and topics of the Syntopicon.

To say that the *History of the Peloponnesian War* can be cited as a whole under certain topics in the chapters on JUSTICE or LIBERTY, and to say that particular events in it can be cited under topics dealing with treaties between states, military strategy, or political revolution, is not to say that such references, even if complete, would exhaustively represent the content or significance of the *History*.

But neither is it claimed that the references to the great scientific and philosophical works exhaust their content or meaning. No more is claimed for any work of either kind—narrative or discursive—than that the references to it represent, more or less adequately, its contribution to the great conversation, on as many themes as it may have relevance for. So far there is no difference. The difference lies simply in the mode of relevance. What one kind of work says abstractly, in terms of general propositions and universal concepts, the other kind says concretely, in terms of individual characters and particular actions or events.

The whole theory of the references to fictional and historical narratives under ideas and topics, rests on the logic of example. Logically, to exemplify is to present individual or particular instances of a universal concept or a general proposition. To abstract or generalize is the logical opposite of exemplification: it consists in stating the universal concept or general rule which applies to a particular case, and embraces all similar particulars as well. Without going further into the logic of universal and particular, of abstract concept and concrete ex-

perience, let it suffice to say that the references in the Syntopicon which have discursive relevance move on the plane of the abstract and the general; whereas the references which have exemplary relevance move on the plane of the concrete and the particular.

The basic theory underlying the collocation of references to expository and narrative works under the same topics is simply that the two planes run parallel to one another. They are at all points correlative expressions of the same thing. They are as inseparable from one another, and as indispensable to one another, as human thought and human experience. Nothing which can be grasped by the human mind on one plane is incapable of expression on the other; in fact, nothing can be grasped by the human mind on either plane without also being available to insight or experience on the other.

Using this theory as a basis for the syntopical reading of the great poetical and historical narratives did not prevent or solve all difficulties in the treatment of particular works. It is impossible to give a brief account of these difficulties, since they were as various as the works themselves. Each narrative seemed to raise problems of its own. It should be reported, for whatever guidance it gives the user of the Syntopicon, that all problems were not solved with equal success.

The references to Tolstoy's *War and Peace*, for example, seem to be a better indication of its exemplary relevance to the topics, than those to Dostoevsky's *Brothers Karamazov*. The same difference appears between Milton's *Paradise Lost* and Goethe's *Faust*, or between Gibbon's *Decline and Fall of the Roman Empire* and the *Histories and Annals* of Tacitus. These works may have presented unequal difficulties; some may have yielded more readily to a syntopical reading than others. The other alternative is that the syntopical reading of these works was not equally well or imaginatively done. In any case, reading the narrative works to discover their exemplary relevance to the topics was always a more difficult task than reading them for their discursive relevance.

A word should be added here about this second type of reading to which the narrative works were submitted. A speech by Pericles or Hamlet can have the same kind of relevance to a particular topic as a statement on it by a philosopher or a theologian. The poetical and historical works are rich in discursive relevance to many topics, especially those dealing with moral and political subjects, and hardly less so with respect to metaphysical and theological themes.

But one distinction must be kept in mind in considering references to the thought contained in narrative works. The thought of Pericles or Hamlet is not the thought of Thucydides or Shakespeare, at least not in the sense in which the discourse of Marcus Aurelius, Montaigne, Darwin, Marx, or William James expresses the thought of an author speaking in his own person. Sometimes an historian or poet speaks in his own person as well as through his characters. Thucydides does, and so does Gibbon; Fielding and Tolstoy are at some pains to distinguish their own reflections from the thoughts of their characters. In other cases, no such distinction can be found because the author did not make it. In all the plays of Shakespeare there is no word from the poet himself as distinguished from the utterances of his characters.

What Shakespeare himself has to say is said only by his plays, and only through the exemplary significance of narrative, of character and action. In contrast, Tolstoy speaks in two ways—in an exemplary fashion through narrative of character and action, and discursively through the passages in which Tolstoy himself discourses on a variety of subjects. In addition, both Shakespeare and Tolstoy have much to say discursively through the speeches of their characters. But this indirect mode of speech must always be distinguished from the author's own discourse, and certainly from the totally non-discursive—that is, the exemplary—significance of the poet's creation of plot and characters.

This distinction applies to a certain number of works not ordinarily classed as poetry or history. The dialogues of Plato constitute a striking exception to the rule that the scientific and philosophical authors speak in their own persons. The thoughts and speeches of Callicles, Gorgias, Thrasymachus, Alcibiades, or even Socrates himself, are not direct discourse by Plato.

Because they have the poetical form of dramatic narratives, the dialogues of Plato presented a very special problem. In one sense, they had to be treated like the plays of Shakespeare. A particular speech by a character in the dialogues was cited like a particular speech by a character in the plays—for its discursive content and without any judgment as to whether it expressed the thought of the author or the very opposite. But since there can be no question that Plato used the dialogues to express his own ideas, it was also necessary to construct the references to the dialogues so that they represented Plato's own opinions as well as those of his characters.

In many cases this could be done by following the line of thought in the speeches of that one character which Plato used as his *alter ego*. This was usually Socrates, but sometimes another, as, for example, the Athenian Stranger in the *Laws*. In other cases, it had to be done either by citing a sequence of discursive passages in which Plato's own argument or theory becomes clear, or even by citing a whole dialogue. These last two methods of representing the thought of Plato resemble the method of representing Shakespeare's thought by citing a sequence of dramatic episodes or the narrative content of a whole play.

But the difference in the treatment of Plato and Shakespeare is as important as the similarity. Whereas the representation of Shakespeare's thought was achieved only through the exemplary significance of whole plays or narrative episodes therefrom, the representation of Plato's thought was achieved mainly through the discursive significance of whole dialogues, or analytical and argumentative passages therefrom. However, in a few cases, a dialogue was cited for its narrative as well as for its expository significance; as, for example, the *Apology*, which tells the story of the trial of Socrates, or the *Crito* and *Phaedo*, which tell the story of his imprisonment and execution.

Though the dialogues of Plato are the most striking exception to the rule in the treatment of philosophical and scientific works, similar methods were sometimes employed in other cases. For example, the *Two New Sciences* of Galileo is written in dialogue form. Here, as with Plato, the opinions of the characters in the

dialogue were sometimes cited, even though they were plainly not expressing the opinion of Galileo.

The scientific and philosophical treatises of Aristotle are partly historical. They usually give an account of the thought of others, as well as expound Aristotle's own ideas. The references to Aristotle, therefore, include the citation of passages which report opinions with which Aristotle may disagree—for example, those of Parmenides, Democritus, Anaxagoras, or others. This does not involve passing judgment on the reliability of Aristotle's report. Aristotle's summary is often the main or only historical evidence on certain doctrines in antiquity. Were such passages not cited, the discussion of a number of topics would be less rounded than it is.

In only one case is an author's report of the views of others not cited in isolation from his comments thereon. That is the case of Aquinas. Since the statement of the objections--the opinions of others--in the *Summa Theologica* is always accompanied by replies, and each reply is paired with an objection, the objections are never cited by themselves.

(3) *The mathematical and scientific books.* The above paragraphs deal with the treatment of the expository works of science, philosophy, and theology, insofar as they presented problems like those presented by narrative works of poetry and history. Furthermore, we have already pointed out that particular demonstrations in mathematical treatises, or descriptions of particular experiments in works of natural science, were often cited for their illustrative significance under topics dealing with the theories or methods of mathematics and science. Such references do not differ, in mode of relevance, from those to particular episodes in narrative books. They exemplify the point of the topic under which they are cited.

But the mathematical and scientific books presented one difficulty peculiarly their own. For example, certain propositions in Euclid's *Elements* are relevant to a topic in the chapter on QUANTITY which deals with the relations of solids and with inscribed and circumscribed spheres. But these propositions are not intelligible apart from prior ones on the properties of the circle—propositions not strictly relevant to the topic in question. These should not be cited here, but under another topic in the chapter on QUANTITY which deals with circles.

No completely satisfactory solution could be found for the problem raised by the order of propositions in a mathematical treatise. On the one hand, to cite only the relevant propositions under a particular topic, and to omit reference to all the prior theorems on which their intelligibility depends, makes it necessary for the reader to discover these prior theorems for himself, if he wishes to understand the propositions cited. On the other hand, to cite, under a particular topic, not only the mathematical propositions directly relevant to it, but also all the prior demonstrations on which they may depend for their intelligibility, would almost always frustrate the user of the Syntopicon by making him begin his reading with propositions of no apparent relevance to the topic in question. He might have to go through a long series of propositions before he came to those bearing directly on the topic.

Of these two alternatives, the first was chosen as slightly less unsatisfactory. The user of the Syntopicon will at least see at once the relevance of the propositions cited; and, recognizing his failure to understand these propositions in isolation, he can remedy his difficulty by finding their logical antecedents. He needs only to know that, in the order of mathematical exposition, later propositions depend upon earlier ones for both their demonstration and their intelligibility.

This is true not only of strictly mathematical treatises, but also of all the great works in mathematical physics, such as Galileo's *Two New Sciences*, Newton's *Mathematical Principles of Natural Philosophy*, Fourier's *Analytical Theory of Heat*, and the astronomical treatises of Ptolemy, Copernicus, and Kepler. For example, in the chapter on ASTRONOMY, there is a group of topics on the particular heavenly bodies. One of these deals with the moon and its irregularities. Under that topic, Proposition 66 in Book I of Newton's *Principles* is directly relevant. But in Newton's exposition, Proposition 66 depends on at least thirty prior propositions. According to the policy followed, only the one relevant proposition was cited; the others were omitted because they were irrelevant, even though absolutely necessary to the understanding of Proposition 66.

Spinoza's *Ethics*, written *in ordine geometrico*—in the geometrical order—clearly indicates that this special problem is caused by the nature of mathematical demonstration. Its subject matter is metaphysical and moral, not mathematical, but the *Ethics* presented the same problem as Euclid's *Elements* or Newton's *Principles*, because it used an order of exposition in which propositions are logically related as prior and posterior. The method employed in referring to a mathematical work was therefore used also for Spinoza's *Ethics*, just as the method employed for Plato's dialogues was also applied to Galileo's. References to Spinoza's *Ethics* cite particular propositions without citing all the prior propositions on which they depend.

The problem of referring to propositions in works written in a mathematical manner is an aggravated form of the more general problem faced in treating all expository works, scientific, philosophical, or theological, as well as mathematical. As already pointed out, it was frequently necessary to cite a whole series of passages, some major, some subordinate, in order to present an author's thought on a particular topic adequately. The significance of many of these passages, especially the minor ones, depends on the context of the others; and since passages are always cited according to the order in which they occur, the user of the Syntopicon is often asked to read first something which gains significance only from materials to be read subsequently. But there are two differences.

In the case of works not written in a strictly deductive order, the passages cited first in a series of references may depend for their significance upon materials which come later, whereas in the mathematical or deductive order, later propositions always depend on earlier ones. In non-mathematical works, all the passages in a series have some relevance to the topic in their own right; whereas in mathematical works, the prior propositions are strictly not relevant at all.

(C) SPECIAL PROBLEMS OF SCHOLARSHIP AND INTERPRETATION

(1) *The problem of translations.* More than half of the works included in *Great Books of the Western World* are translations. If translations were always faithful to the sense of the original language, this would raise no problem. But, as every one knows, they are not. All translations are subject to suspicion, and almost none ever satisfies all competent scholars.

Scientific or philosophical works are generally better translated than poetic works. Translations from modern languages, such as Italian, French, and German, are usually better than those from ancient languages, and among the latter, translations from Latin are usually superior to those from Greek. It might almost be said that no Greek scholar is ever perfectly satisfied with an English rendering of Greek poetry or philosophy.

Even if the translations from Greek published in this set were the best available, it would still be true that certain passages, clearly relevant to particular topics in the English rendering, become less clearly relevant, or even irrelevant, when read in the Greek. The members of the staff who did the syntopical reading of the Greek books discovered this again and again.

They raised a difficult question. Were they to cite the passage according to its significance in the original Greek or in the English translation? If, whenever there was a variance between original and translation, the interpretation of the passage and its topical allocation were to be determined by the Greek wording, the user of the Syntopicon would find passages in the English translation omitted from topics to which they are relevant. If, on the other hand, the wording of the translation was to be the standard, the reader would find Homer, or Aeschylus, or Plato cited under topics to which, according to some good scholarship, they are not relevant.

At first this appears to be a choice between errors of omission and errors of commission. Actually, it was a deeper problem, involving a decision as to the purpose the Syntopicon could and should serve. Since the Greek books were being published in English, it would have been totally impractical to make the references depend upon the sense of the Greek. By reading the passages cited in English, the reader could not possibly discover why they were relevant to the topic; and, in addition, he would find relevant passages which were not cited. Since the purpose of the Syntopicon is to guide the reading of the great books as here published, the only solution, however unsatisfactory it may be in some respects, was to base the interpretation and topical allocation of passages on their sense in English translation.

This solution applies, of course, to translations from all foreign languages. But it is less unsatisfactory for the others than for the Greek books. It will not seem unsatisfactory in any case to the general reader with only English at his command. Since he must become acquainted with the great books in translation, the

Syntopicon serves him well by referring to them as if they were all written in English. The scholar may regret the distortions and errors necessarily consequent upon this policy, but he is in a position to correct such errors wherever he discovers them.

(2) *The problem of interpretation.* Almost all of the great books contain passages which, even when translated with absolute fidelity or when originally written in English, are difficult to interpret—passages on which there has been much scholarly commentary and on which competent scholars have long disagreed. The topical allocation of such a passage according to one theory of its meaning would inevitably evoke criticism from the scholars of an opposite school.

The solution of this problem was, in part, like that of the special problem of biblical interpretation: the same passage was cited under different topics according to divergent or even conflicting interpretations of it. As in reading biblical texts, well-known traditional interpretations were consulted and often followed.

Here the great books themselves were helpful. Later authors comment on earlier ones. The interpretation of one great author by another was frequently available and was often influential in the syntopical treatment of a particular passage. Even when two or more among the great authors disagreed in interpreting one of their predecessors, it was still possible to follow their divergent readings of the passage by placing it under as many different topics as were suggested by the diverse meanings they assigned to it.

To whatever extent the method of multiple interpretation and allocation was successfully practiced, the references, even to extremely difficult passages, avoided the necessity of choosing between conflicting theories of their meaning. But it cannot be claimed that *all* the recorded interpretations of difficult texts were followed in allocating those passages—not all the interpretations to be found in the great books themselves were used, much less all those which can be found in the voluminous literature of scholarly commentary on the great books. Again, the policy was determined by the primary purpose of the Syntopicon—to serve the general reader of the great books rather than the scholar.

A large number of scholarly interpretations of difficult texts are highly specialized. They often involve an elaborate theory of the whole work and, beyond that, of the mentality of the author. For the Syntopicon to follow such interpretations would only bewilder the general reader. He would find passages cited under topics to which their relevance could not be apparent, because it depended on hidden principles of interpretation.

The controlling principle, therefore, was to place passages only under topics where their relevance would become apparent to the general reader either when he read the passage carefully in the light of the topic, or read it carefully in this light and also in the light of some or all of the other passages cited under that topic. Scholarly interpretations which did not permit the references to conform to this rule had to be ignored.

(3) *The problem of the validity of the great conversation.* The compilation of the references under topics and ideas construes the authors as talking about the same themes, and even as talking to one another about them. In the latter sense, the great conversation is admittedly in part a fiction, since earlier authors cannot actually talk to later ones. Nevertheless, logically, their remarks on a subject often function as comment on or even rejoinders to the remarks of their successors. Though they are chronologically arranged, the references under each topic do not form a straight line but a circle, in which any point may be diametrically opposed to any other. The great conversation does not move irreversibly from past to present, it moves in a circle of thought which partly transcends time.

The assumptions underlying the construction of the references to represent the great conversation have already been stated and defended in this essay. But the issue they raise between the historical and dialectical treatment of ideas deserves further comment here.

In its most extreme form, the position of historical scholarship is that each of the great authors, certainly the greatest among them, somehow managed to create an intellectual world entirely his own – peopled by his own ideas, walled in by the unique systematic ordering which he imposed upon them, and rendered incommunicable with other worlds by his private vocabulary. According to this extreme position, to talk with or listen to one of the great authors on any of the great themes, it is necessary to gain admittance to his world with the keys provided by historical scholarship. The keys are available to anyone who will take the pains to acquire them – to anyone except the great authors themselves who, having constructed their own worlds, insist upon talking and being talked to, each in his own. In one sense, they lock each other out; in another sense, each introduces the others into his own world, but always recreates them in his own image.

According to this view of the history of ideas, a genuine dialectic of ideas is impossible, and the notion of the great conversation is an imposture. The references, which collect the authors under the same topic and present them as relevant to one another as well as to the same theme, does violence to the principles and method of their work by blindly ignoring the innermost secret of their individuality. If the passages cited by the references had been properly interpreted, each according to the special lights of its author, they could not have been placed side by side in this way.

The issue raised by the most extreme form of historical scholarship thus finally comes down to a question whether the passages cited in the references were rightly interpreted. The question cannot be decided simply by reading the passages, for even if they do *appear* to be relevant to one another and to the same topic, the historical scholar who denies the great conversation can always insist that the *appearance* results from a superficial reading, and that the *reality*, discernible only by a deeper understanding of the texts on historical principles, is quite otherwise.

The issue is one of conflicting assumptions—or, perhaps, presumptions. If it is presumptuous, on the part of those who constructed the Syntopicon, to stand outside the great authors in an effort to align them in a conversation and engage them in a dialectic which they themselves did not always explicitly recognize, it may be no less presumptuous, on the part of the extreme exponents of historical scholarship, to isolate the great authors from one another, imprisoning each in his own intellectual world.

No doubt the kind of complete immersion in the work of a single author which the best scholarship often involves, tends to impress one with the unique and incommensurable character of his thought. But the contrary impression can be as readily formed by a dialectical reading of the books. At its best it also involves complete immersion, not in the work of one author, but in the tradition which somehow embraces them all.

Whether a final understanding of the great books would favor the intellectual isolation or communion of their authors—or both—is a question that must be left to any reader who feels competent to make that judgment. The user of the Syntopicon need not make it while in the process of using the Syntopicon. He need only know that the Syntopicon was constructed on dialectical principles, not on the principles of historical scholarship in their most extreme form.

He will then realize that the interpretation of the passages cited in the references was based on the assumption that the books can be read together and can be construed as mutually relevant under many topics, if not under all. Whatever his own final judgment, he will be guided by the knowledge that the creators of the Syntopicon were committed to the policy of trying to see the authors as somehow more in communion than in isolation.

The creators of the Syntopicon acknowledge taking a position on this ultimate issue of interpretation. This does not mean that they were unaware of or undisturbed by the difficulties of applying their principles. The preceding discussion of the construction of the references consists largely of a recital of difficulties, and of the frequent necessity of choosing the less objectionable of two unsatisfactory solutions.

The effort to achieve dialectical comprehensiveness by means of systematic ambiguity in the topics may sometimes have stretched equivocation to the breaking point. In other cases, the margin of equivocation permitted may have been misleadingly and unhelpfully great. In still others, the unity among the authors may have been a thin thread as compared with the bulk of their differences. But all these risks were knowingly undertaken in the interest of showing that the great authors can be read as though in conversation on the same question or topic, even when their positions and language are so disparate that more cautious scholars would hesitate to ascribe unity to the topic, or coherence to the conversation.

The scholars take another sort of risk which the creators of the Syntopicon were unwilling to assume—the risk of asserting that the topics discussed and the questions answered by one author are incommensurable with the topics and questions

considered by another. As between the dialectical unity of the western mind and the historical isolation of its individual geniuses, the true meaning of the intellectual tradition can be discovered only by taking risks of both sorts. Justice must be done to each author as an individual and to his place in the tradition.

THROUGHOUT THE PRECEDING DISCUSSION, the aim has been to assess the virtues and defects of the References, to indicate possible errors of omission and commission and their causes, and to consider the problems of interpretation which could seldom be perfectly solved.

But even if no errors of commission had been made, and no mistakes in interpretation, the References would not represent an adequate comprehension of the contribution of the great authors or the content of their books. The References merely try to indicate what the books have to say on these topics. They undoubtedly have much more to say than can be exhausted by even a complete allocation of their contents under the 3000 topics that were chosen.

The fact that certain authors or books yielded more readily than others to the method of the Syntopicon certainly does not mean that the latter are less rich or meaningful because they are represented by fewer references. These defects and discrepancies naturally resulted from the effort to treat the whole set of books—the whole tradition rather than individual authors and works—as the object of study. Therefore, syntopical reading of the great books as a whole may necessarily be a more or less inadequate reading of each individual book. The one need not be substituted for the other, nor should it be.

There is also inadequacy in the reverse direction. Even if no errors of omission had been made, the References would not represent an adequate discussion of the topics. To take them as such would be to assume that what the great books have to say on these subjects exhausts everything that can be said or even everything that has been said. Many topics of great significance have references collected under them which do less than complete justice to the problems or issues they propose. The Outlines of Topics frequently include questions or themes on which other books especially concerned with these subjects amplify, and in some cases add, often substantially, to what the great books have to say. Therefore, to round out the discussion, a list of Additional Readings at the end of each chapter supplements the References assembled in that chapter.

V. THE ADDITIONAL READINGS

THE WORKS RECOMMENDED were chosen to supplement the works contained in *Great Books of the Western World*. They were selected, for each chapter, to round out the discussion of the idea and topics to which the great books make the principal contribution.

The Additional Readings far from exhaust all the writings which could be listed as relevant to a particular chapter. More than relevance was required. The books chosen for each chapter had to make a significant and substantial

contribution to the discussion of the chapter's idea and topics; and their contribution was largely measured by the degree to which they did not repeat, but rather added to what was said by the great books cited in the References.

Only primary works were considered; that is, no books about books or authors were recommended, only books about the subject matter of the chapter and its topics. This criterion excluded two sorts of books which, in other connections, have much interest and merit: the vast literature of commentary on the great books and their authors, and the equally vast literature of intellectual history—histories of the arts and sciences, of philosophy and religion, and of ideas in general. In a few instances, historical works of this sort were listed because they were not exclusively historical, but also contained some primary discussion of the subject matter of a science.

Earlier in this essay, we considered the criteria underlying the selection of the works included in *Great Books of the Western World*. It was then observed that the distinction between these and some of the extremely important works listed in the Additional Readings expressed a judgment as to which books were *indispensable* for the great conversation and for the liberal education attainable by participation in it. This distinction, like the one between the 102 great ideas and the many other terms listed in the Inventory of Terms, is sometimes difficult to make and to defend. As there are borderline terms which might have been included among the great ideas, so there are borderline books which might have been included among the works published in this set. But, for the most part, the differentiation is clear enough and clearly defensible.

It should be noted at once that the distinction between the works published in this set and the Additional Readings, is a distinction between two groups of books, not two groups of authors. Each list of Additional Readings includes a few authors represented in this set, as well as many authors not represented. Not all the writings of the great authors are published in this set. Some of these are works of importance only for particular ideas, or their topics. These deserve to be recommended just as do similarly limited works by authors not represented in this set.

Since it seemed probable that users of the Syntopicon would develop a special interest in the great authors, the Additional Readings for each chapter were divided into two groups: I. Authors represented in this set; and, II. Authors not so represented.

This separation may prove convenient to the reader who wishes to know whether the authors cited in the References of a given chapter had anything else to say on its topics. There is no difference between the two groups so far as the works themselves are concerned. In both, the titles are of works not published in this set, but recommended because they round out the discussion of a particular idea or some of its topics.

THE CRITERION OF RELEVANCE in selecting the Additional Readings was essentially the same as that employed in constructing the References. But there were differences in its application.

First, the books and passages cited in the References were always judged for their relevance to one topic, never to the idea as a whole or to a large group of topics; whereas the works cited in the Additional Readings of each chapter were judged for their relevance to the idea as a whole. In only a few instances are works recommended because of their importance to the discussion of a particular group of topics. Most of the works cited in the Additional Readings are recommended for their relevance to the whole idea or to almost the whole range of its topics. It was not practicable to indicate that a recommended work had a limited relevance to particular topics. The user of the Syntopicon must discover this for himself. Sometimes the wording of a title reveals its direct bearing on certain topics.

Secondly, in the references to the great books, the usual citation is a short passage; whole books or large divisions of them are cited much less frequently. In the Additional Readings, the usual citation is a whole book; references to large divisions are much less frequent, and to short passages, still less so.

However, in both the References and the Additional Readings, some of the materials have discursive relevance and some have exemplary relevance. The Additional Readings include autobiographies, histories, and works of poetry or fiction--novels and plays--as well as essays and scientific, philosophical, and theological treatises. They even include lyric poems, which have the same sort of relevance as the sonnets of Shakespeare and the shorter poems of Milton in the set. For example, as a certain sequence of Shakespeare's sonnets is relevant to the ideas of LOVE and TIME, Wordsworth's *Ode to Duty* and his *Ode on the Intimations of Immortality* are relevant to DUTY and IMMORTALITY. The only difference is that the sonnets of Shakespeare were cited under particular topics, whereas the two odes of Wordsworth were cited for the whole ideas.

THE PREPARATION OF BIBLIOGRAPHIES or reading lists on particular subjects is usually the work of specialists in those fields. Unlike the selection of the great books, which is properly the task of those concerned with general or liberal education, the selection of readings on specific subjects should be guided by those who are expert in some specialized field of learning or research. While the Board of Editors could take full responsibility for the contents of *Great Books of the Western World*, the editors of *The Great Ideas* could not assume a like responsibility for the contents of its 102 reading lists.

They therefore obtained the help of experts by the following procedure: they constructed tentative lists of readings for each chapter, and sent these to specialists in various fields for criticism and emendation, asking them to recommend titles not listed, and to suggest the deletion of titles not worthy of inclusion.

The editors are grateful to the scholars who so generously contributed their time and effort to this part of the project, and substantially improved the lists by their recommendations. But these recommendations could not be taken as finally decisive. Many of the lists were sent to two or more specialists who, as might be expected, disagreed on a certain number of items. It was necessary for the editors to decide in such cases of conflict.

Furthermore, it was impossible to ask a large number of scholars to check all the 102 reading lists. At most they could be asked to examine a small number of them. Yet it was desirable to obtain a certain degree of consistency for all the lists. Therefore, some effort had to be made to see that the same principles of selection were applied uniformly to all 102 lists. This was done by a small number of consultants, who reviewed and revised the complete set of reading lists, each consultant considering all lists from the standpoint of some particular type of book—such as poetical works, historical works, mathematical and scientific works, philosophical and theological works.

Finally, neither the specialists who gave advice on books in particular fields nor the consultants who examined all the lists could be expected to understand fully the precise purpose the Additional Readings were intended to perform in the Syntopicon. For this, they would have had to study the Outlines of Topics, and also to know the range of the references under each topic. To make the Additional Readings supplement the References, chapter by chapter, it was necessary to know on what points and in what way the discussion of each idea and its topics needed to be amplified.

Since work on the References was in process at the same time that the Additional Readings were being constructed, such knowledge was neither available nor easily communicable. The final judgment on the content of the Additional Readings had to be left, therefore, to the editors of *The Great Ideas*. In the last two years of work on the Syntopicon, they revised the lists which had been constructed and corrected during the preceding years. They had to assume responsibility for whatever errors of omission or commission the lists contained.

A FEW WORDS SHOULD BE ADDED HERE to account for what scholars and specialists are likely to regard as errors of omission or commission. As the Syntopicon was designed primarily for use by the general reader, so also were the Additional Readings. Consequently, certain things were intentionally omitted, though their importance and relevance could be reasonably defended.

In many fields, there is a vast periodical literature of important essays, articles, research reports, and monographs. Such literature is generally not available to the general reader, who is limited to what can be found in bookstores or in local public libraries, and seldom has access to the great collections of a few university libraries or a few public libraries of national standing. Furthermore, the monographs and papers which appear in the learned journals are usually extremely technical, and their contribution to the discussion of a subject is usually narrow and specific rather than broad and general. For these reasons, no periodical literature was included in the Additional Readings, except in the few cases in which papers or essays, first published in learned journals, were later collected and published as books; and then only if these papers were not too narrow in their significance.

For similar reasons, the effort was made to cite only books written in English or translated into English, though here there were more exceptions to the rule.

In every case, the exceptions had to be justified on the ground that the untranslated work was of such crucial importance or such unique significance that the discussion of the subject would suffer substantially from its omission. This is especially true of the literature of antiquity and the Middle Ages, some of whose basic works are not yet translated.

To the reader with no foreign language at his command, the inclusion of these titles is a recommendation which is now only instructive, but may become useful at some future date. It can be hoped that works not yet translated at the time of publishing the Syntopicon will progressively become available in English.

The same general policy was followed in the case of works out of print and not available in any except a few public or university libraries. It seemed purposeless to recommend to the general reader titles he could not procure in some edition, either at bookstores or public libraries. Yet here as before a certain number of exceptions were made, on the ground that the particular title was of extraordinary value. Since such works may once again become available through the publication of new editions, these recommendations may also have some future usefulness.

The chief criticisms of errors of commission are likely to be directed by scholars against some of the contemporary works included in the reading lists, *i.e.*, mainly works published in the last five or ten years; to a less extent, all works published in this century.

Except for Freud's later writings, this set of great books contains no works published in the twentieth century. The reason is not that no great books have been written in this century. Rather it is that not enough time has yet elapsed to give anyone the necessary detachment and perspective to decide which contemporary books belong with the great books of the past. The factor of recency is responsible for considerable controversy over which books of the nineteenth century deserve to be classified as great, and it is generally much easier to get a judgment approaching unanimity concerning the great books of antiquity and the Middle Ages than those of modern times.

For the same reason, the contemporary works listed in the Additional Readings are more likely to be criticized than all the rest. It is much more difficult to assess their contribution or estimate their importance accurately. When a sound judgment can be formed about them, some will certainly turn out to have been overestimated.

At the risk of such errors of commission, a deliberate effort was made to include in the reading lists as many contemporary books as possible. This seemed desirable because *Great Books of the Western World* stops short of this century, and also in order to give concrete evidence that all of the ideas and many of the themes of the great conversation are subjects of inquiry and discussion by the most active minds of our own day. That some contemporary books are recommended which may ultimately be judged unworthy, seemed on the whole less of a disservice to the user of the Syntopicon than would be the omission of these books. In trying to include the most recent publications, the Additional Readings in some chapters cite original works published as late as 1950.

INVENTORY OF TERMS

INVENTORY OF TERMS

The Inventory of Terms is designed to facilitate the use of the Syntopicon as a reference book. By means of the terms here listed in alphabetical order, it directs the reader to the relevant topics in the 102 chapters, and thus enables him to discover what the great books have to say on the 3000 topics which represent the themes of the great conversation. The titles of the 102 chapters are included in this alphabetical list because each of the great ideas is also a term in topics of chapters other than the one devoted to its consideration.

In order to see the particular topic in the context of related topics, the reader should turn first to the Outline of Topics in which the particular topic occurs. Immediately following the Inventory (p. 1346), a table lists the pages in Volumes I and II of *The Great Ideas* on which each Outline of Topics appears. The Outline of Topics in each chapter directs the reader to the pages of its Reference section where the particular topic is treated.

EACH TERM IN THE INVENTORY is accompanied by references to the chapters and topics in which it is a significant element. The terms are the words or phrases printed in bold face type. Whole chapters are cited by both chapter number and name; for example, *see* CH 4: ART. Individual topics are cited by the name of the chapter and the number of the topic in the Outline of Topics of that chapter; for example, *see* ART 5a.

In each entry, topics are cited in the alphabetical order of the chapters in which they appear. However, whole chapters, when cited, always precede individual topics. In some entries, the citations are divided into two groups, those of primary and those of secondary significance. The first group is separated from the second by a diagonal line.

SOME WORDS CARRY A QUALIFIER in parentheses to indicate the sense in which they are being used. For example, **Balance** (*phys.*) stands for the term *balance* as used in physics; **Crisis** (*med.*) stands for the term *crisis* as used in medicine. When the same word is used in two or more senses, qualifiers indicate the distinct terms it represents. For example, **Function** (*biol.*) stands for the term *function* as it is used in biology, and **Function** (*math.*) stands for the term *function* as it is used in mathematics.

Terms which are the names of particular sciences, such as logic or biology, may be related to topics which treat the nature of the science itself, or they may be related to topics concerned with the subject matter of that science. The words "science of" or "subject matter of," following words like "logic" and "biology," indicate which sort of topic is being cited. For a small number of such words, the qualifying phrase is not needed to determine the meaning.

Phrases are sometimes necessary to express a single term or to make its meaning definite; for example, **Law of contradiction**, **Military strategy and tactics**. The same purpose is served by pairing related or similar words; for example, **Appearance and reality**, **Franchise or suffrage**, and **History, historian**.

FOR COMMENT ON THE USE of the Inventory of Terms, see the Preface (Vol. I, pp. xviii-xx); and for the general principles and methods of its construction, see Appendix II (Vol. II, pp. 1225-1228).
